

# **Interaction Design**

Chapter 1 (April 18, 2012, 9am-12pm):

**History**

# History

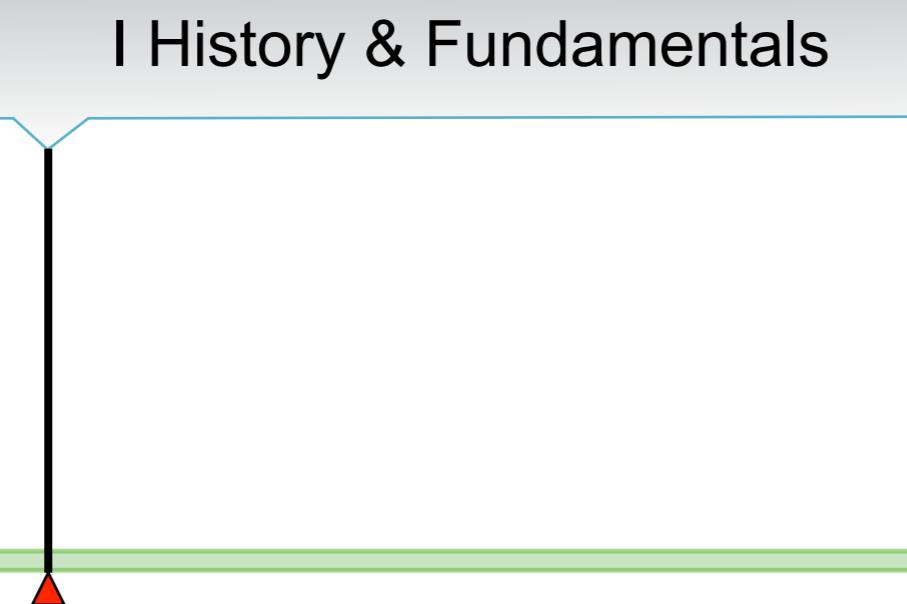

- Course Overview (Timetable) + Organizational Stuff
- What is Interaction Design?
- The Story of the Mouse
- PARC
- The Desktop Metaphor
- The GUI

## Tutorials & Exam

- **Interaction Design** required for Concept Development
- no Podcast, so be here every week :)
- register via Uniworx!
  
- **tutorials** close to the lecture
- practical exercises to apply theoretical knowledge
- important preparation for the exam
- will be held in breakout sessions during the lecture
- sometimes a bit homework possible
  
- **Bonus** of 5% in exam possible if you hand in deliverable at the end
- documentation of breakout sessions and homework
  
- **Written Exam** will be announced on the website shortly
- exact time and location will be announced soon

## Course Overview:

## Looking back...

- shaping our lives through digital artifacts...
- good IxD refers to a “mental model”
- good IxD provides a “map” of where you are in a system, how you can move around and how you get back to the point where you started
- languages of interaction design
- elements of interaction design
- the part of the interaction designer is to design the **quality** on how the interaction is performed, how the system behaves

# Designing for Everyday Life

source: [3]

**"Great design is as much about prospecting in the past as it is about inventing the future."**

**Bill Buxton**

source: [6]

**Douglas C. Engelbart : Augmenting human intellect: A Conceptual Framework**  
*Stanford Research Institute (SRI), 1962.*

- 1. Artifacts**—physical objects designed to provide for human comfort, the manipulation of things or materials, and the manipulation of symbols.
- 2. Language**—the way in which the individual classifies the picture of his world into the concepts that his mind uses to model that world, and the symbols that he attaches to those concepts and uses in consciously manipulating the concepts (“thinking”).
- 3. Methodology**—the methods, procedures, and strategies with which an individual organizes his goal-centered (problem-solving) activity.
- 4. Training**—the conditioning needed by the individual to bring his skills in using augmentation means 1, 2, and 3 to the point where they are operationally effective.

**The system we wish to improve can thus be visualized as comprising a trained human being, together with his artifacts, language, and methodology.**

founded 1970 by Xerox

founded 1970 by Xerox

<http://de.academic.ru/pictures/dewiki/80/Parcentrance.jpg>

## **Stu Card**

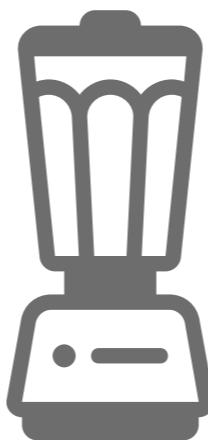

- joined Xerox Palo Alto Research Center (PARC) in 1974
- aimed at perfecting scientific methods to integrate with creative design
- developed a process to predict the behavior of a proposed design, using task analysis, approximation, and calculation
- proposed a partnership between designers and scientists, by providing a science that supports design.

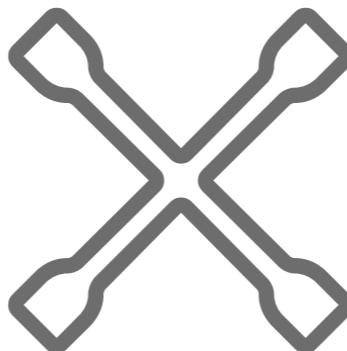

## Looking back...

-exploration of the design space through the integration of industrial design

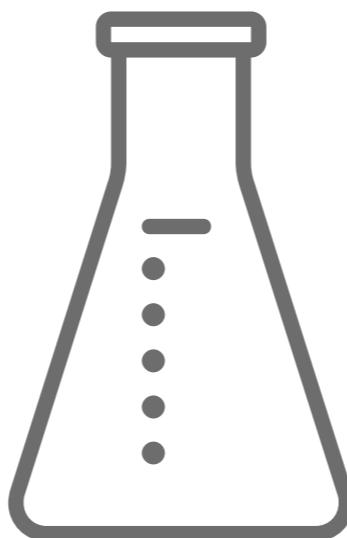

## Looking back...

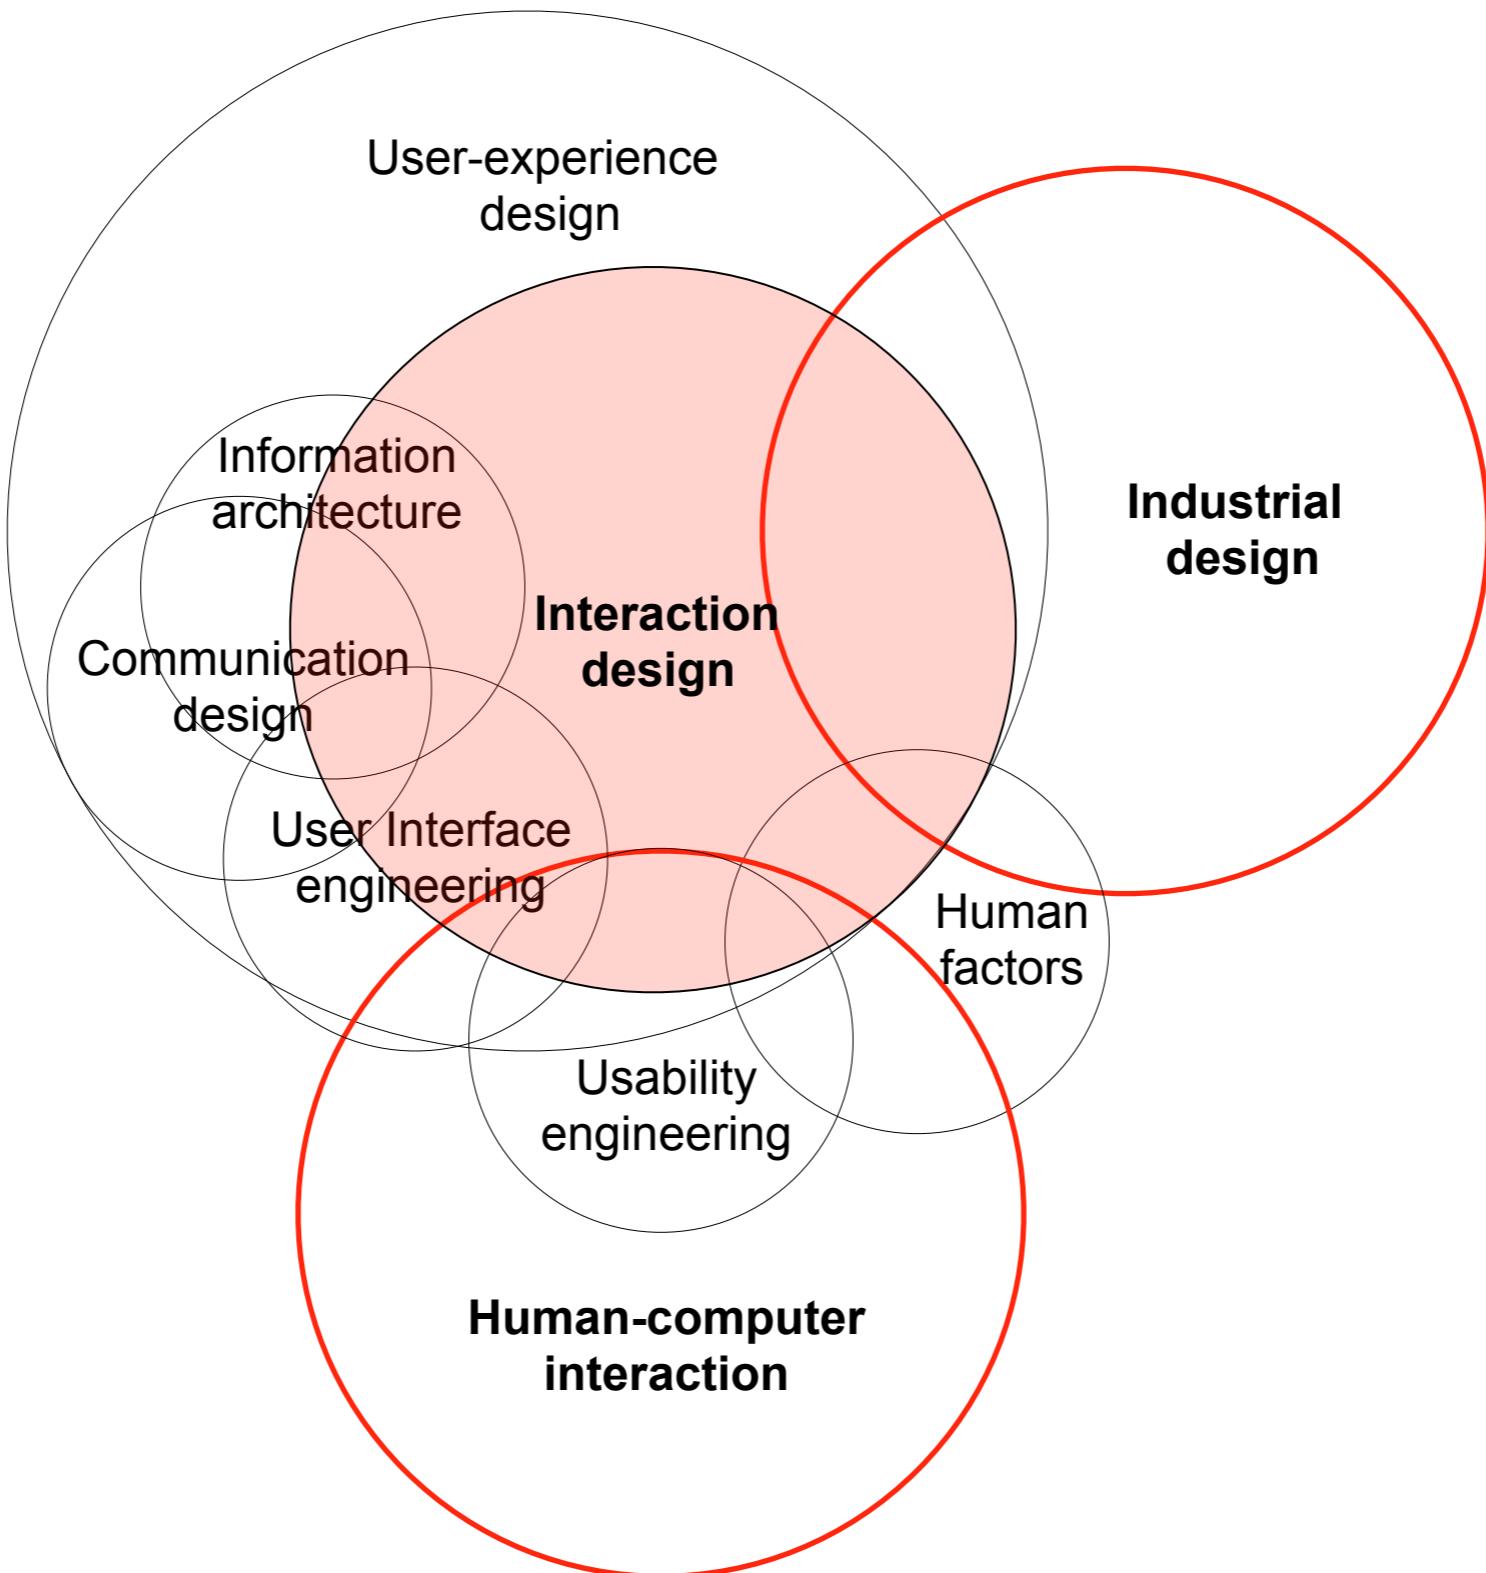

- exploration of the design space through the integration of industrial design
- designers and engineers had to work together (interdisciplinary approach)

## Looking back...

- exploration of the design space through the integration of industrial design
- designers and engineers had to work together (interdisciplinary approach)
- science served to constrain the design space

# Xerox Alto 1973

[http://dl.maximumpc.com/galleries/25oldpcs/xerox\\_alto\\_front\\_full.jpg](http://dl.maximumpc.com/galleries/25oldpcs/xerox_alto_front_full.jpg)

This screen shot of an early Alto illustrates its advanced graphics capabilities.  
Courtesy of Robert Garner

The Xerox Alto boasted the world's first "what you see is what you get" (WYSIWYG) editor, mouse, graphical user interface (GUI) and bit-mapped display. Its pop-up menu interface became the model for the Microsoft® Windows® and Apple Macintosh® interfaces of today.

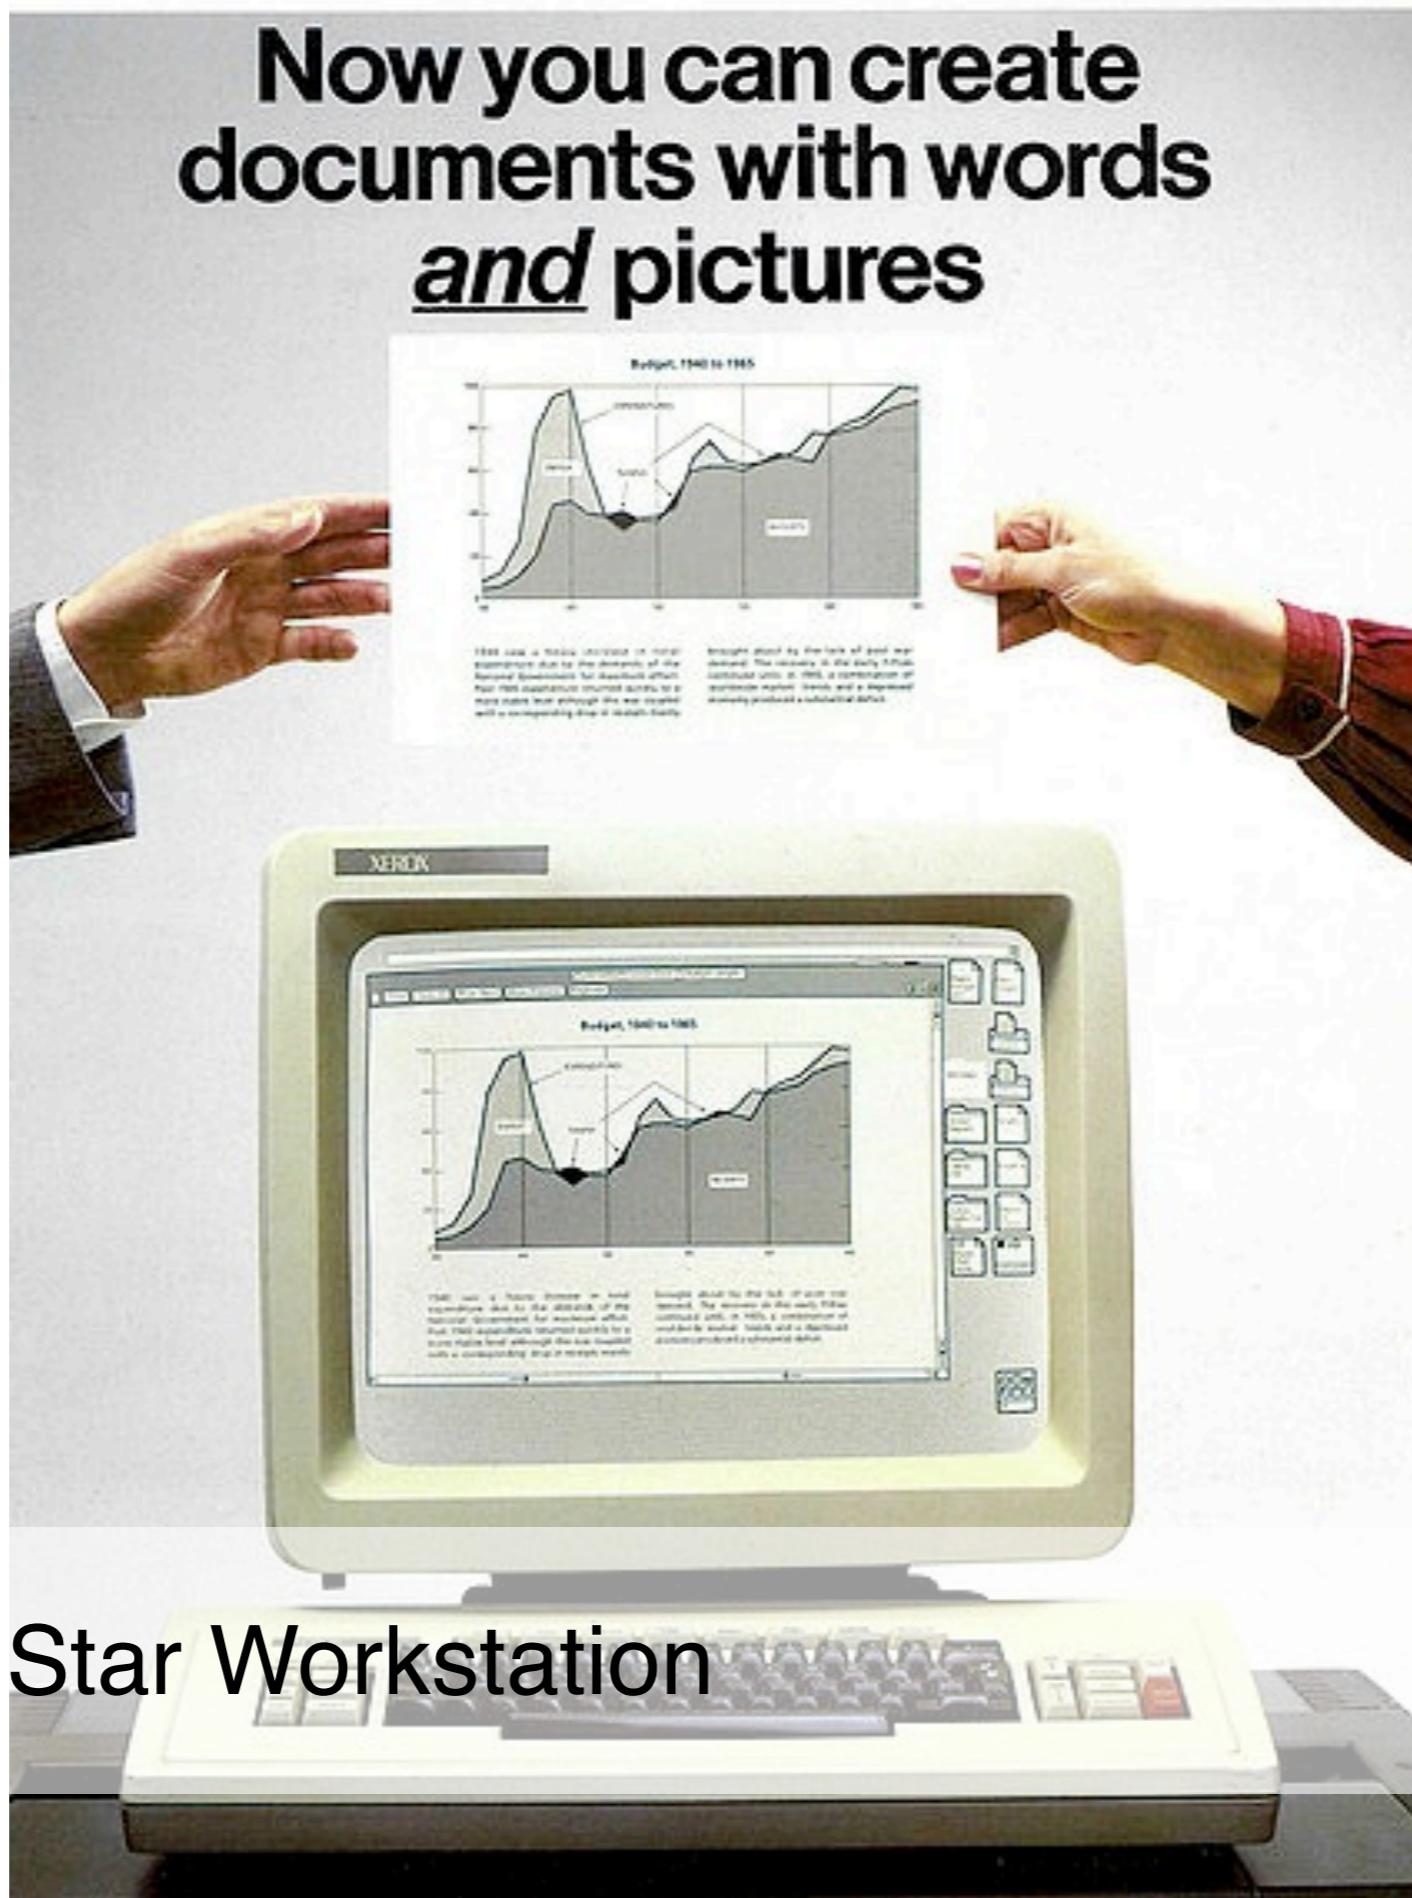

From the collection of The Computer Museum History Center

**"There is no reason anyone would want  
a computer in their home."**

**Ken Olson,  
president, chairman and founder of DEC, 1977**

# XEROX 6085 Workstation

## User-Interface Design

To make it easy to compose text and graphics, to do electronic filing, printing, and mailing all at the same workstation, requires a revolutionary user-interface design.

**Bit-mapped display** - Each of the pixels on the 19" screen is mapped to a bit in memory; thus, arbitrarily complex images can be displayed. The 6085 displays all fonts and graphics as they will be printed. In addition, familiar office objects such as documents, folders, file drawers and in-baskets are portrayed as recognizable images.

**The mouse** - A unique pointing device that allows the user to quickly select any text, graphic or office object on the display.

## See and Paint

All functions are visible to the user on the keyboard or on the screen. The user does filing and retrieval by pointing them with the mouse and touching the **MOVE**, **COPY**, **DELETE** or **PROPERTIES** command keys. Text and graphics are edited with the same keys.

# 1981 Xerox Star Workstation Interface

Experience at Xerox with prototype workstations has shown shorter production times and thus lower costs, as a function of the percentage of use of the workstations. The following equation can be used to express this:

YEAR	PERCENTAGE	USE
1978	45.2	15.4
1980	41.1	58.3
1982	45	55
1984	30	70
1986	18	90
1988	5	75

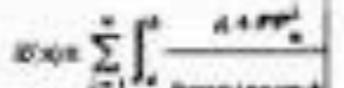

Table 1: Percentages of use of methods.

## Activity under the old and the new methods

0 20 100

Figure 1: Data from Table 1: Drive

Workstation usage percentages  
Table 1 and illustrated in Figure 1. 6085 users are likely to do the composition and layout, creation process including printing and distribution.

## Text and Graphics

To replace typesetting, the 6085 offers a choice of typefaces and sizes from 6 point to 26 point.

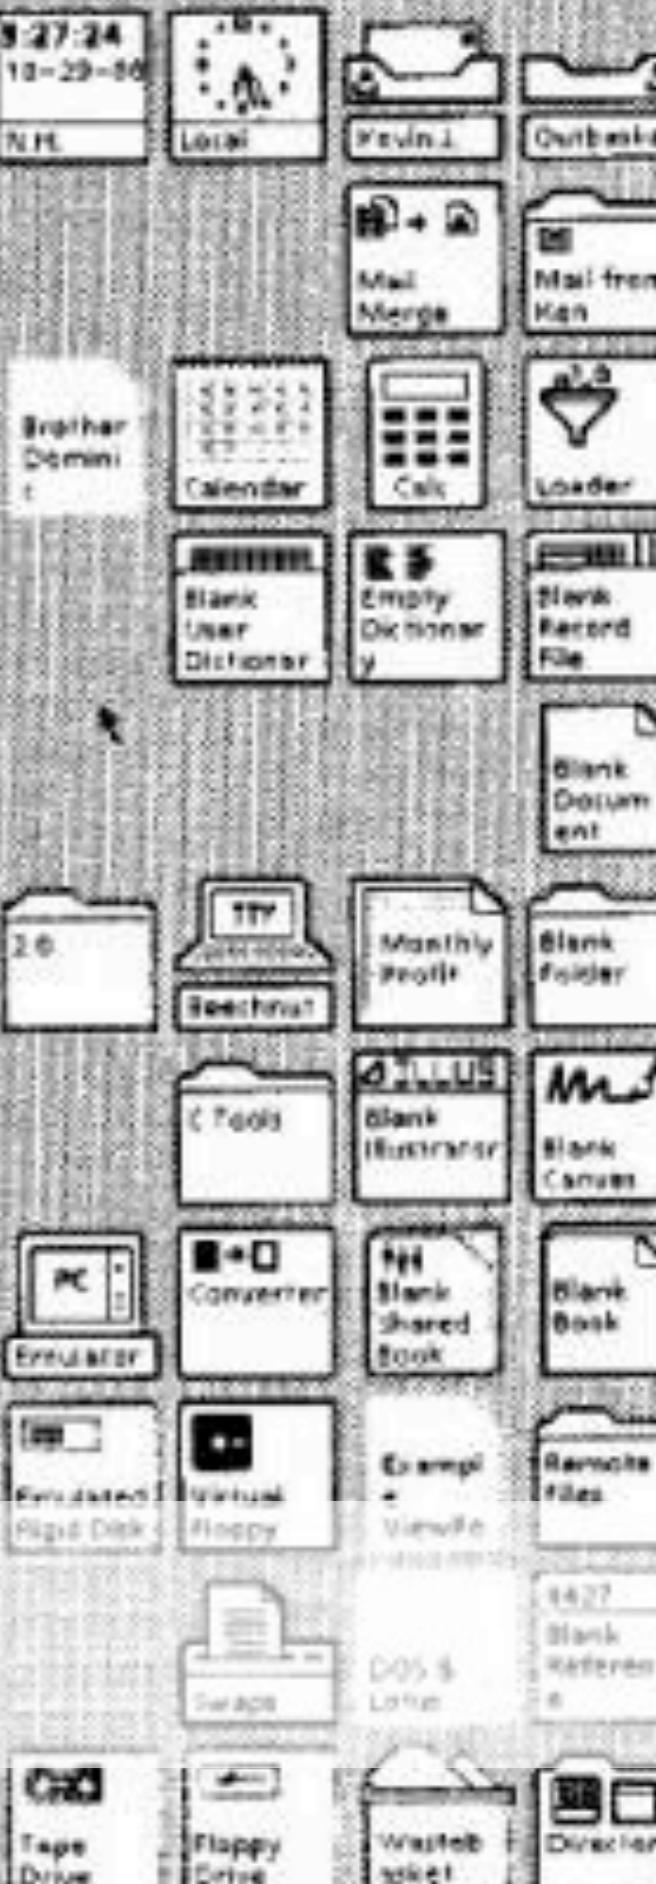

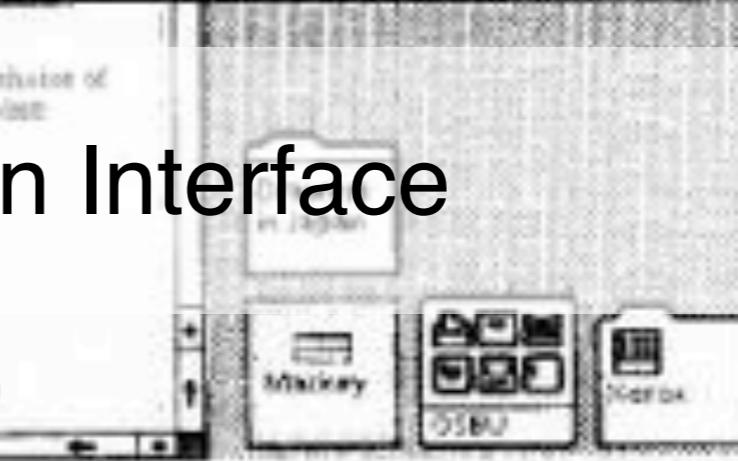

18-point text.

24-point text.

36-point text.

NAME	EXTENSION	SIZE	DATE
COMMAND	COM	22677	15-1-85
AND	SYS	2894	18-3-85
ASSIGN	COM	964	29-7-85

# History

- Course Overview (Timetable) + Organizational Stuff
- What is Interaction Design?
- The Story of the Mouse
- PARC
- The Desktop Metaphor
- The GUI

## **Larry Tesler**

- involved users also in the software design process
- joined PARC in 1973
- moved to Apple in 1980
- was the core designer of Apples “Lisa” computer
- invented the “copy and paste” function

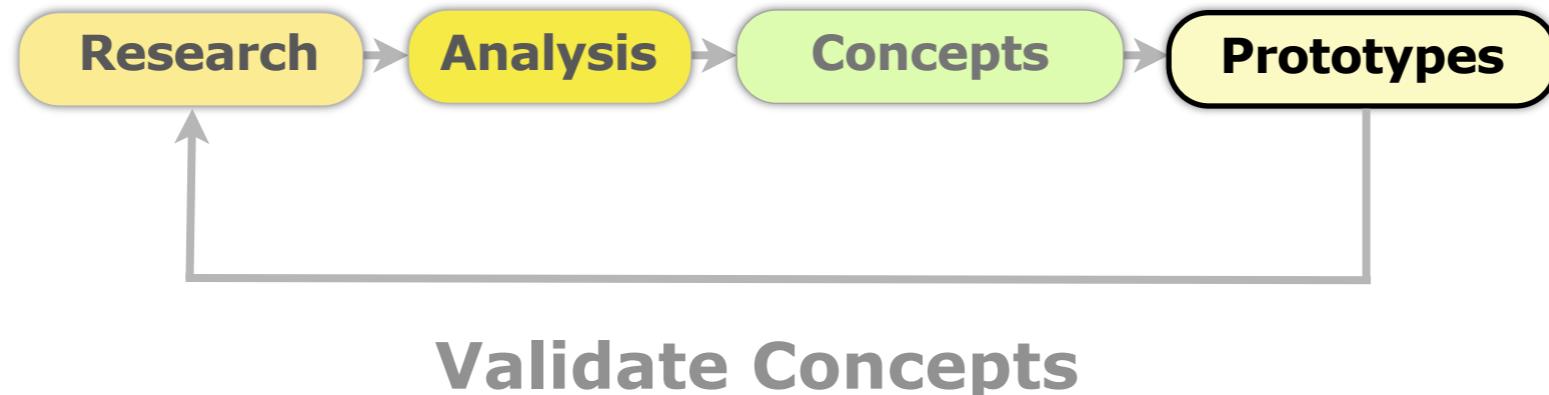

### Text Selection

So it became a kind of contest. An unofficial and completely unacknowledged competition to see which of us was the toughest, the coolest, the hardest to get. (He was, but there were times when he didn't know that.) **Who is smarter, you or me?** he asked me again and again: once as he left the apartment in the morning, me wrapped in a towel; once over our whiskies at the King Cole Bar in the St. Regis. And that became the most important question.

## Looking back...

-brainstorming and iterative trying and testing (iterative design process)

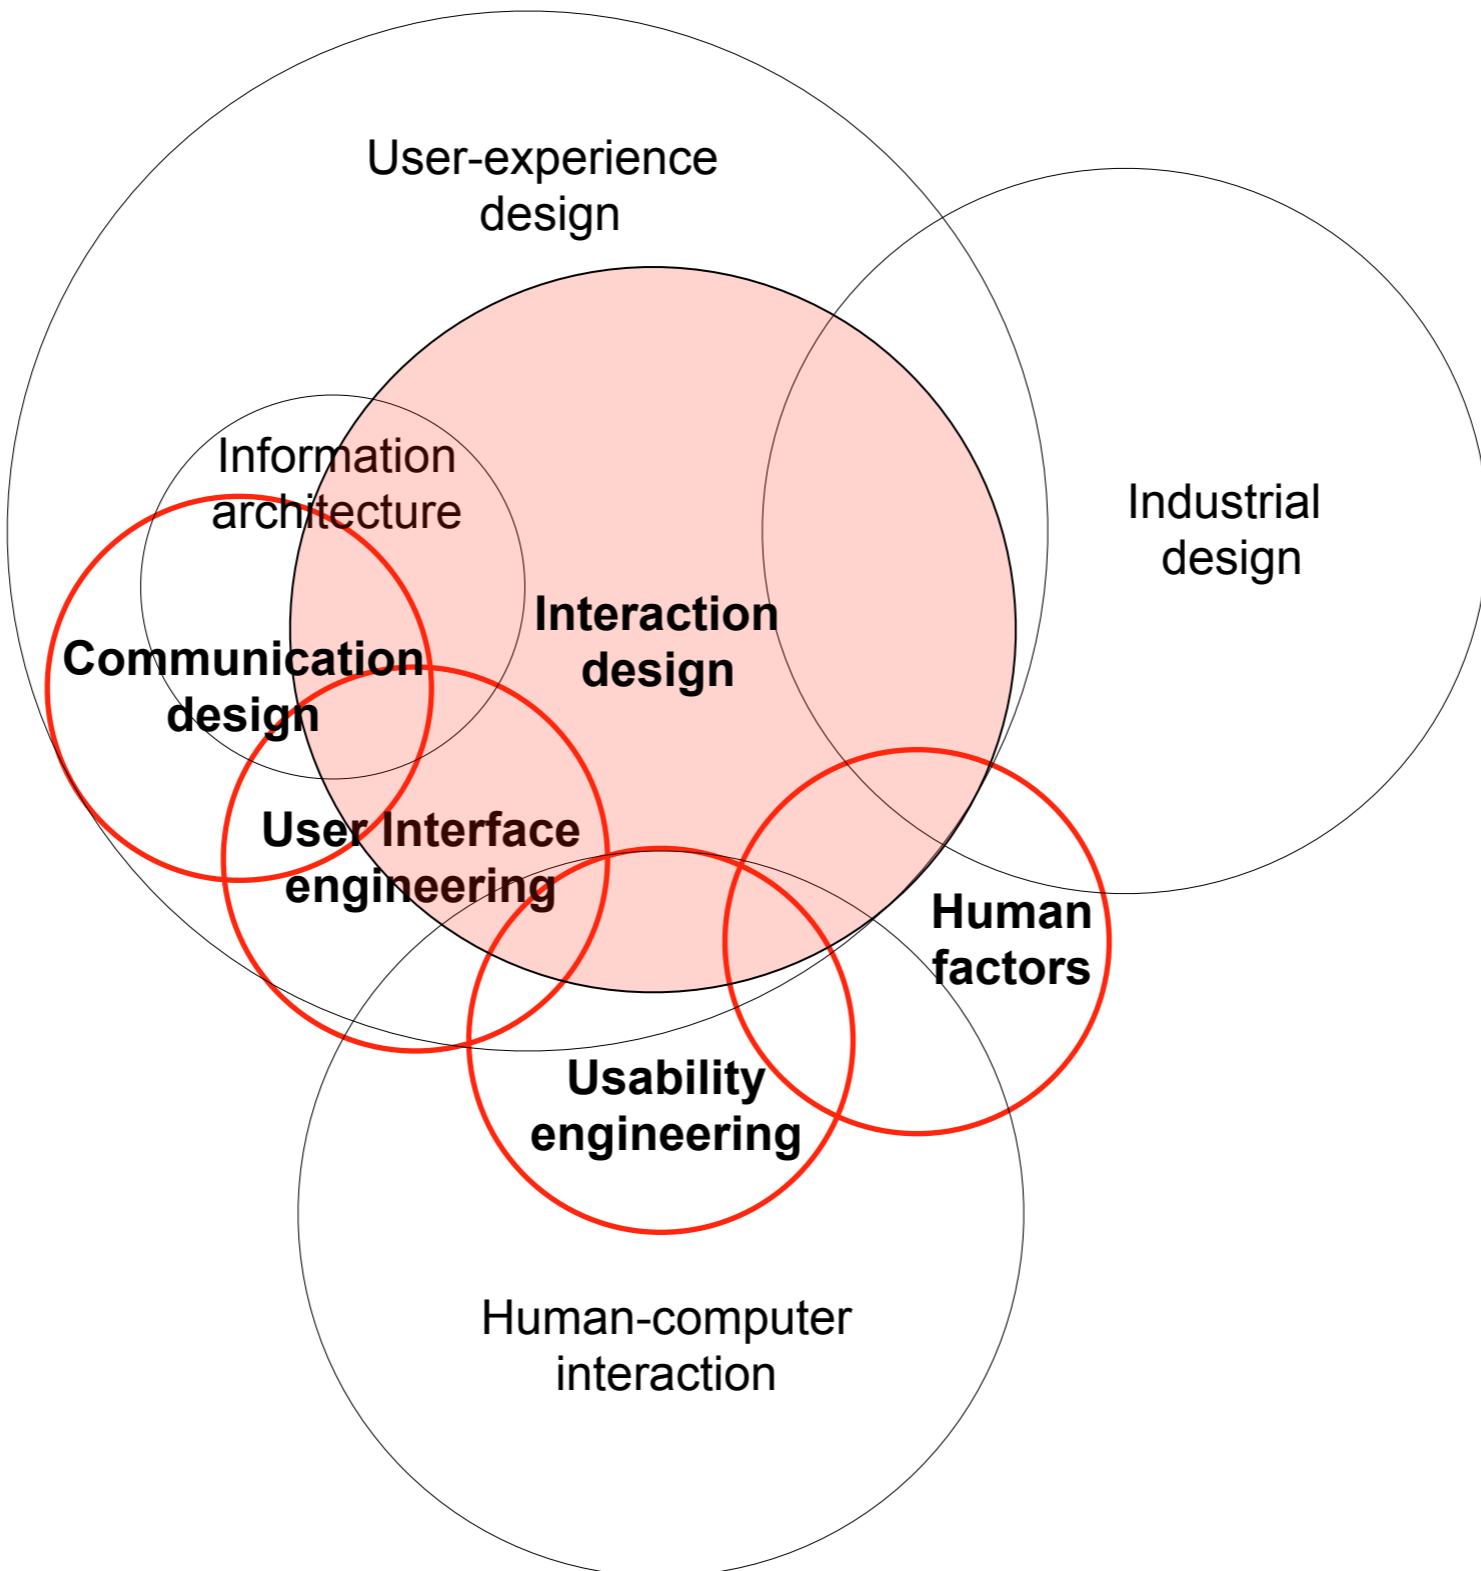

## Looking back...

- brainstorming and iterative trying and testing (iterative design process)
- constant, quick and efficient tests with users to improve the system  
(experience prototyping)

## **Looking back...**

- brainstorming and iterative trying and testing (iterative design process)
- constant, quick and efficient tests with users to improve the system  
(experience prototyping)
- developing products for the users' core needs (user centered design process)

## **Bill Atkinson**

- was hired by Apple as the “Application Software Department”
- invented the “pull down” menu structure
- was the lead designer of the “Lisa” and the initial “Mac”

## **Looking back...**

- alternative designs in a variety (sketches & prototypes)
- proposal of a participatory design approach, creating better UIs

## WIMP

- stands for "window, icon, menu, pointing device"
- coined by Merzouga Wilberts in 1980
- is often incorrectly used as an approximate synonym of "GUI".

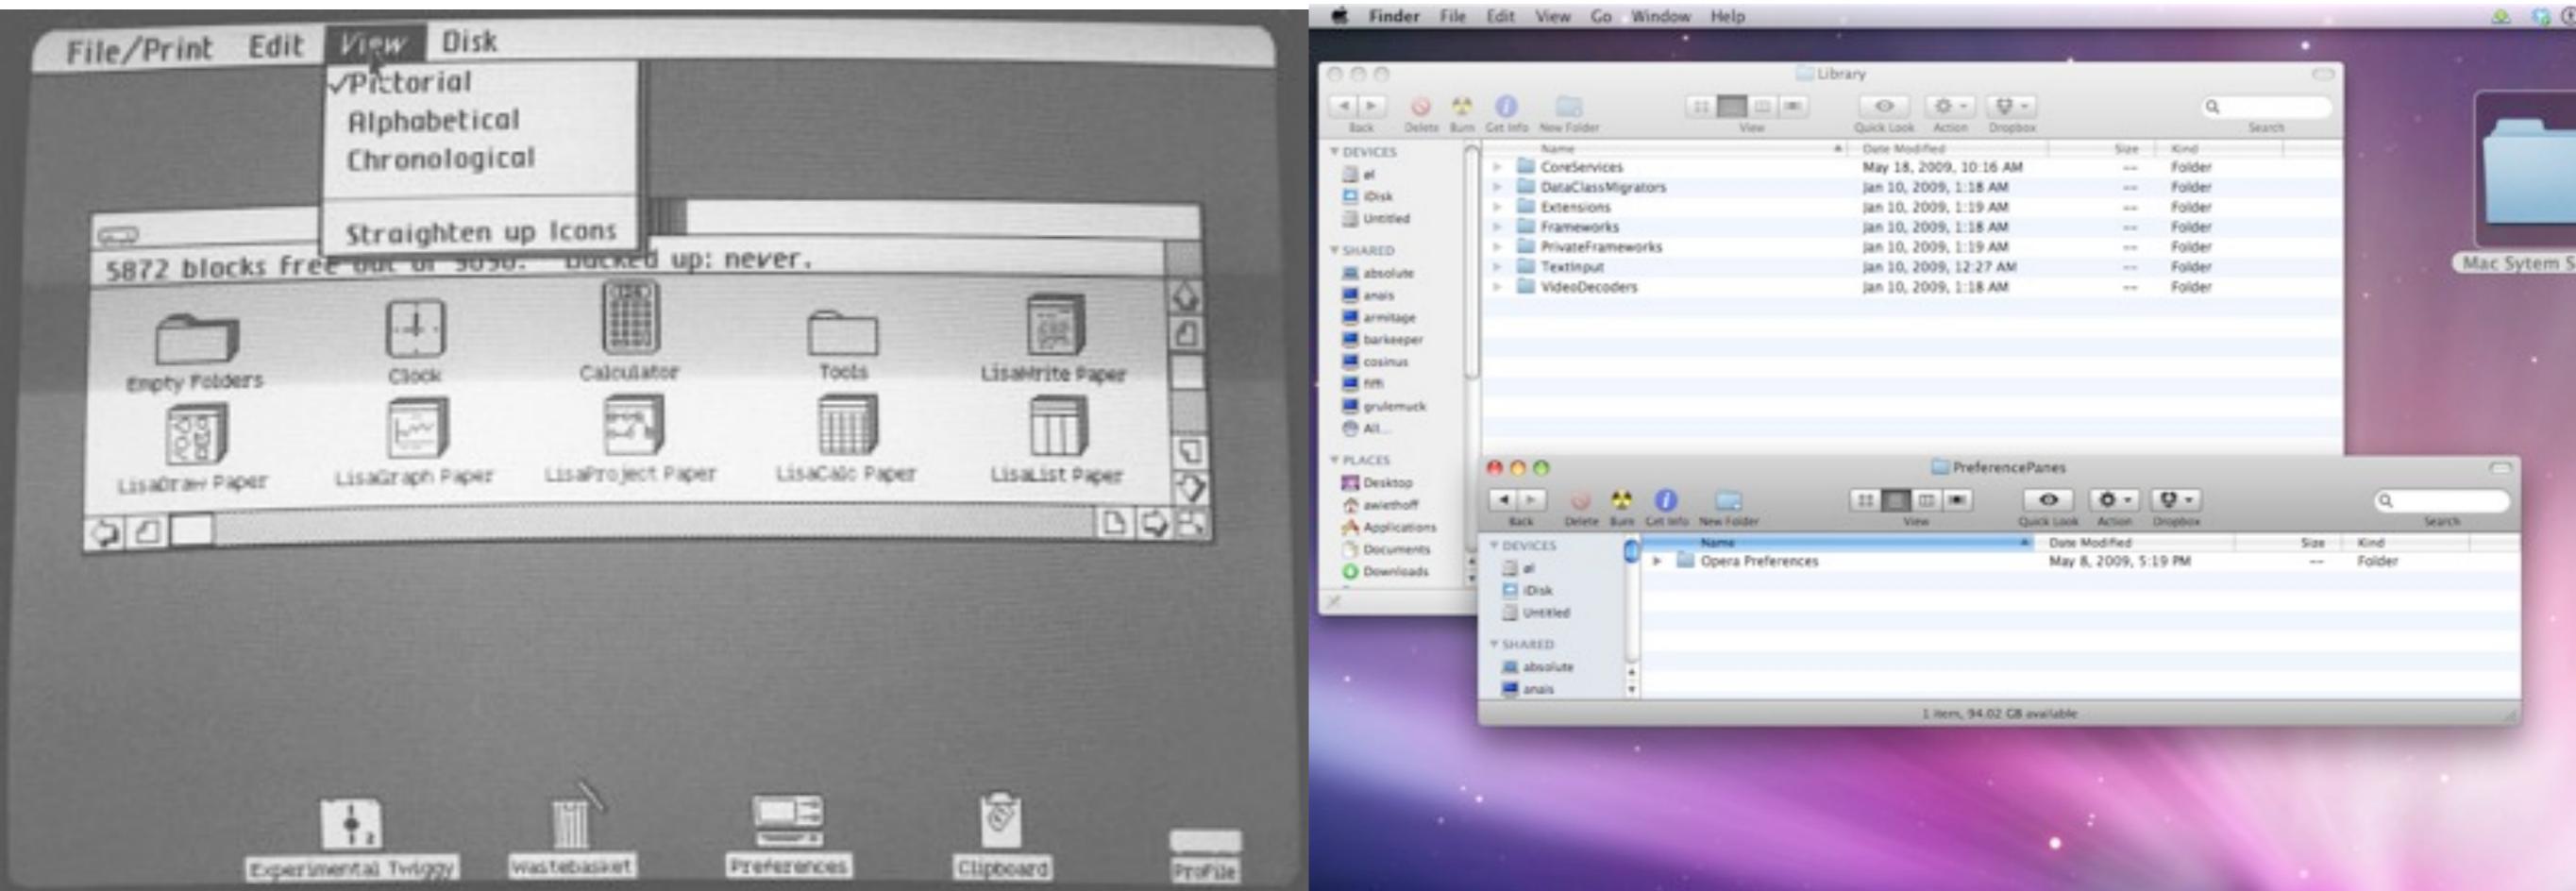

# WYSIWYG

- user interface that allows the user to view something very similar to the end result  
-implies the ability to directly manipulate the layout of a document/presentation/3D model without having to type or remember names of layout commands.

October 2007: Mac OS X 10.5

over 25 years in between....

# INTERACTION DESIGN

photo credits © bill verplank

“There is an objectivity in the process of letting the user decide, the value of which is a recurring theme in this story of designing the desktop and the mouse. **Come up with an idea, build a prototype, and try it on the intended users.** That has proved, time and time again, to be the best way to create innovative solutions.”

**Bill Moggridge - Designing Interactions**
