

Media Informatics Group ▪ Florian Schulz

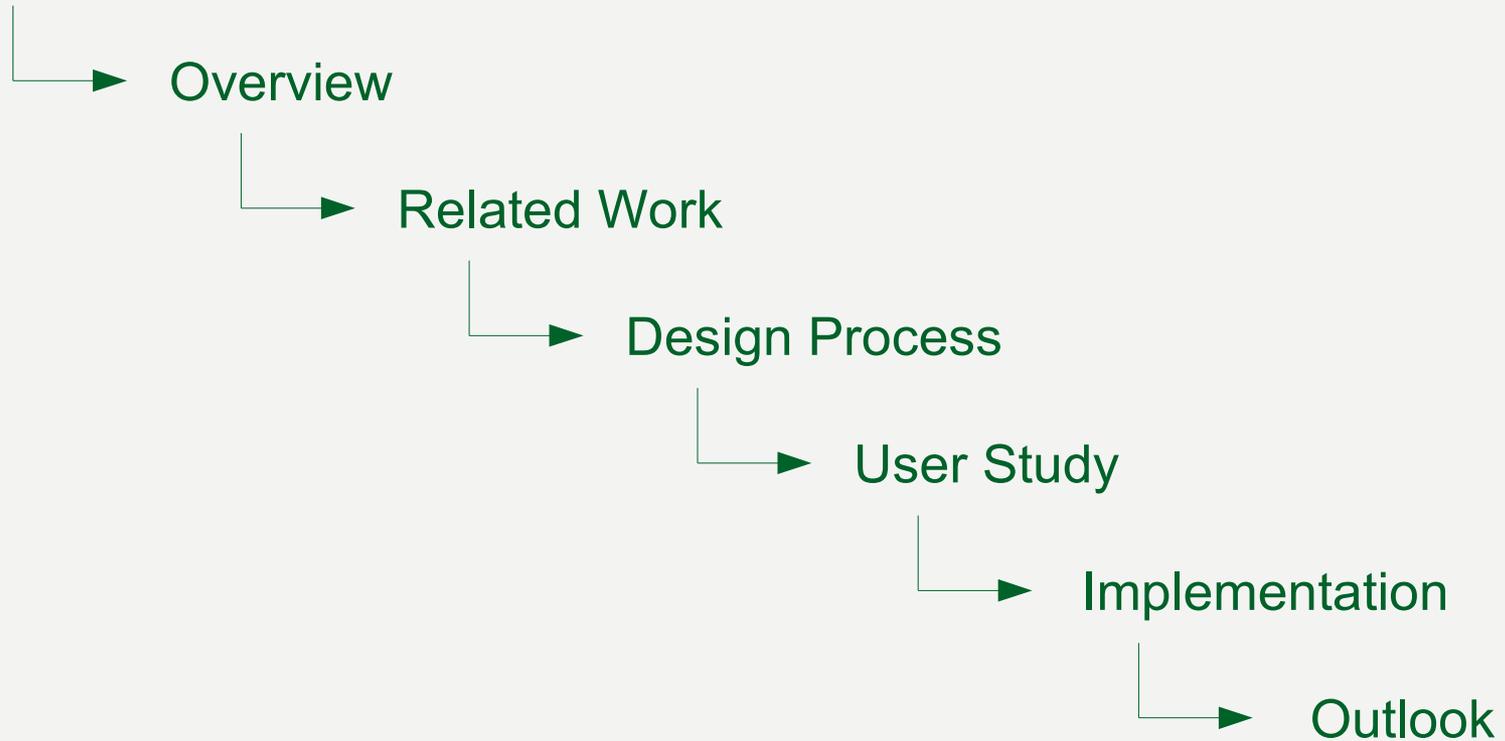

Design and Implementation of a Curved Multi-Touch Desktop

Supervisor: Dipl. Medieninf. Raphael Wimmer
Responsible Professor: Prof. Dr. Heinrich Hußmann

Motivation

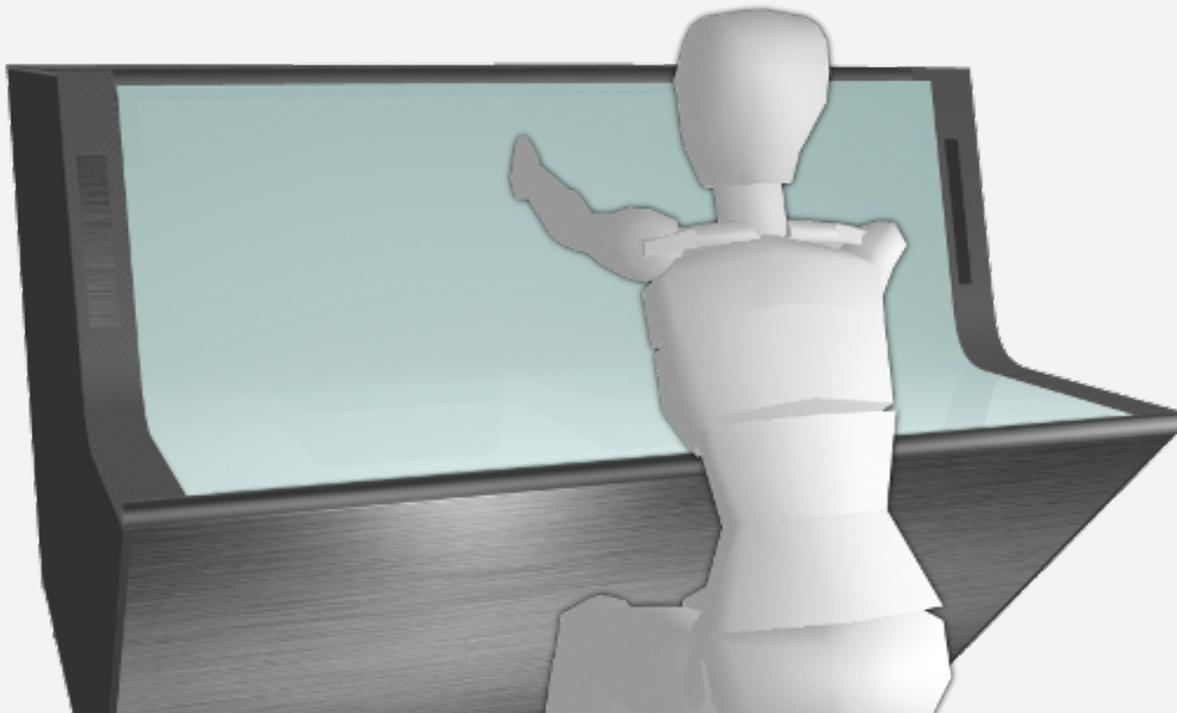

used to work on
vertical screens

some tasks better
done on horizontal
surfaces

connection of both
might enhance the
users' work-flow

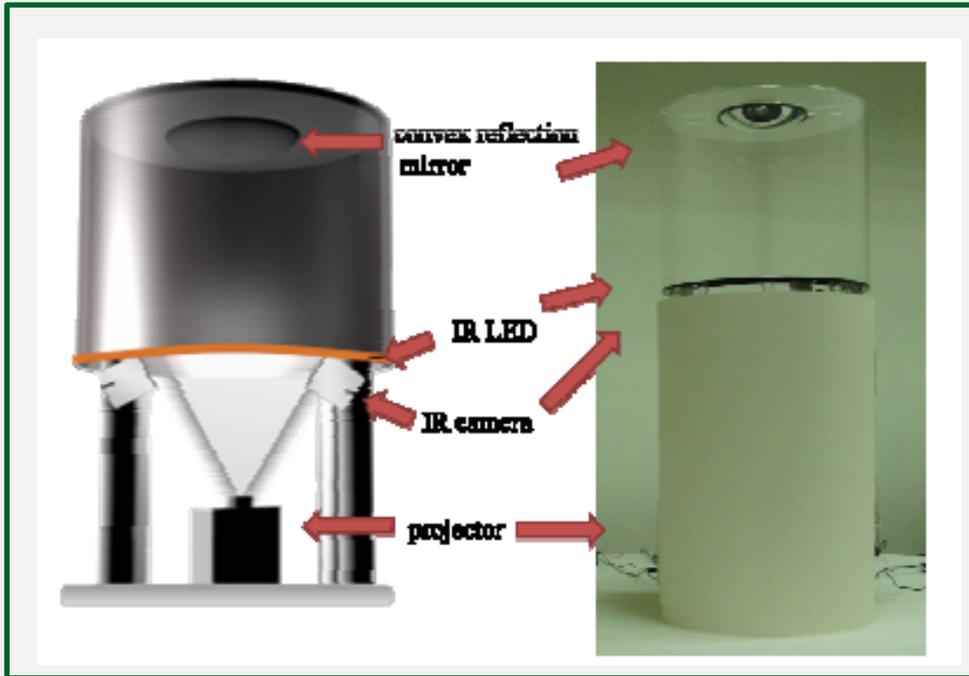

- | curved interactive display with multi-modal input
- | combining horizontal and vertical interactive surfaces
- | application area: everyday (office) work

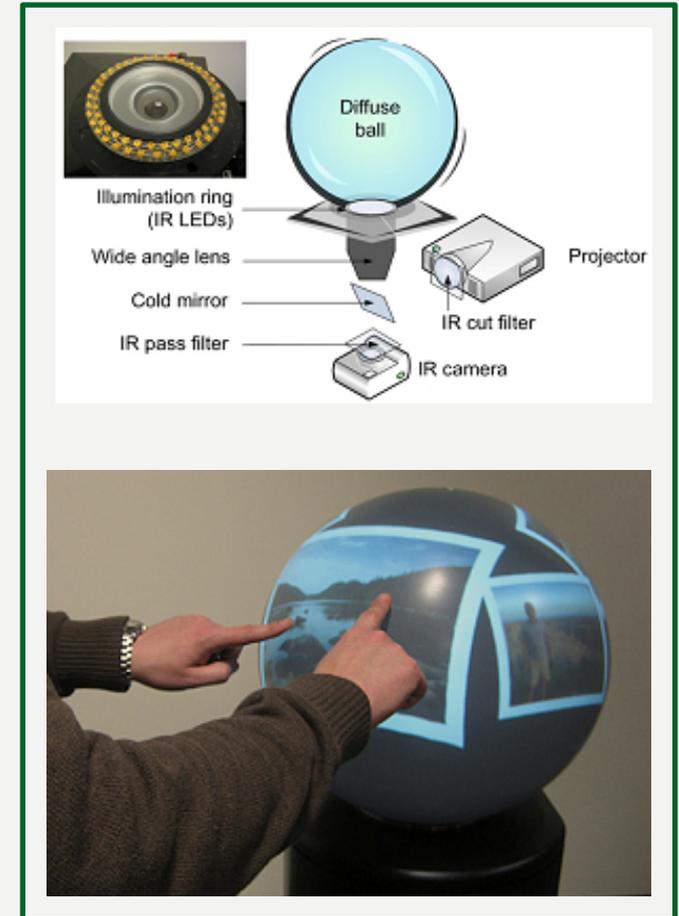

i-m-Tube

BendDesk

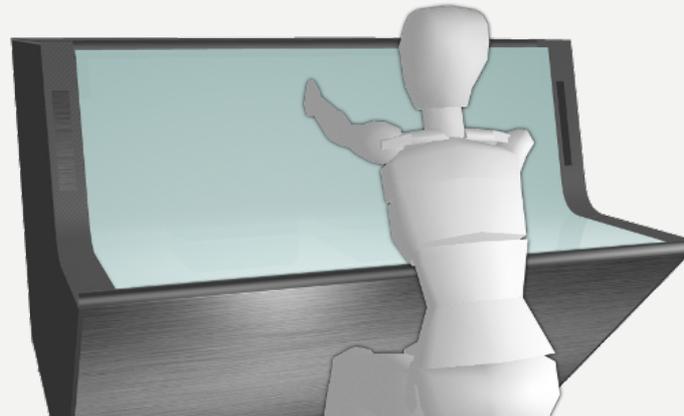

First Drawing

→ Expert Discussion:

- | too high
- | no inclination
- | general challenge of vertical (touch) display

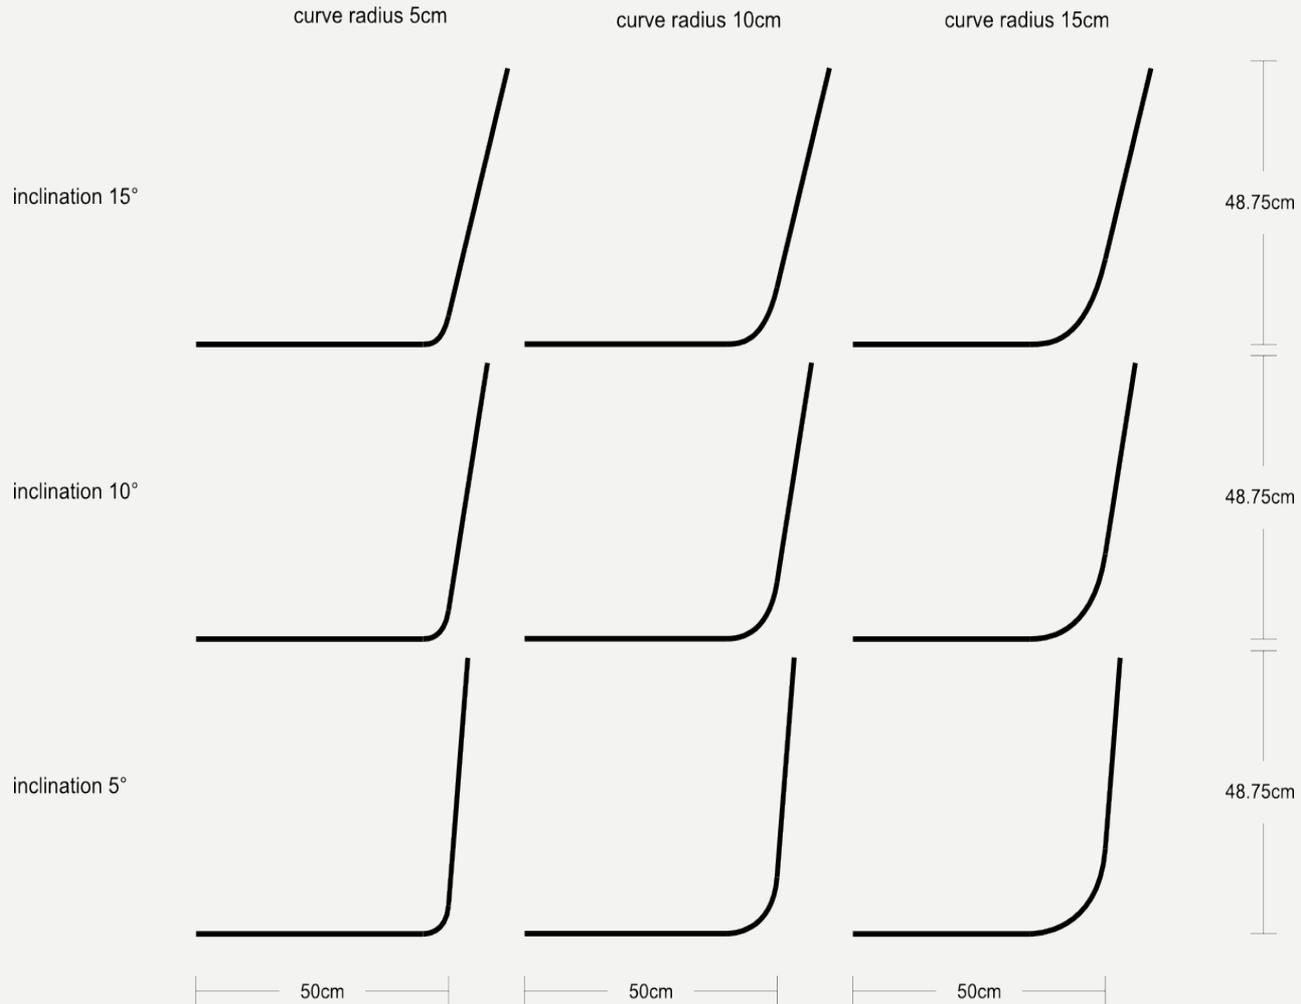

Integration of Ergonomics Standards

- | width of 120 cm
- | depth of 45 to 50 cm
- | table height of 72 cm

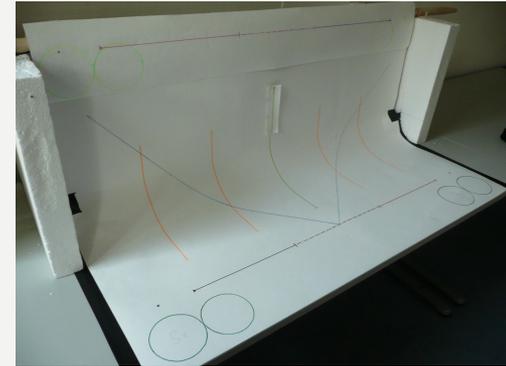

→ Open Attributes:

- | actual display height
- | curve radius
- | backward inclination of
vertical display part

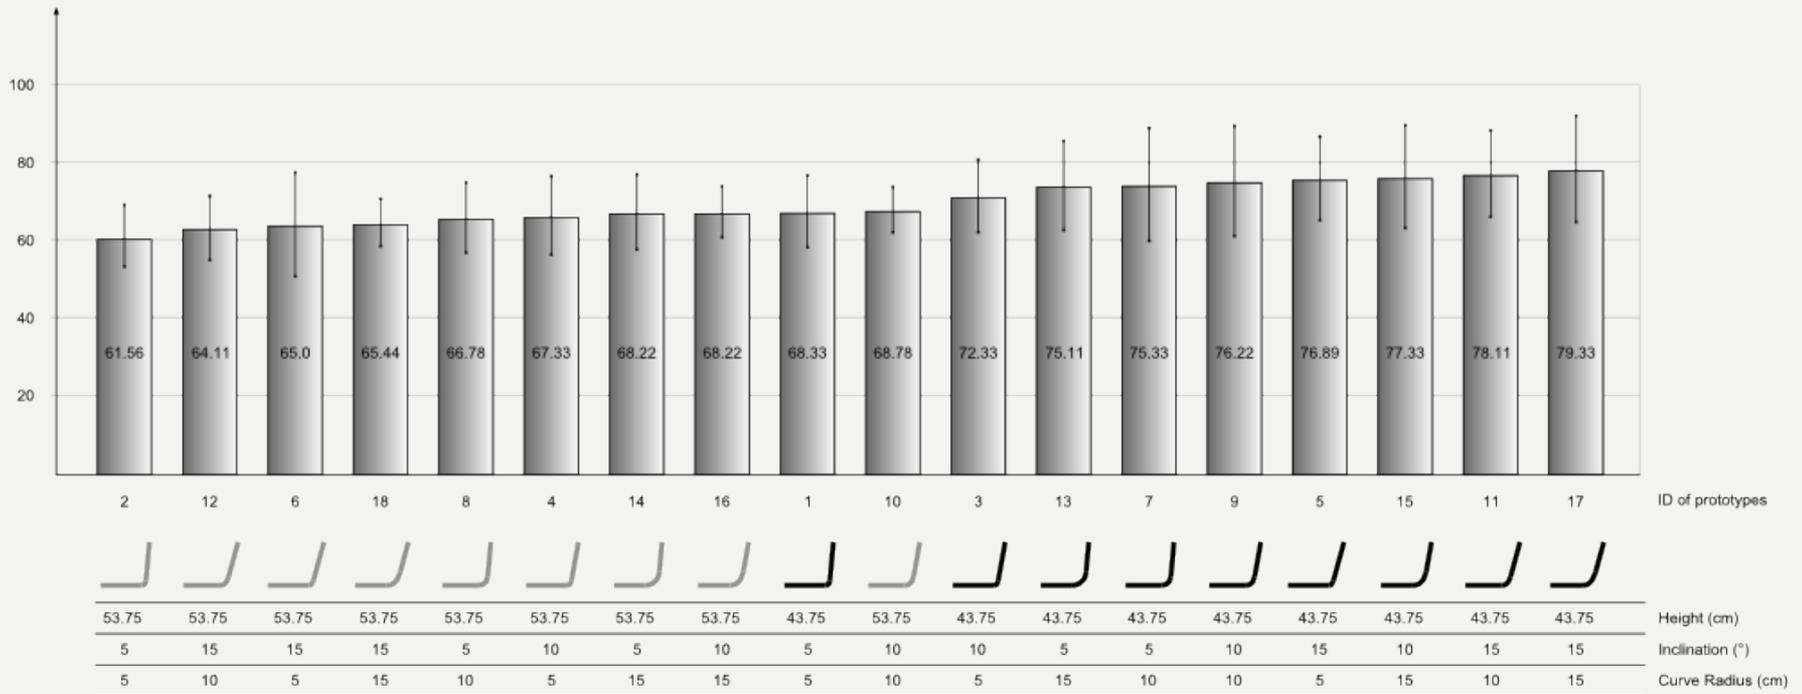

Experimentation:

- | mainly qualitative user study
- | nine participants
- | participants have to draw different paths on the paper screens
- | short questionnaires after each task

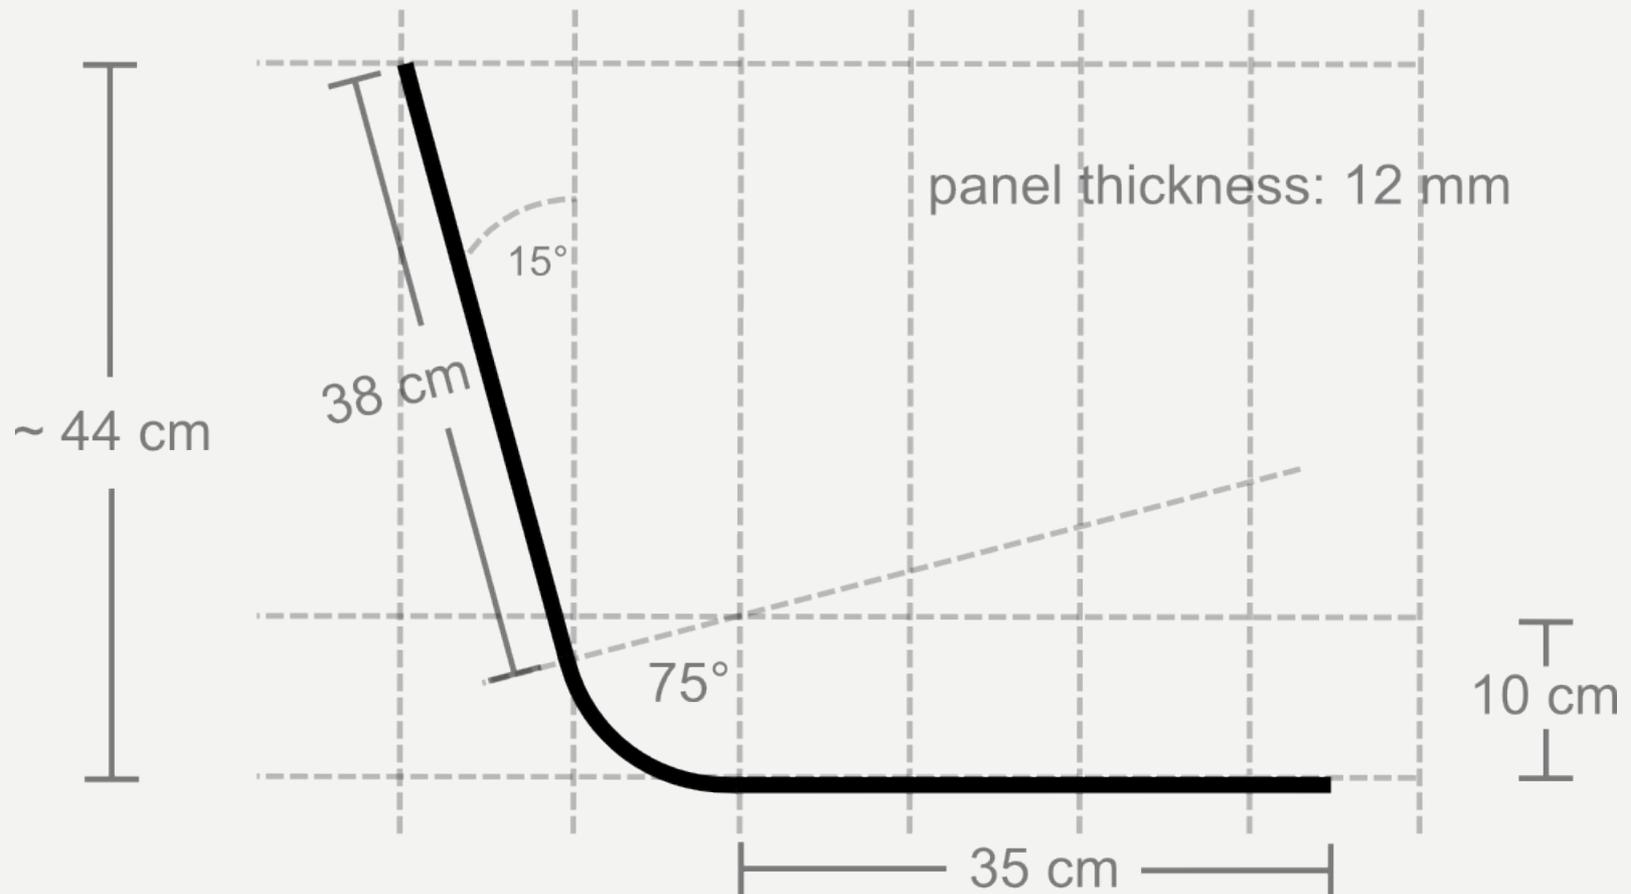

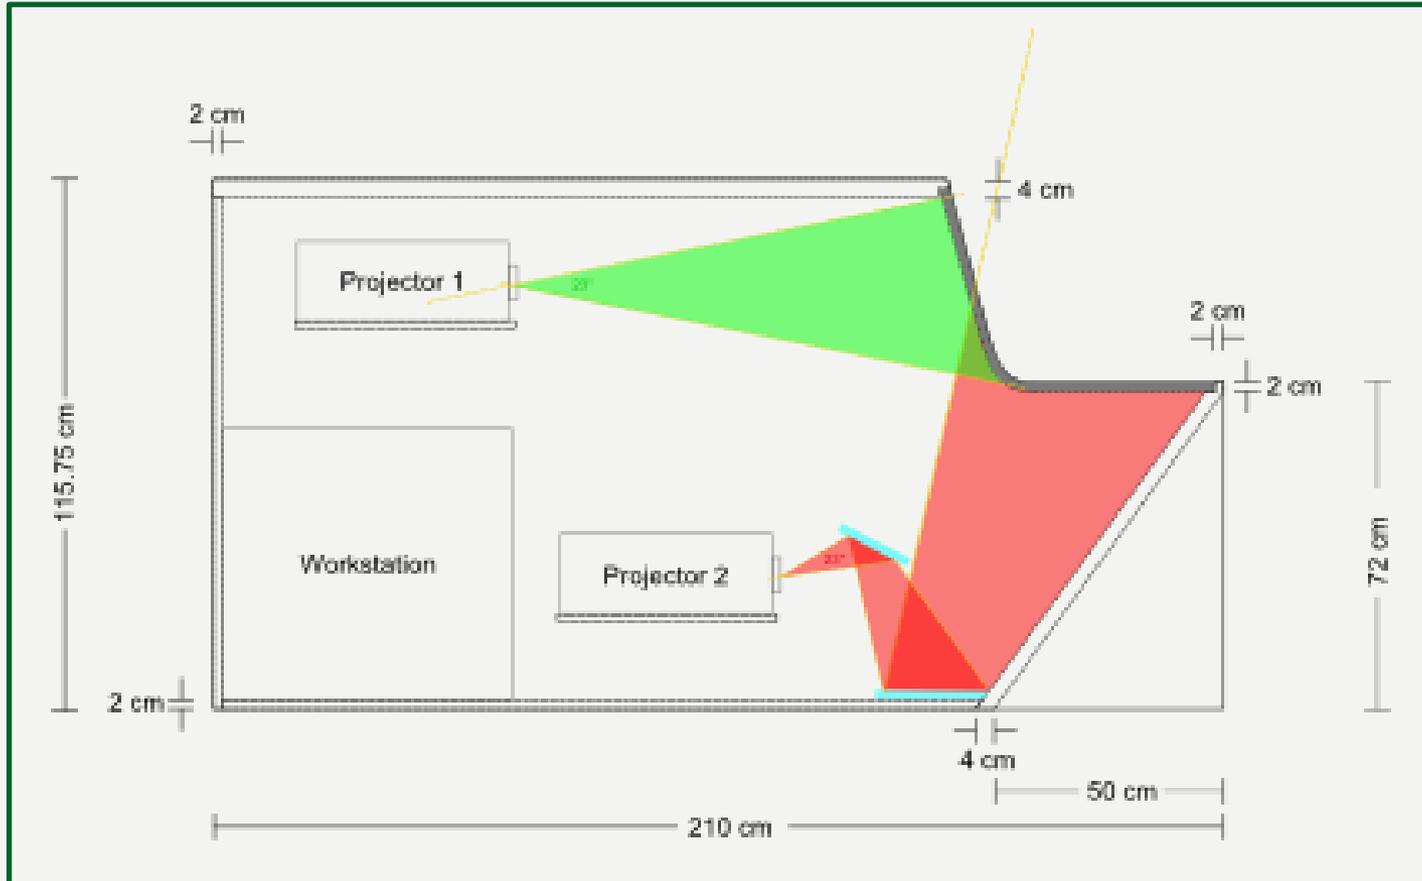

Average number of ranking points

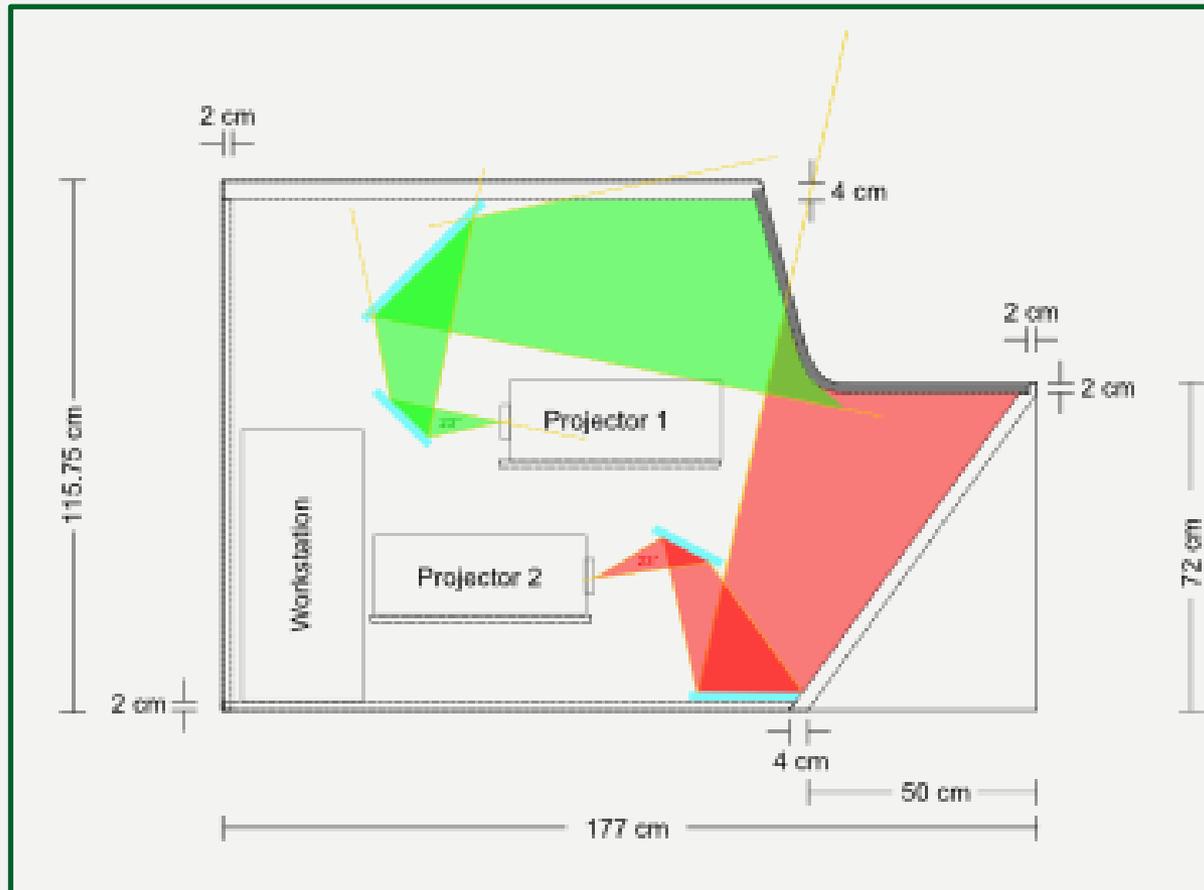

→ Final panel dimensions:

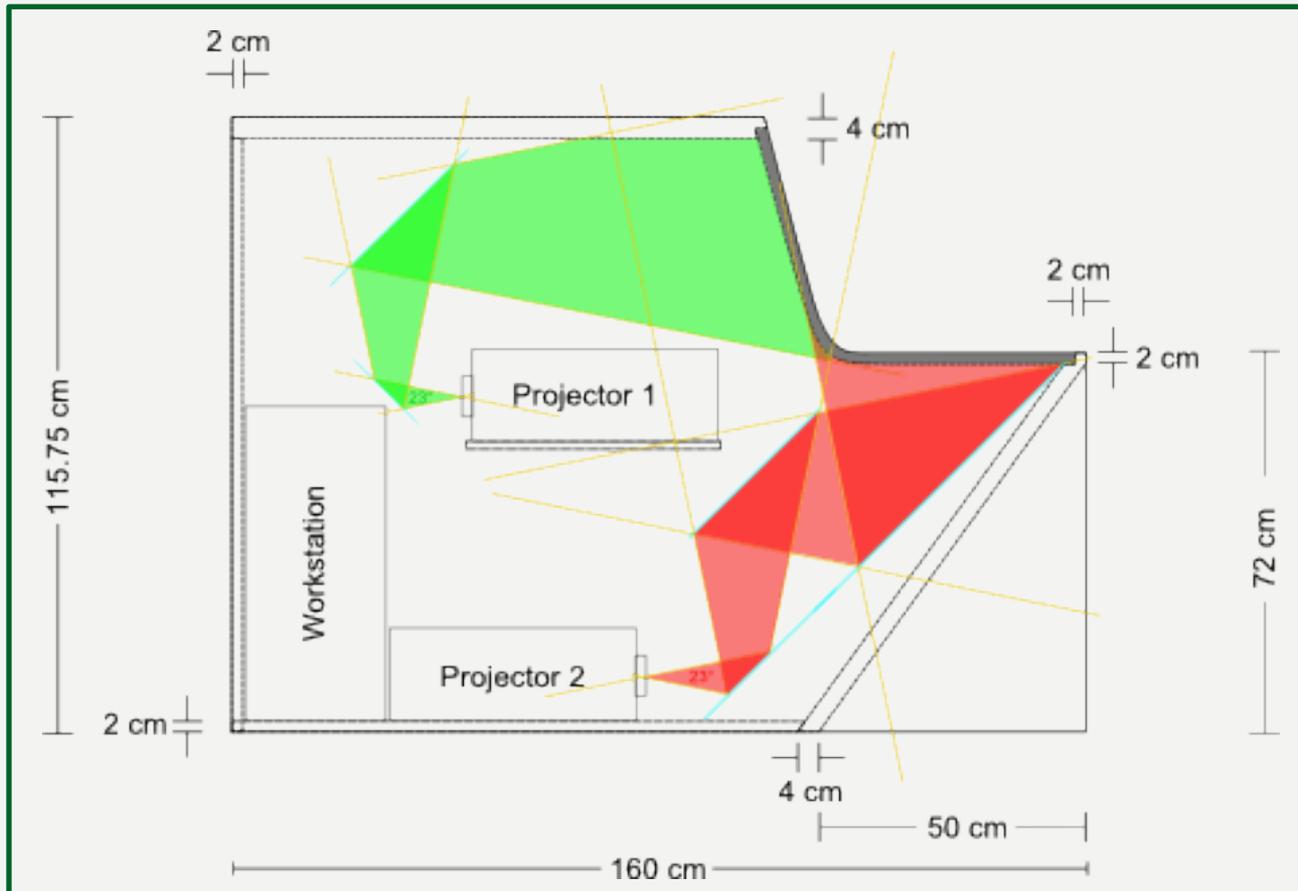

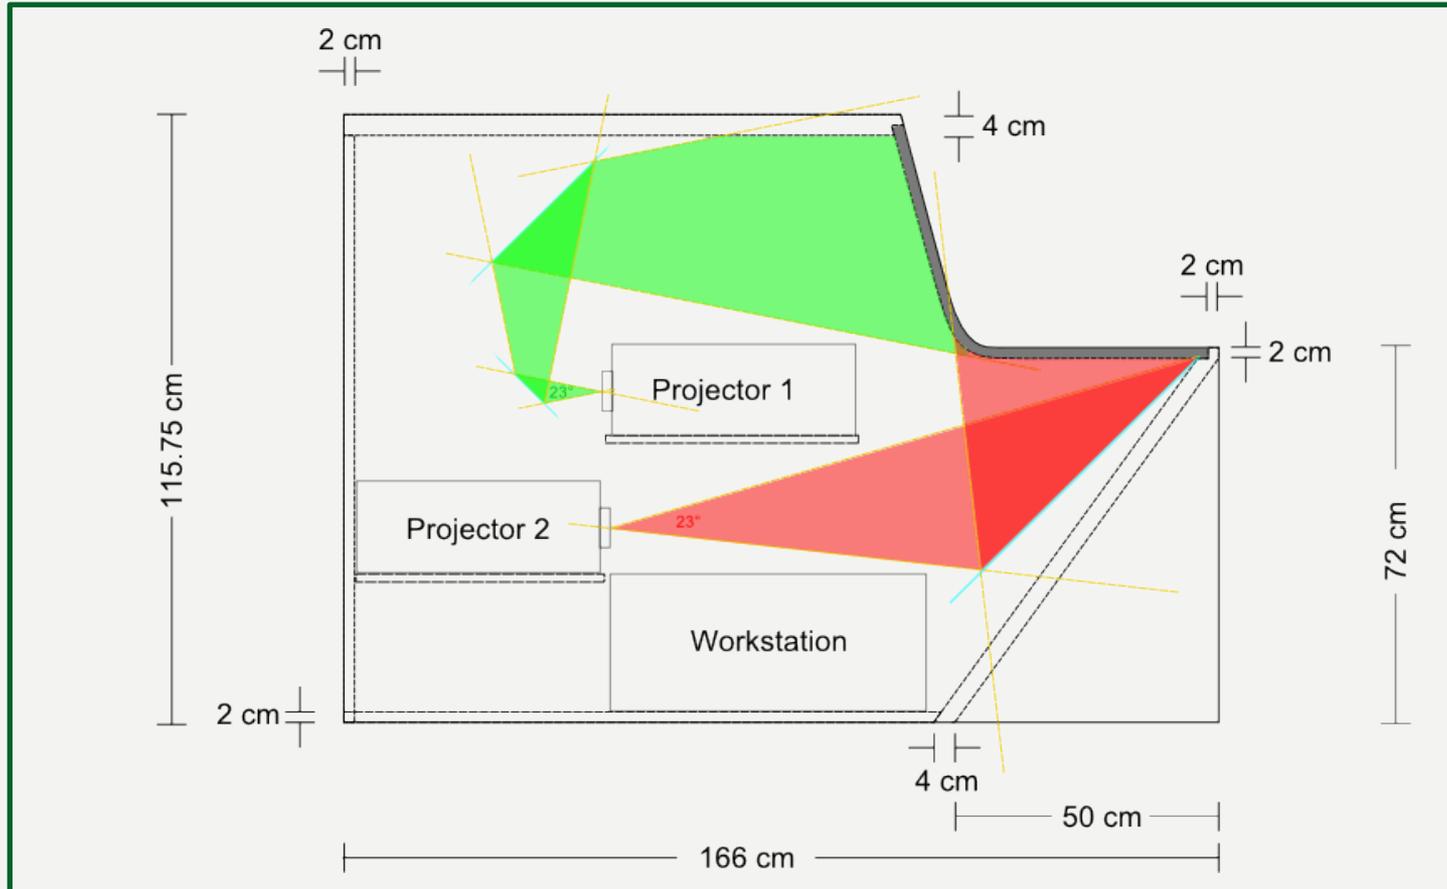

setup with two mirrors

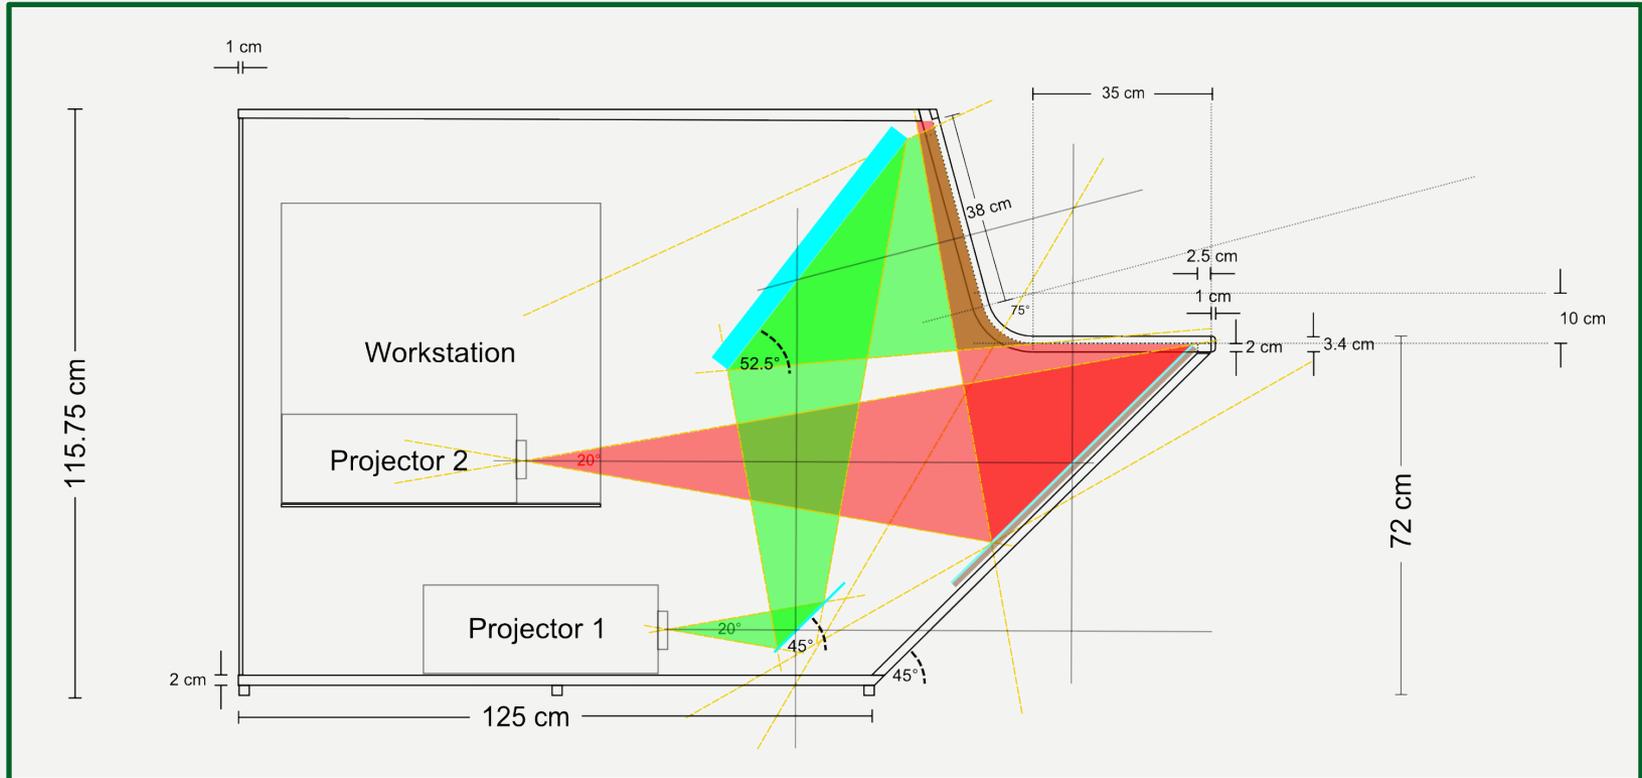

setup with 4 mirrors

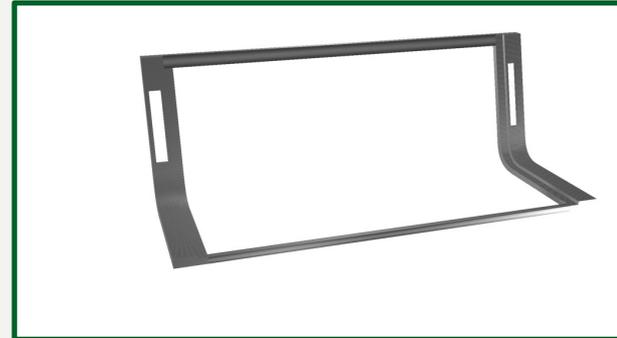

setup with 4-5 mirrors

setup with 3 mirrors

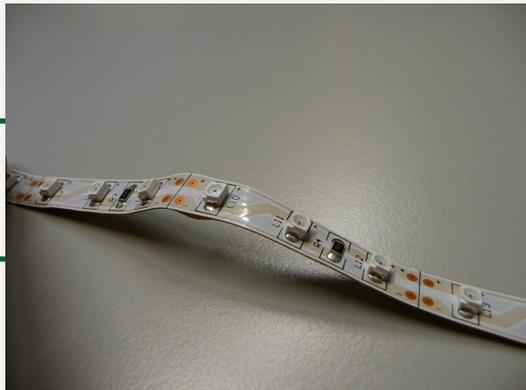

final
mirror setup

construction of the casing by the
carpentry of the LMU

Input:

- | multi-modal in the long term
- | as a start: keyboard, mouse, multi-touch using FTIR
- | four *Point Grey Firefly MV* cameras (640 x 480 px at 63 fps)
- | IR LED strips glued to the edges of the acrylic

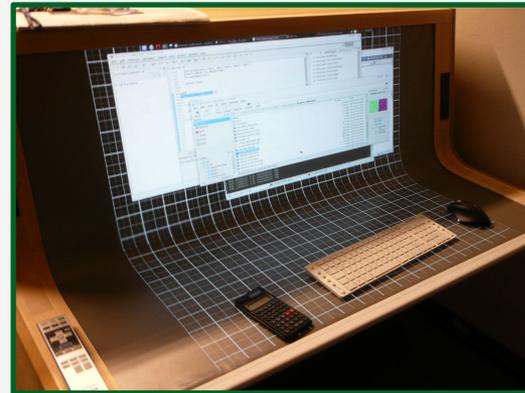

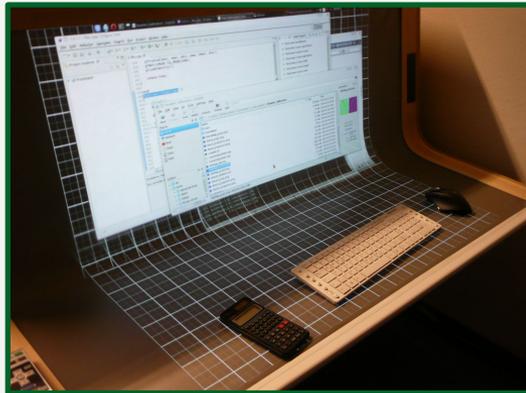

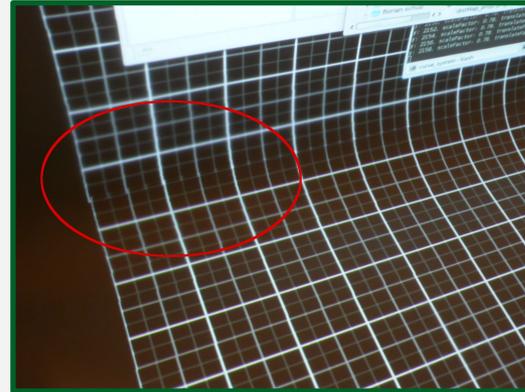

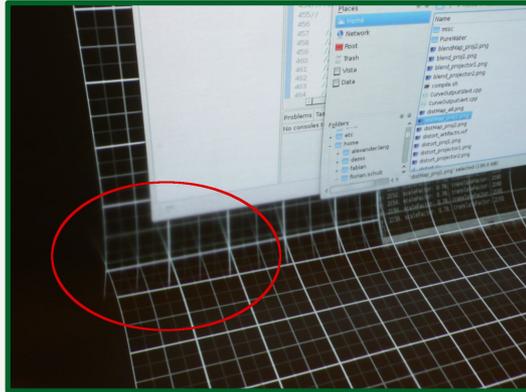

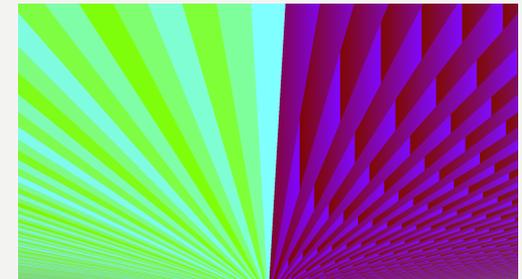

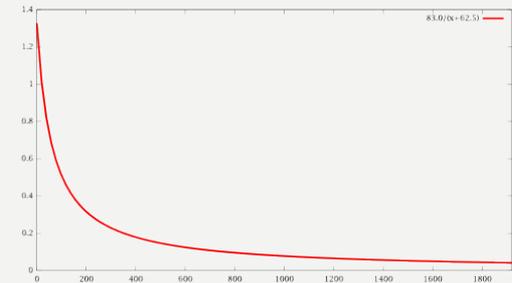

image correction results

Output:

- | images need to be pre-warped and scaled to get an undistorted view in the curve
- | as a start: manual output calibration using distortion maps
- | map creation with a small *Java* tool
- | actual image processing using shaders with a *Compiz*¹ plugin (fallback solution: distortion of a textured grid on CPU)

1. Compiz is a 3D compositing window manager; for further information, see <http://www.compiz.org/>

- | development of *Curve* still in progress
- | output calibration should be refined
- | direct-touch input does not work yet

Thank you
