LFE Medieninformatik Ÿ Andreas Butz (Dozent), Gregor Broll,

Alexander De Luca, Max-Emanuel Maurer

Praktikum Entwicklung von Mediensystemen mit Android

Introduction to Android

Today

- Schedule
- Organizational Stuff
- Introduction to Android
- Exercise 1

Schedule

- Two phases: individual and team phase
- Phase 1 Individual Phase:
 - Introduction to basics about Android
 - ➤ Exercises 1 to 4
 - Each student works on exercises himself/herself
 - Weekly meetings
- Phase 2 Project Phase:
 - Concept and implementation of an Android application
 - Topic: mobile student services
 - Students work in teams
 - Regular milestone meetings

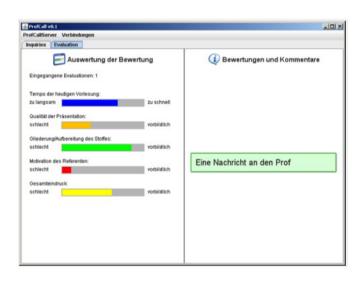

Topic: Mobile Services for Students

- Practical as part of a greater effort at LFE Media Informatics to investigate mobile services for students
 - Services tailored to students and their requirements
 - Adaptation of existing services/information to mobile usage
 - Creation of new, more adapted mobile services
- Collaboration with LMU-IT (Herr Diekamp)
 - Practical to develop prototypes that use real info and services
- Practical can build upon previous efforts
 - Diploma thesis by Tanja Herting (analysis of requirements, LMUApp)
 - Practical in winter term 2009/10 (example applications)
 - Practical can re-use interfaces to LSF from previous work

Mobile Services for Students -Examples

Timeline

Date	Topic/Activity				
29.04.2010	Introduction and Overview of the Android Platform				
06.05.2010	Implementing a User Interface				
13.05.2010	Christi Himmelfahrt				
20.05.2010	Storing, Retrieving and Exposing Data				
27.05.2010	Brainstorming, Application Design				
03.06.2010	Fronleichnam				
10.06.2010	Project Phase Starts				
	(Milestones)				
22./29.07.	Final Presentation				

Organizational Stuff I

- 4 SWS
- Weekly meetings
 - ➤ Thursday 14:00 s.t. 16:00
 - ➢ Room 105, Amalienstraße 17
- Room for the practical parts:
 - ➢ Medienlabor 103, Amalienstraße 17
 - Special accounts required
 - ➢ Open during normal working times (8:00 − 17:00)
 - ➤ 1 key for each group
- Homepage:
 - http://www.medien.ifi.lmu.de/pem

Organizational Stuff II

- Students work in teams
- SVN accounts for each team
 - > svn://tracsvn.medien.ifi.lmu.de/repos/pem_team[number]
 (e.g. svn://tracsvn.medien.ifi.lmu.de/repos/pem_team1)
- Students check their exercises in with their group's SVN repository
- Needed Accounts
 - ➤ SVN username
 - Medienlabor-Kennung
 - Belegungsplan Medienlabor

Teams

- Team 1
 - ➢ Kehr, Mautner, Fichtner
- Team 2
 - Schauer, Ateia, Hemme, Viegener
- Team 3
 - ➢ Huff, Vodicka, Heller, Tevi
- Team 4
 - Schmidmaier, Held, Bauer

Technology – SVN I

- SVN General
 - Version control system
 - > Enables collective editing of shared source code
 - Data stored in a "Repository" which is accessed over the network
 - Editing on local copies of the files
 - > Old version available on the server
 - When possible, files will be merged automatically when edited by multiple users at the same time
 - ➤ Similar to CVS

Technology – SVN II

- SVN First Steps (using Tortoise SVN)
 - 1. Download a SVN Client like Tortoise SVN for Windows <u>http://tortoisesvn.net/</u>
 - 2. Checkout your team repository (creates a local copy of the repository)

Create an empty folder, open it, right-click and choose "Checkout".

	Ansicht				
	Symbole anordnen nach Aktualsieren	9			
2	Ordner anpassen				
ACCU NOT	Einfügen Verknüpfung einfügen Umbenennen rückgängig machen Strg+Z				
A COLUMN TO A COLUMN					
	Umbenennen rückgängig machen Strg+Z				
	Umbenennen rückgängig machen Strg+Z Chedout	0			

Repository URL of repository:		
svn://murx.medien.ifi.lmu.de/team1		.
Checkout directory:		
X:\		
Only check out the top folder		
Revision		
Head Revision		
C Revision		
L		
Γ	ОК	Cancel

Technology – SVN III

- SVN First Steps (using Tortoise SVN)
 - 3. Each time you start working perform the "Update" command.
 - 4. Each time you're done working perform a "Commit". Both commands are located in the right-click menu.
 - Further functionalities are available in the right-click menu like "delete", "rename" and more.
 Attention: Do not use the OS-functionalities for this functions. And do not touch the hidden .svn-Folders, especially do not copy an svn-folder (use Export-Command).

For further Information read the German SVN introduction by Richard Atterer, which can be found here:

http://www.medien.ifi.lmu.de/fileadmin/mimuc/mmp_ss04/Pr ojektaufgabe/mmp-subversion.pdf

An Introduction to Android - Outline

- What is Android?
- Installation
- Getting Started
- Anatomy of an Android Application
- Life Cycle of an Android Application

What is Android?

- Released in Nov. 2007 rumored to be some kind of GPhone
- Open, free mobile platform with a complete software stack
 - Operating system
 - > Middleware
 - ➤ Key mobile applications
- Developed by the Open Handset Alliance
- Built on the open Linux kernel
- Custom Dalvik virtual machine for mobile environments
- Applications written in Java
- Open source; Apache v2 open source license
- Applications can access all core functionalities of a mobile device
- No differentiation between core and 3rd party applications
- Can be extended to incorporate new technologies

Open Handset Alliance

- Group of more than 30 technology and mobile companies led by Google
 - Mobile Operators, e.g. China Mobile, KDDI, NTT DoCoMo, T-Mobile, Sprint Nextelk, Telefonica
 - Semiconductor Companies, e.g. Broadcom, Intel, Nvidia, Qualcomm, SiRF, Texas Instruments
 - Handset Manufactureres, e.g. HTC, LG, Motorola, Samsung
 - ➢ Software Companies, e.g. eBay, Google,
- Goal: *"to accelerate innovation in mobile and offer consumers a richer, less expensive, and better mobile experience* "
- Android as the first project towards an open and free mobile experience, but also commercial deployment
- URL: www.openhandsetalliance.com/index.html

Source: www.openhandsetalliance.com/

16

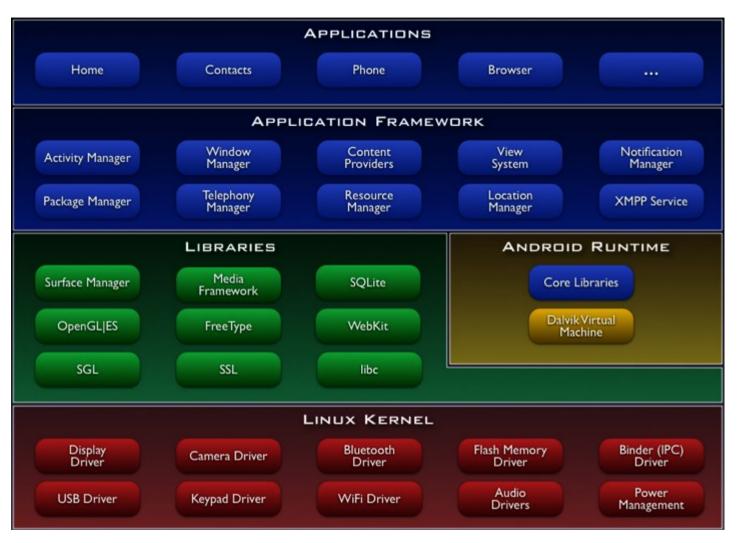

Android Features

- **Application framework** enabling reuse and replacement of components
- **Dalvik virtual machine** optimized for mobile devices (register based)
- **Integrated browser** based on the open source <u>WebKit</u> engine
- **Optimized graphics** powered by a custom 2D graphics library; 3D graphics based on the OpenGL ES 1.0 specification (hardware acceleration optional)
- **SQLite** for structured data storage
- **Media support** for common audio, video, and still image formats (MPEG4, H.264, MP3, AAC, AMR, JPG, PNG, GIF)
- **GSM Telephony** (hardware dependent)
- Bluetooth, EDGE, 3G, and WiFi (hardware dependent)
- Camera, GPS, compass, and accelerometer (hardware dependent)
- **Rich development environment** including a device emulator, tools for debugging, memory and performance profiling, and a plugin for the Eclipse IDE

17

Android Architecture

Source: http://code.google.com/android/index.html

Linux Kernel

- Linux kernel version 2.6
- Abstraction layer between hardware and the software stack
- Core services
 - Security
 - Memory management
 - Process management
 - Network stack
 - Driver model

Libraries

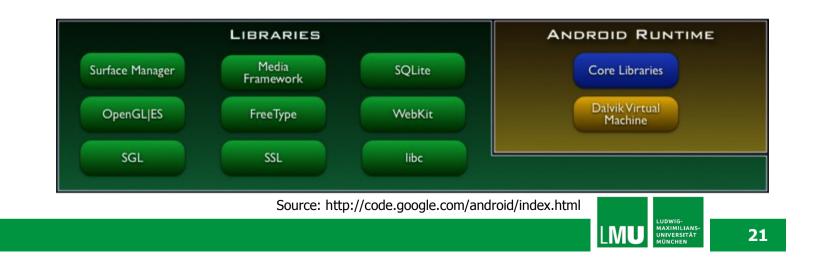

- C/C++ libraries used by various Android components
- Developers can use their capabilities through the application framework
- Includes:
 - Media Libraries: includes MPEG4, H.264, MP3, JPG, PNG, ...
 - > WebKit/LibWebCore: web browser engine
 - > SQLite: relational database engine
 - Libraries/engines for 2D and 3D graphics

LMU

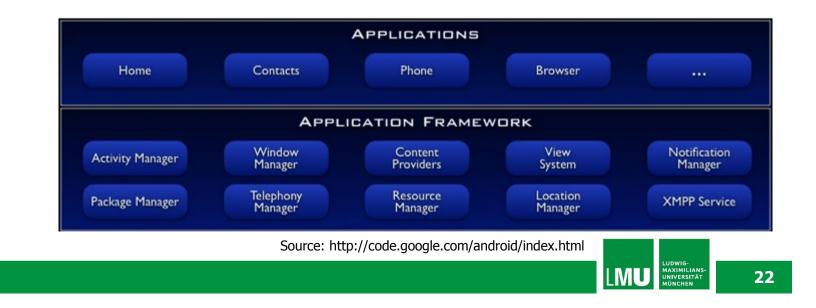

Android Runtime

- Core libraries provide Java functionalities
- Dalvik virtual machine relies on Linux kernel for e.g. threading or low-level memory management
- Devices can run multiple Dalvik VMs, every Android application runs with its own instance of Dalvik VM
- VM executes optimized Dalvik Executable files (.dex)
- Dx-tool transforms compiled Java-files into dex-files

Applications / Application Framework

- Core applications, e.g. contacts, mail, phone, browser, calender, maps, ...
- Full access to all framework APIs for core applications
- Simplified reuse of components
- Applications written in Java

Core Android Packages

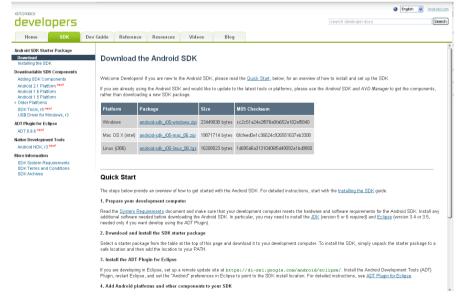

- <u>android.util</u>
 - contains various low-level utility classes, such as specialized container classes, XML utilities, etc.
- <u>android.os</u>
 - provides basic operating system services, message passing, and inter-process communication.
- <u>android.graphics</u>
 - \succ is the core rendering package.
- <u>android.text</u>, <u>android.text.method</u>, <u>android.text.style</u>, and <u>android.text.util</u>
 - > supply a rich set of text processing tools, supporting rich text, input methods, etc.
- <u>android.database</u>
 - > contains low-level APIs for working with databases.
- android.content
 - provides various services for accessing data on the device: applications installed on the device and their associated resources, and content providers for persistent dynamic data.
- android.view
 - ➢ is the core user-interface framework.
- <u>android.widget</u>
 - supplies standard user interface elements (lists, buttons, layout managers, etc) built from the view package.
- <u>android.app</u>
 - > provides the high-level application model, implemented using Activities.

Android Version History

Version	Features
1.5 Cupcake	30.04.2009: Onscreen-Keyboard with "Autocomplete", Screen switch Animations, Video upload
1.6 Donut	15.09.2009: Screenshots on the android market, Voice Search, WVGA resolutions,
2.0/2.1 Eclair	12.01.2010: Speed improvements, More screen resolutions (dip), Camera flash support, Live wallpapers, Multitouch support

Installing SDK

- Please follow instructions from the Android doc
- Download and install the Android SDK
- SDK includes documentation, tools and examples
- Set up your IDE; Eclipse (Java EE) recommended
- Install Eclipse Android Development Tools (ADT) plugin, connect it with the Android SDK and Download your Platforms

http://developer.android.com/sdk/index.html

Installing SDK

- Create an Android project
 - Standard Eclipse procedure
 - > Automatically creates folders and a Manifest file
 - Can also be used to create a demo project
- Set up a launch configuration
 - ➢ Run application from menu or
 - Define settings for run configuration (project, activity, emulator options, ...) from Run > Open Run Dialog >
- Run Android application in emulator
 - ➢ Be Patient! The emulator takes while to boot up.
 - ➤ Keep it open once it was started!

Hello Android III

```
* Copyright (C) 2007 The Android Open Source Project.
package com.example.android.helloactivity;
import android.app.Activity;
1 * *
 * A minimal "Hello, World!" application.
 */
public class HelloActivity extends Activity {
    public HelloActivity() {
    }
    /**
     * Called with the activity is first created.
     */
    00verride
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        // Set the layout for this activity. You can find it
        // in res/layout/hello activity.xml
        setContentView(R.layout.hello activity);
   }
```

Hello Android IV

Anatomy of an Android Application

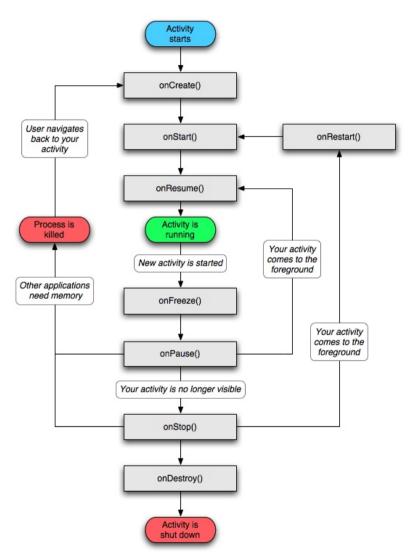

- 4 main building blocks for Android applications
 - \succ Activity
 - Intent Receiver
 - \succ Service
 - Content Provider
- AndroidManifest.xml lists all components of an application, their capabilities and requirements

Activity

- Single, focused thing or task
- Extends the Activity base class
- Refers to a single screen in a (multiscreen) application
- Displays a UI, interacts with user, responds to events
- 2 main methods:
 - onCreate(Bundle): initialization of activity, set UI, ...
 - > onPause(): leaving an activity
- Moving through screens by starting other activities
- Activities managed by activity stack
- New activity put on top of the stack
- 4 states: active/running, paused, stopped, killed/shut down

Source: http://code.google.com/android/index.html

LUDWIG-MAXIMILIANS UNIVERSITÄT MÜNCHEN

LMU

Intents and Intent Filters

- Intent
 - Abstract description of an operation/action to be performed
 - > Mostly used for launching activities; "glue between activities"
 - Action: general action to be performed, e.g. VIEW_ACTION, EDIT_ACTION, MAIN_ACTION, ...
 - > Data: data to operate on, expressed as a URI
 - Example: <u>VIEW_ACTION</u> content://contacts/1
- Intent Filter
 - Describes what Intents an activity can handle
 - Activities publish Intent Filters describing their capabilities/ how they can handle certain Intents and their actions
 - Navigating between screens is accomplished by resolving Intents => system matches Intents and Intent Filters
 - Activity calls method startActivity(myIntent)

Intent Receiver, Service, Content Provider

- Intent Receiver
 - \succ Used to execute code upon an external event, e.g. phone rings
 - > Usually no UI; may use the NotificationManager
- Service
 - > Application component running in the background
 - \succ Runs indefinitely, no UI, no interaction with user
 - \succ E.g. media player
- Content Provider
 - > Used to share data with other applications

Life Cycle of an Android Application

- Each Android application runs in its own Linux process
- Process's lifetime not directly controlled by application
- Determined by the system, depending on running applications, their importance, available memory
- Components (Activity, Service, Intent Receiver) impact the lifetime of the application's process
- Importance hierarchy for killing processes based on
 - Components running in them
 - > The state of these components

Android's Importance Hierarchy

- 1. Foreground Process
 - Required for current user activities
 - > E.g. running an Activity at the top of the screen
- 2. Visible Process
 - \succ Activity is visible but not in the foreground (onPause())
 - E.g. previous activity displayed behind a foreground dialog
- 3. Service Process
 - \succ Holds a Service, not directly visibleE.g. media player, network up/download
- 4. Background Process
 - \succ Holds an Activity that is currently not visible (onStop())
 - Can be killed at any time to reclaim memory
- 5. Empty Process
 - Holds no active application components

Exercise 1

- Follow the Hello Android example
- Add a picture to the "Hello Android"-text
- Submit your solution using SVN
 - Create your personal folder "nachname" in the SVN-repository of your group
 - Create a folder for each exercise named "exerciseX" and put all necessary source files there
- Submit your solution until Wednesday, 05.05.10, 12p.m.
