IxDA Sessions with Aarron Walter, Director of UX at MailChimp

Join us for this IxDA Munich Q&A Session on May 6th, 2013, with the ingenious designer behind MailChimp, the famous state of the art newsletter service. Aarron will join us live directly from Atlanta via Skype in a conversation about his career, work, his book and designs.

About the Speaker

Aarron Walter is the Director of User Experience at **MailChimp**, where he strives to make software more human. Aarron is the author of **Designing for Emotion** from **A Book Apart**. Aarron taught design at colleges in the US and Europe for nearly a decade, and speaks at conferences around the world. His design guidance has helped the White House, the US Department of State, and dozens of startups and venture capitalists. He tweets about design under the moniker **@aaron** on Twitter.

Approaches to Interaction Design and the Role of the **Users**

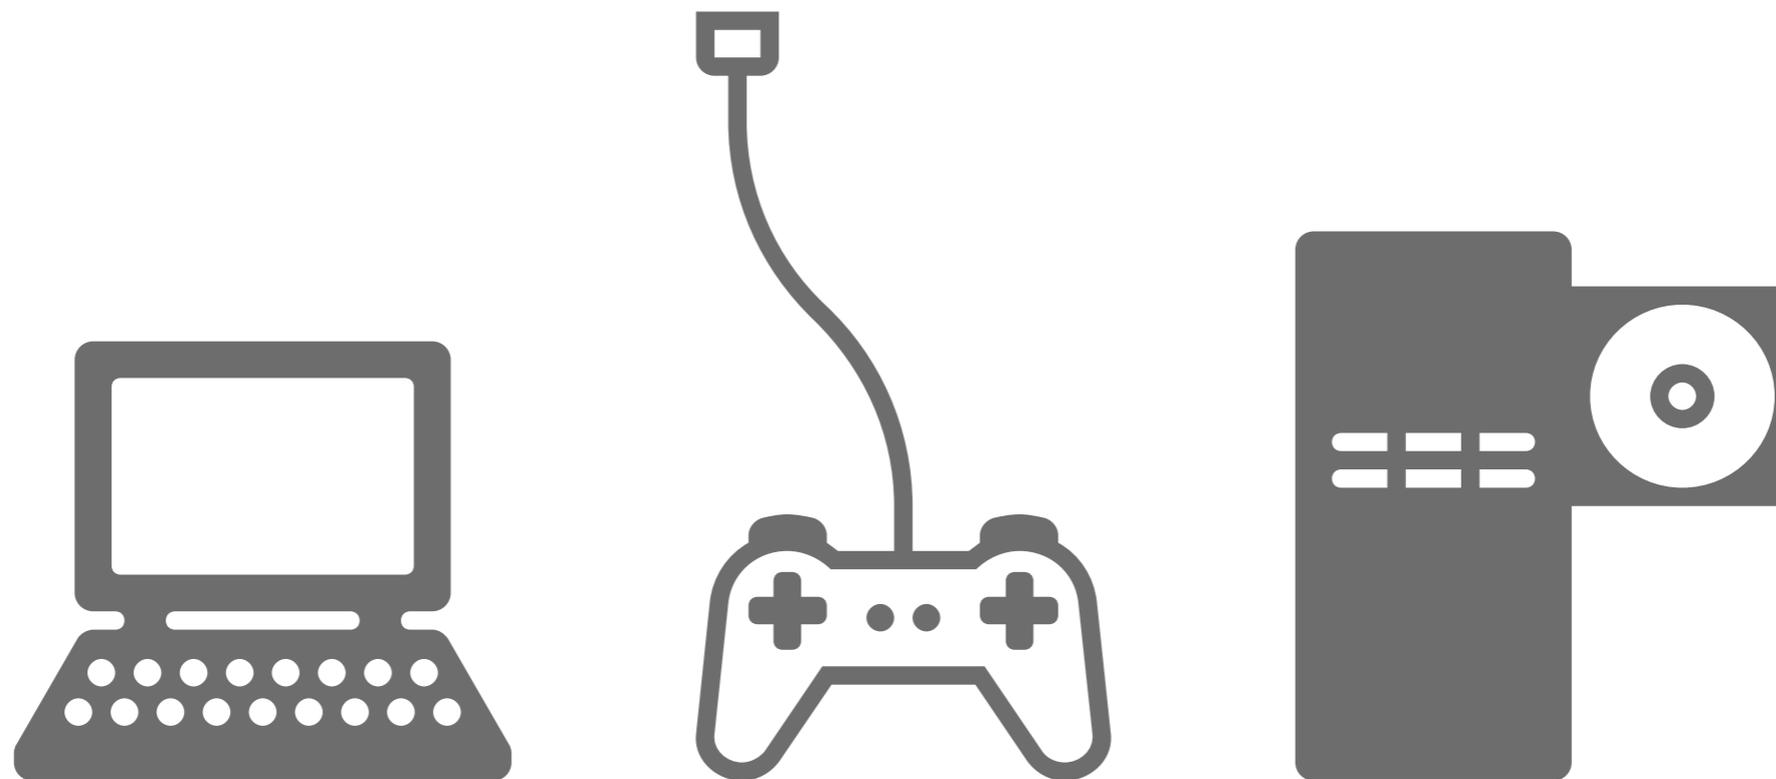

Approaches to Interaction Design

- The Purpose of Different Approaches
- Four Main Approaches
- User Centered Design (UCD)
- Activity Centered Design
- Systems Design
- Genius Design

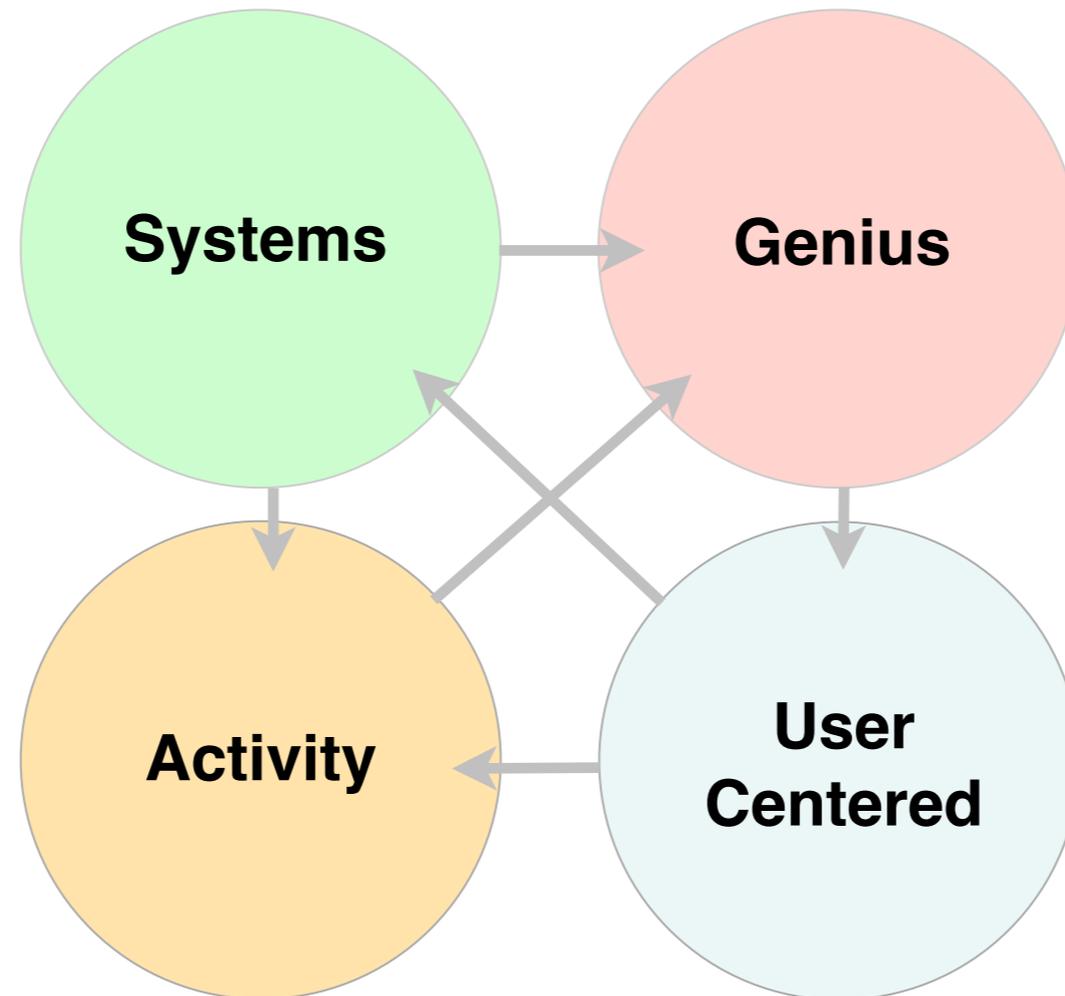

source: [5]

- can be used in many different situations to create vastly different products and services,
- e.g. Web sites, consumer electronics or nondigital services.

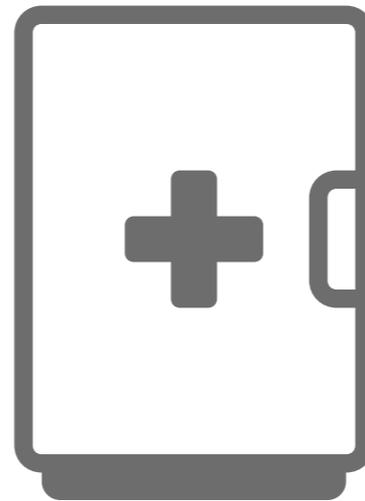

source: [5]

- move between approaches, applying the best approach to the right context
- sometimes applying multiple approaches even within a single project.

source: [5]

- problematic situations can be improved by developing at least one of these approaches

Four Approaches to Design

<i>Approach</i>	<i>Overview</i>	<i>Users</i>	<i>Designer</i>
User-Centered Design	Focuses on user needs and goals	Guide the design	Translates user needs and goals
Activity-Centered Design	Focuses on the tasks and activities that need to be accomplished	Perform the activities	Creates tools for actions
Systems Design	Focuses on the components of a system	Set the goals of the system	Makes sure all the parts of the system are in place
Genius Design	Relies on the skill and wisdom of designers used to make products	Source of validation	Is the source of inspiration

source: [5]

Approaches to Interaction Design

- The Purpose of Different Approaches
- Four Main Approaches
- User Centered Design (UCD)
- Activity Centered Design
- Systems Design
- Genius Design

Case Study:

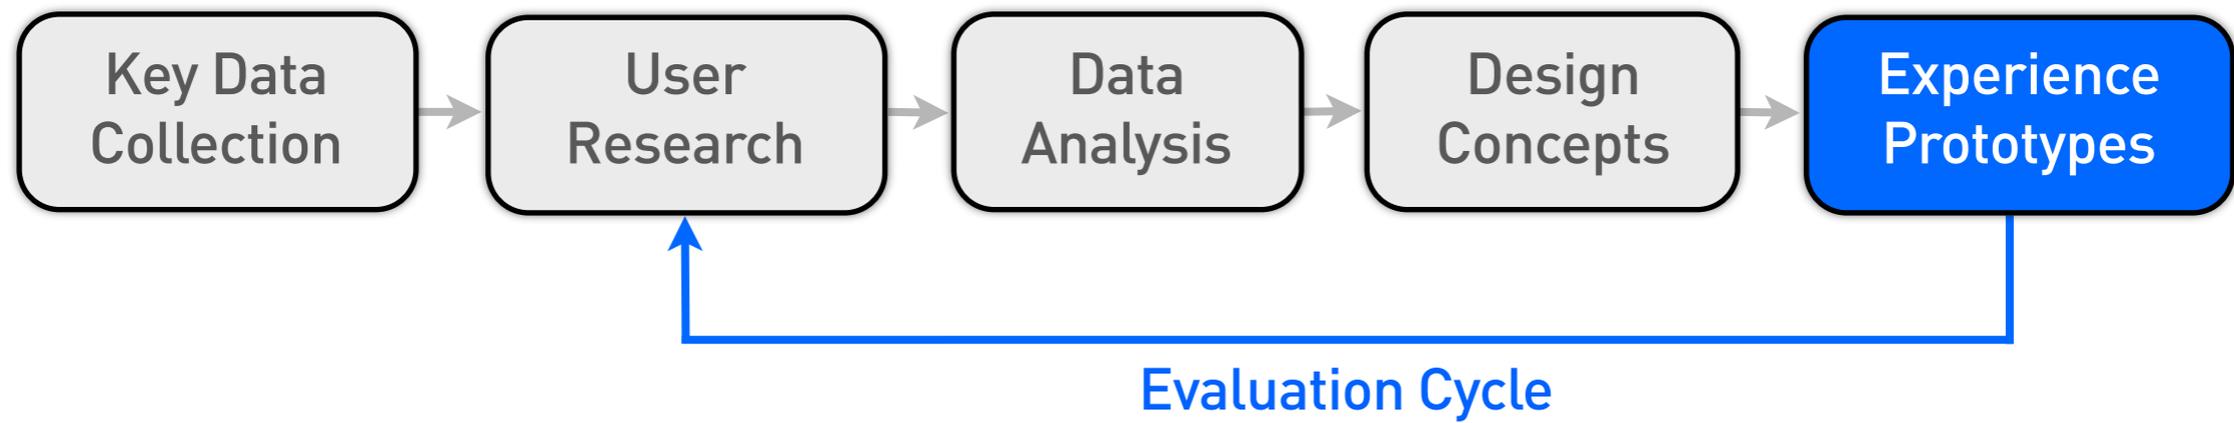

Paul Bradly

- designed the “Microsoft Mouse”
- followed an established “User-Centered Design Process” (UCD)
- helps Interaction Designers at IDEO developing their prototypes

Looking back...

User Centered Design (UCD)

Philosophy: Users know best

- People who will be using a product or service know what their **needs, goals** and preferences are
- Designers aren't the users.
- Participation from users at every stage of the design process.
- Roots in industrial design and ergonomics:
Industrial designer Henry Dreyfuss (Bell) popularized the method with his 1955 book "Designing for People".
- Software designers were long time unaware of the method

source: [5]

- With increased memory and processor powers and color monitors different forms of interfaces were now possible
- In the early 1980's a movement began **focusing on the users** not on computers.

source: [5]

What is a user-centered approach?

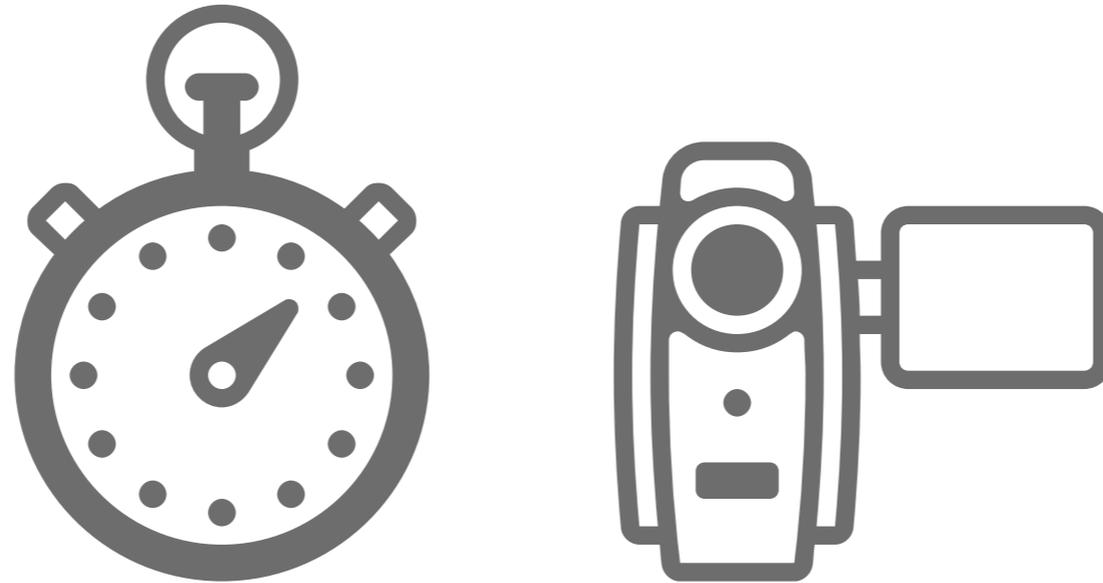

- User-centered approach is based on:
 - **Early focus** on users and tasks: directly studying cognitive, behavioral, anthropomorphic & attitudinal characteristics

source: [4]

What is a user-centered approach?

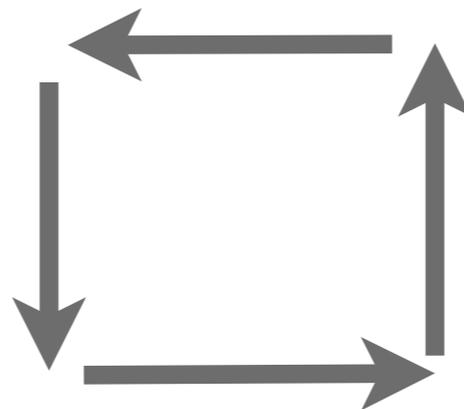

- User-centered approach is based on:
 - **Early focus** on users and tasks: directly studying cognitive, behavioral, anthropomorphic & attitudinal characteristics
 - **Empirical measurement:** users' reactions and performance to scenarios, manuals, simulations & prototypes are observed, recorded and analyzed

source: [4]

What is a user-centered approach?

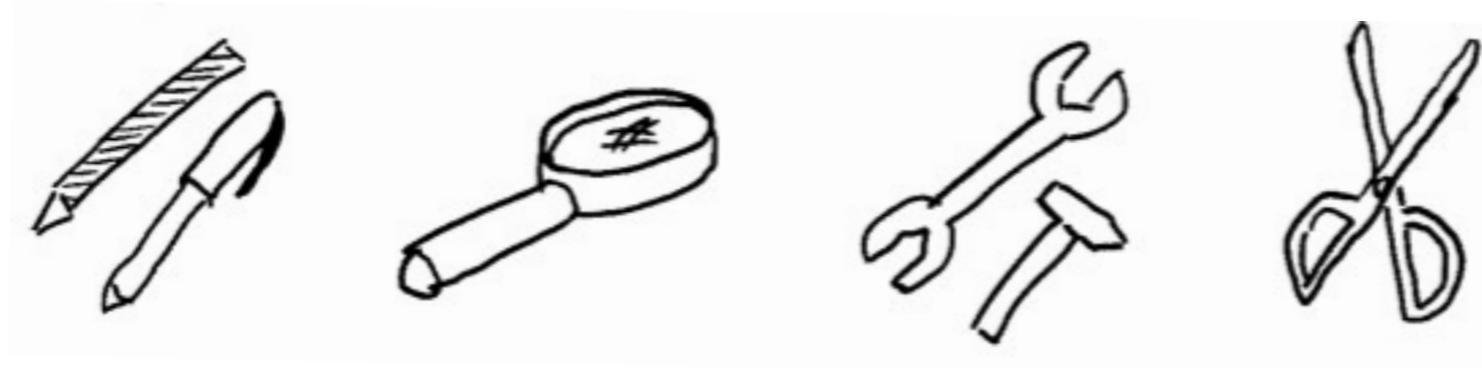

- User-centered approach is based on:
 - **Early focus** on users and tasks: directly studying cognitive, behavioral, anthropomorphic & attitudinal characteristics
 - **Empirical measurement:** users' reactions and performance to scenarios, manuals, simulations & prototypes are observed, recorded and analyzed
 - **Iterative design:** when problems are found in user testing, fix them and carry out more tests

source: [4]

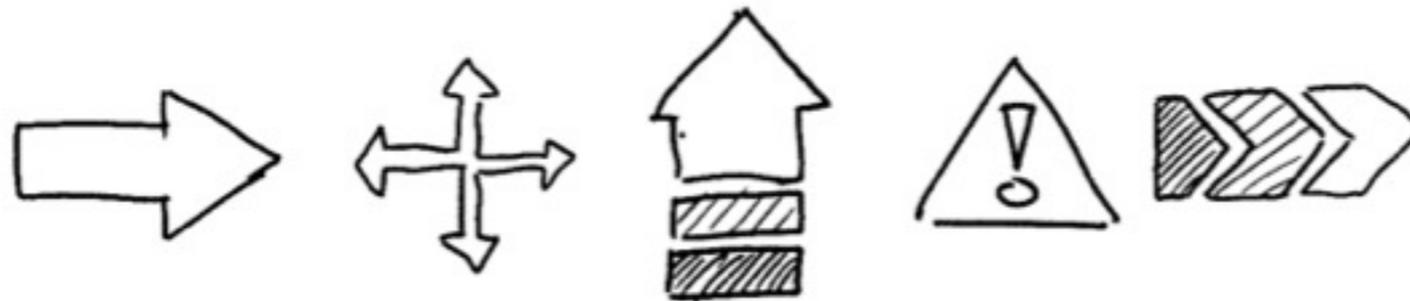

Four basic activities

- Identifying needs and establishing requirements

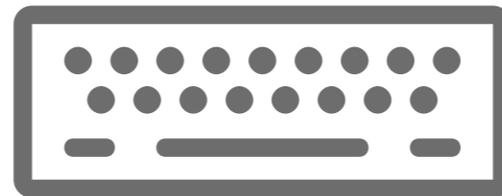

Four basic activities

- Identifying needs and establishing requirements
- Developing alternative designs

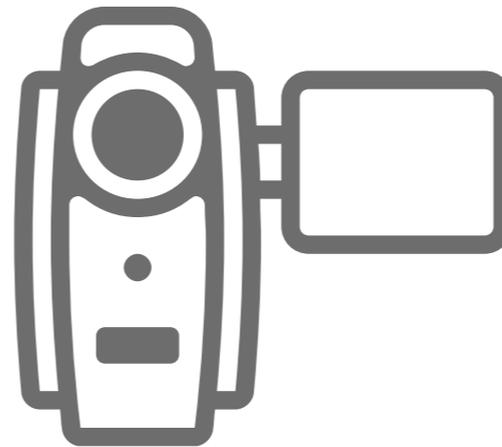

Four basic activities

- **Identifying needs and establishing requirements**
- **Developing alternative designs**
- **Building interactive versions of the designs**

Four basic activities

- **Identifying needs and establishing requirements**
- **Developing alternative designs**
- **Building interactive versions of the designs**
- **Evaluating designs**

Summary:

- **Goals** are important in UCD -> interaction designer focus on what the user ultimately wants to accomplish.
- Interaction designer determines the user's task and means necessary to achieve those goals -> always with the users needs and preferences in mind
- Interaction designers involve users at every stage of the process
- Users are consulted of the very beginning of a new project
- Interaction designers conduct extensive research (Chapter 4) up front to determine what the users goals are in the current situation
- Interaction Designers test and try prototypes of a system with users
- **User data is a determining factor throughout the project when making decisions**

Approaches to Interaction Design

- The Purpose of Different Approaches
- Four Main Approaches
- User Centered Design (UCD)
- Activity Centered Design
- Systems Design
- Genius Design

Case Study:

Jeff Hawkins

- worked with the team that developed the first laptop, the Compass by GRID
- developed the first tablet PC, the GRIDpad
- started PALM computing

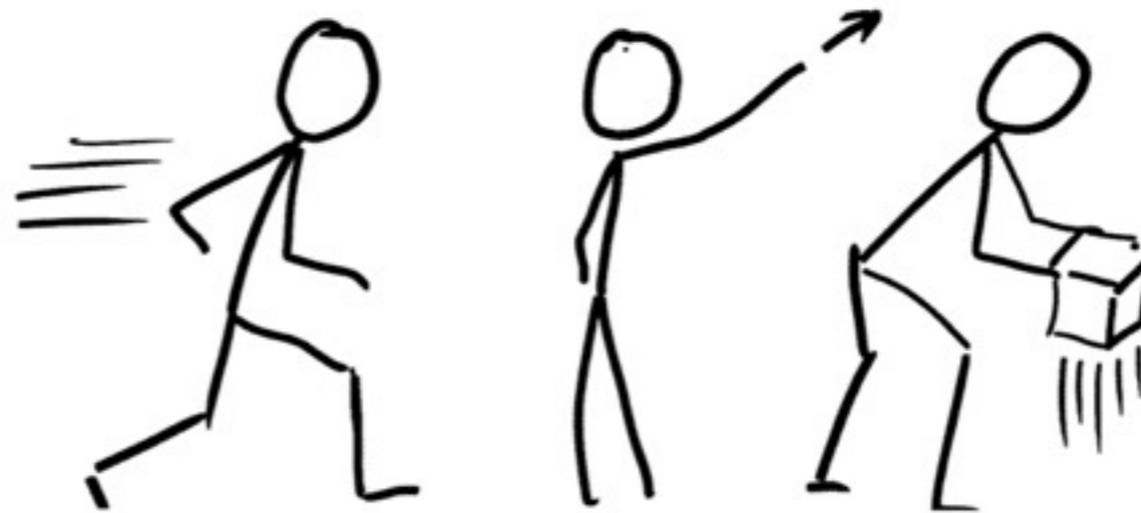

Looking back...

Activity Centered Design

- Philosophy: Activities as the main design focus
- Activities are a **cluster of actions and decisions** that are done for a purpose (**tasks**)
- The purpose of an activity is not necessarily a goal
- Purposes are more focused and tangible than goals

Case Study:

Dennis Boyle

- worked for a tech-consulting firm later known as the interaction design consultancy IDEO
- worked on the PalmPilot Os & Graffiti
- introduced the “Tech Box”

Graffiti® Alphabet (•) Heavy dot indicates starting point.

Summary:

- The difference between a task and an activity can be fairly minor
- Some tasks have enough parts to be considered as sub activities themselves
- Like UCD, activity centered design relies on research as the basis for its insights, albeit not as heavily
- Interaction designers catalog users' activities and tasks which leads to a specific design solution to help users accomplish the task, not to achieve a goal per se
- The **activity**, not the people doing the activity **guides the design process**

A danger in **activity-centered design**
is that designers might not look for solutions for the
problem as a “whole”
(Not see the forrest for the trees)

source: [5]

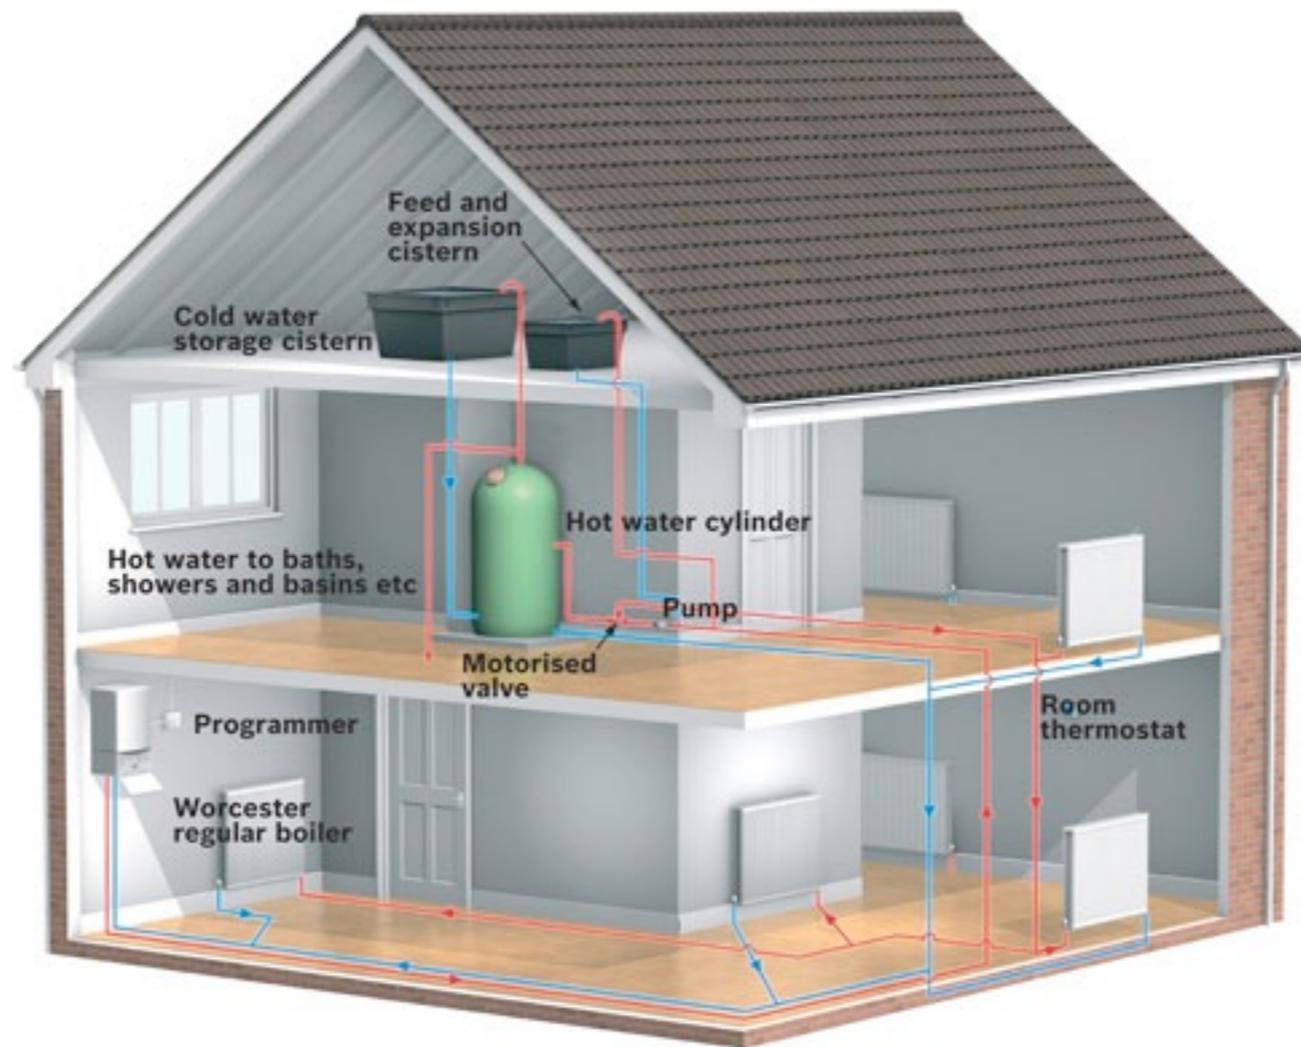

Approaches to Interaction Design

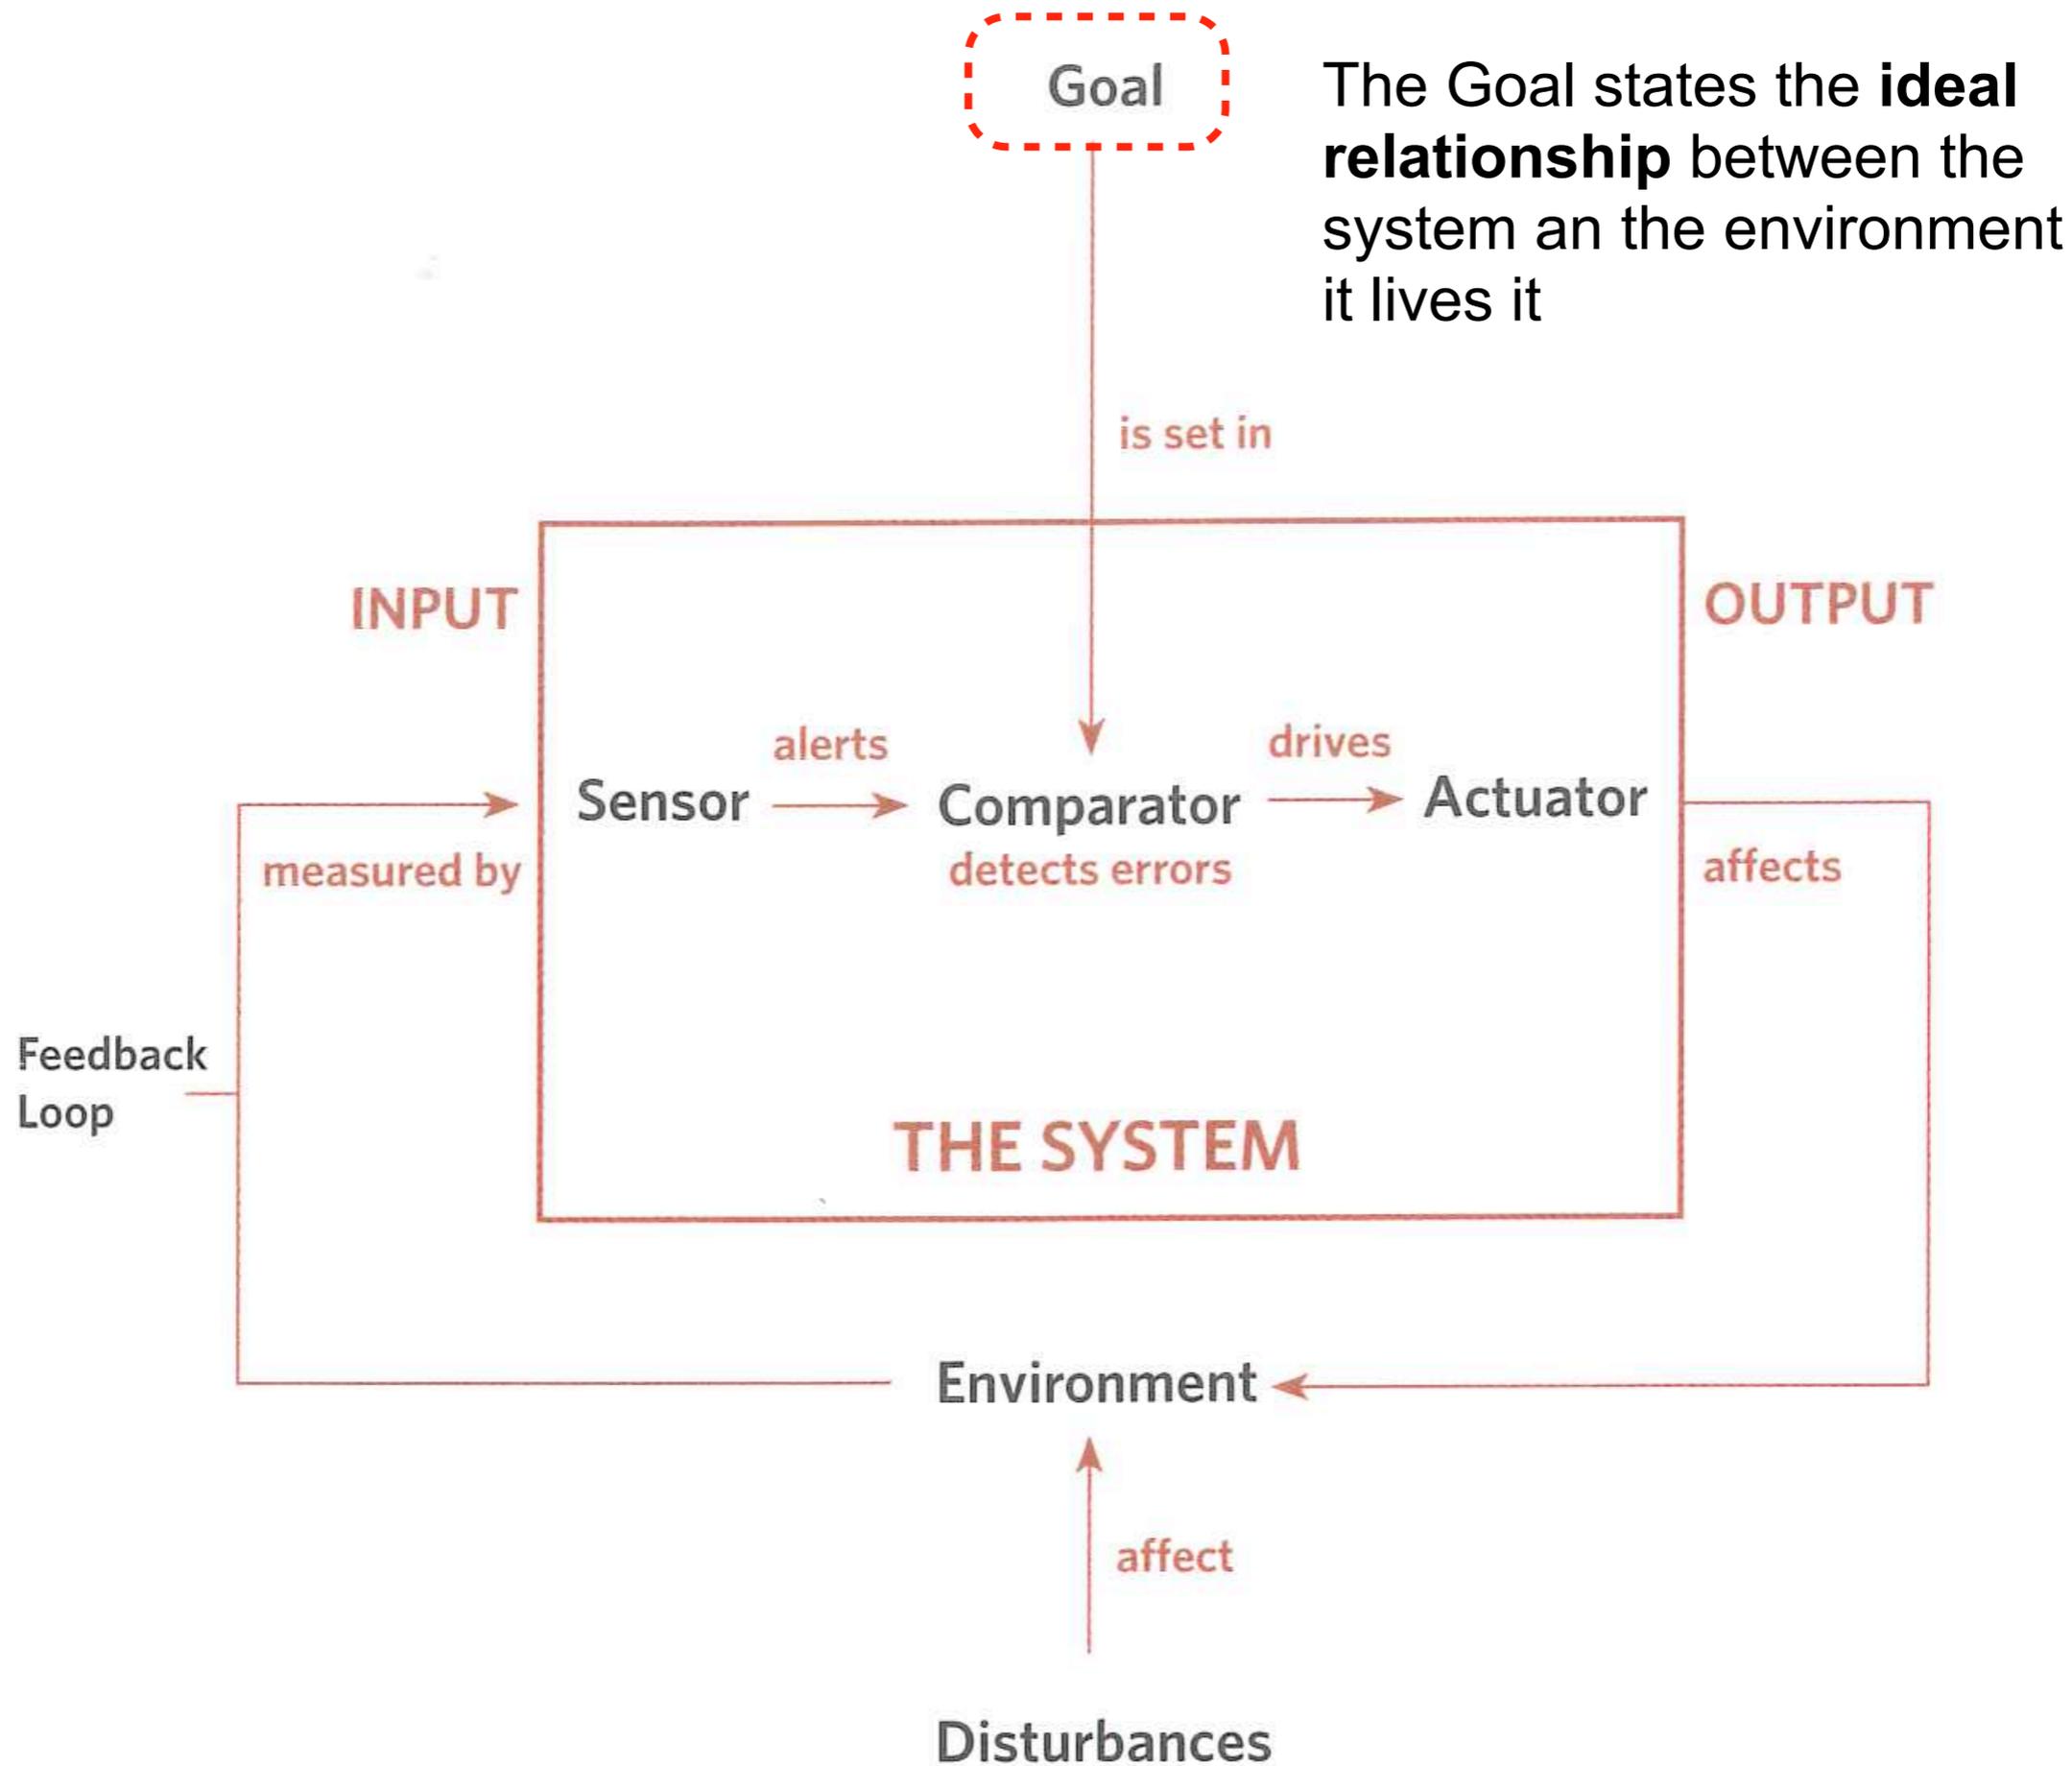

- The Purpose of Different Approaches
- Four Main Approaches
- User Centered Design (UCD)
- Activity Centered Design
- Systems Design
- Genius Design

Systems Design

- Analytical method of approaching design problems
- A set of entities that act upon each other is center of the design process
- Systems can range from simple (heating system in a house) to the enormously complex (power-plant)
- Systems design is a structured, rigorous design methodology
- Excellent for tackling complex problems
- Holistic design approach (focus on the context of use)
- Systems design outlines the components that systems should have:
A **goal**, a **sensor**, a **comparator** and an **actuator** (these parts are shaped by the interaction designer)
- Compared to other approaches systems design provides a clear roadmap for designers to follow

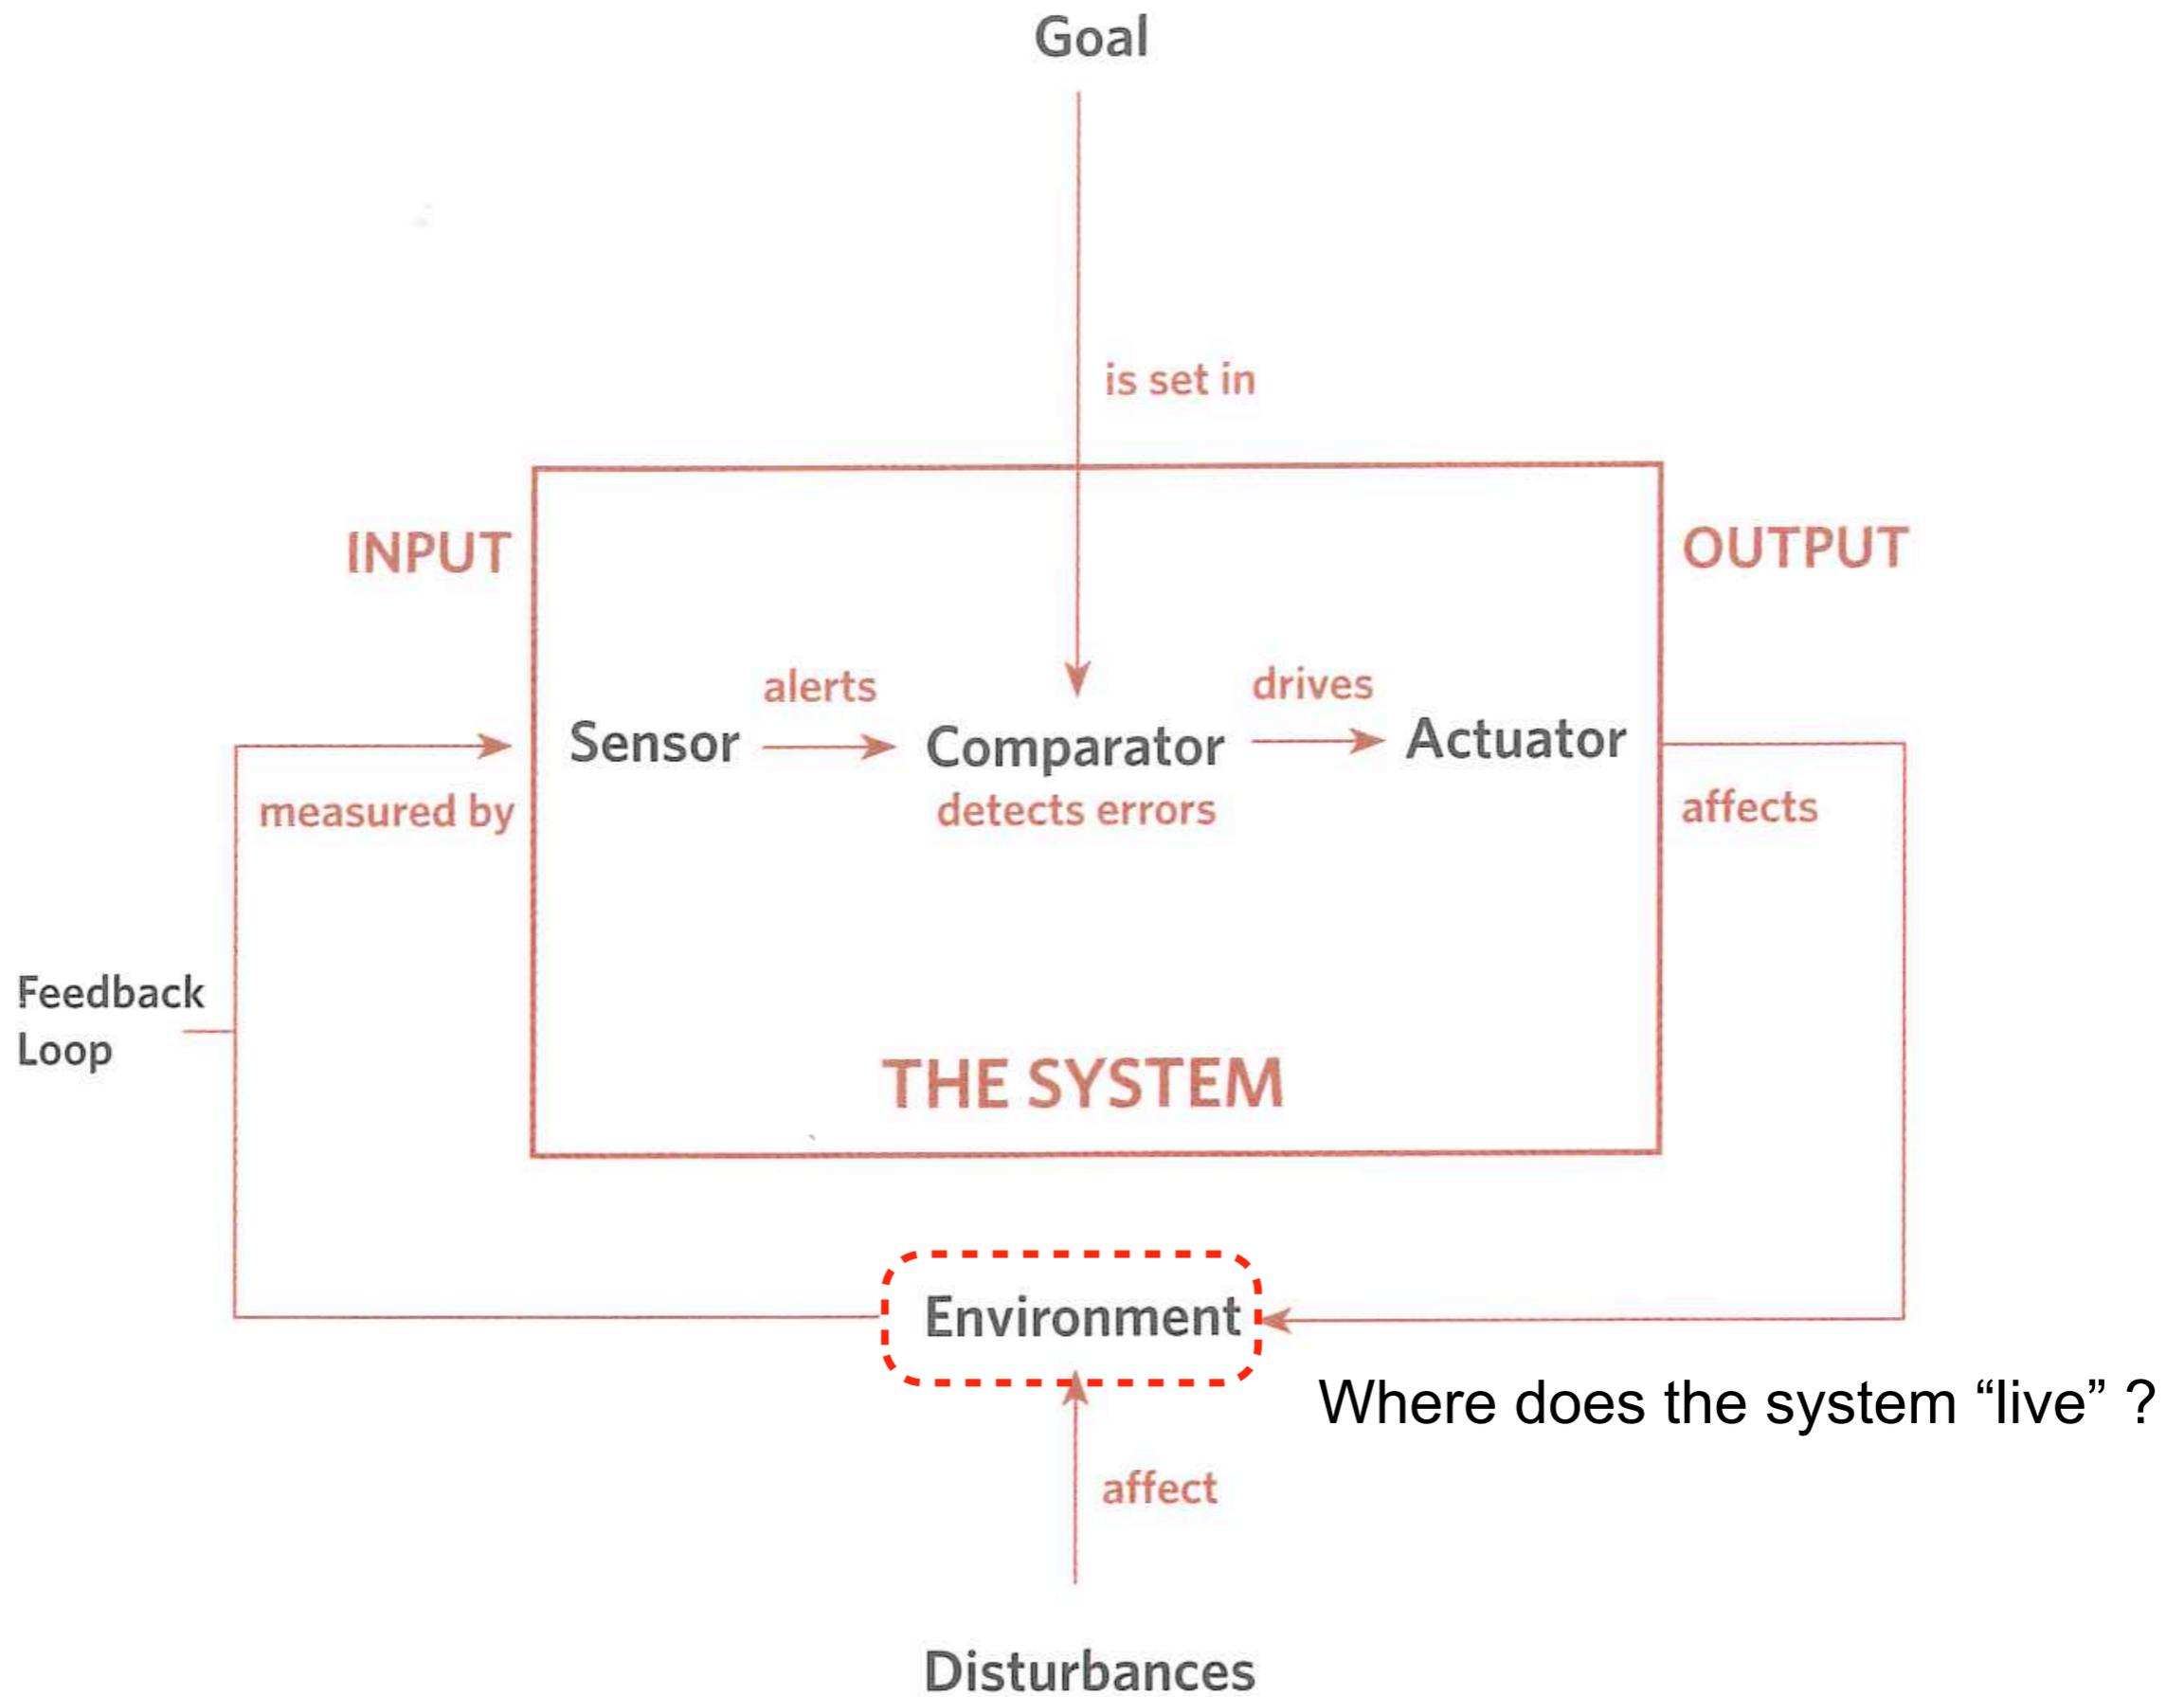

source: [5]

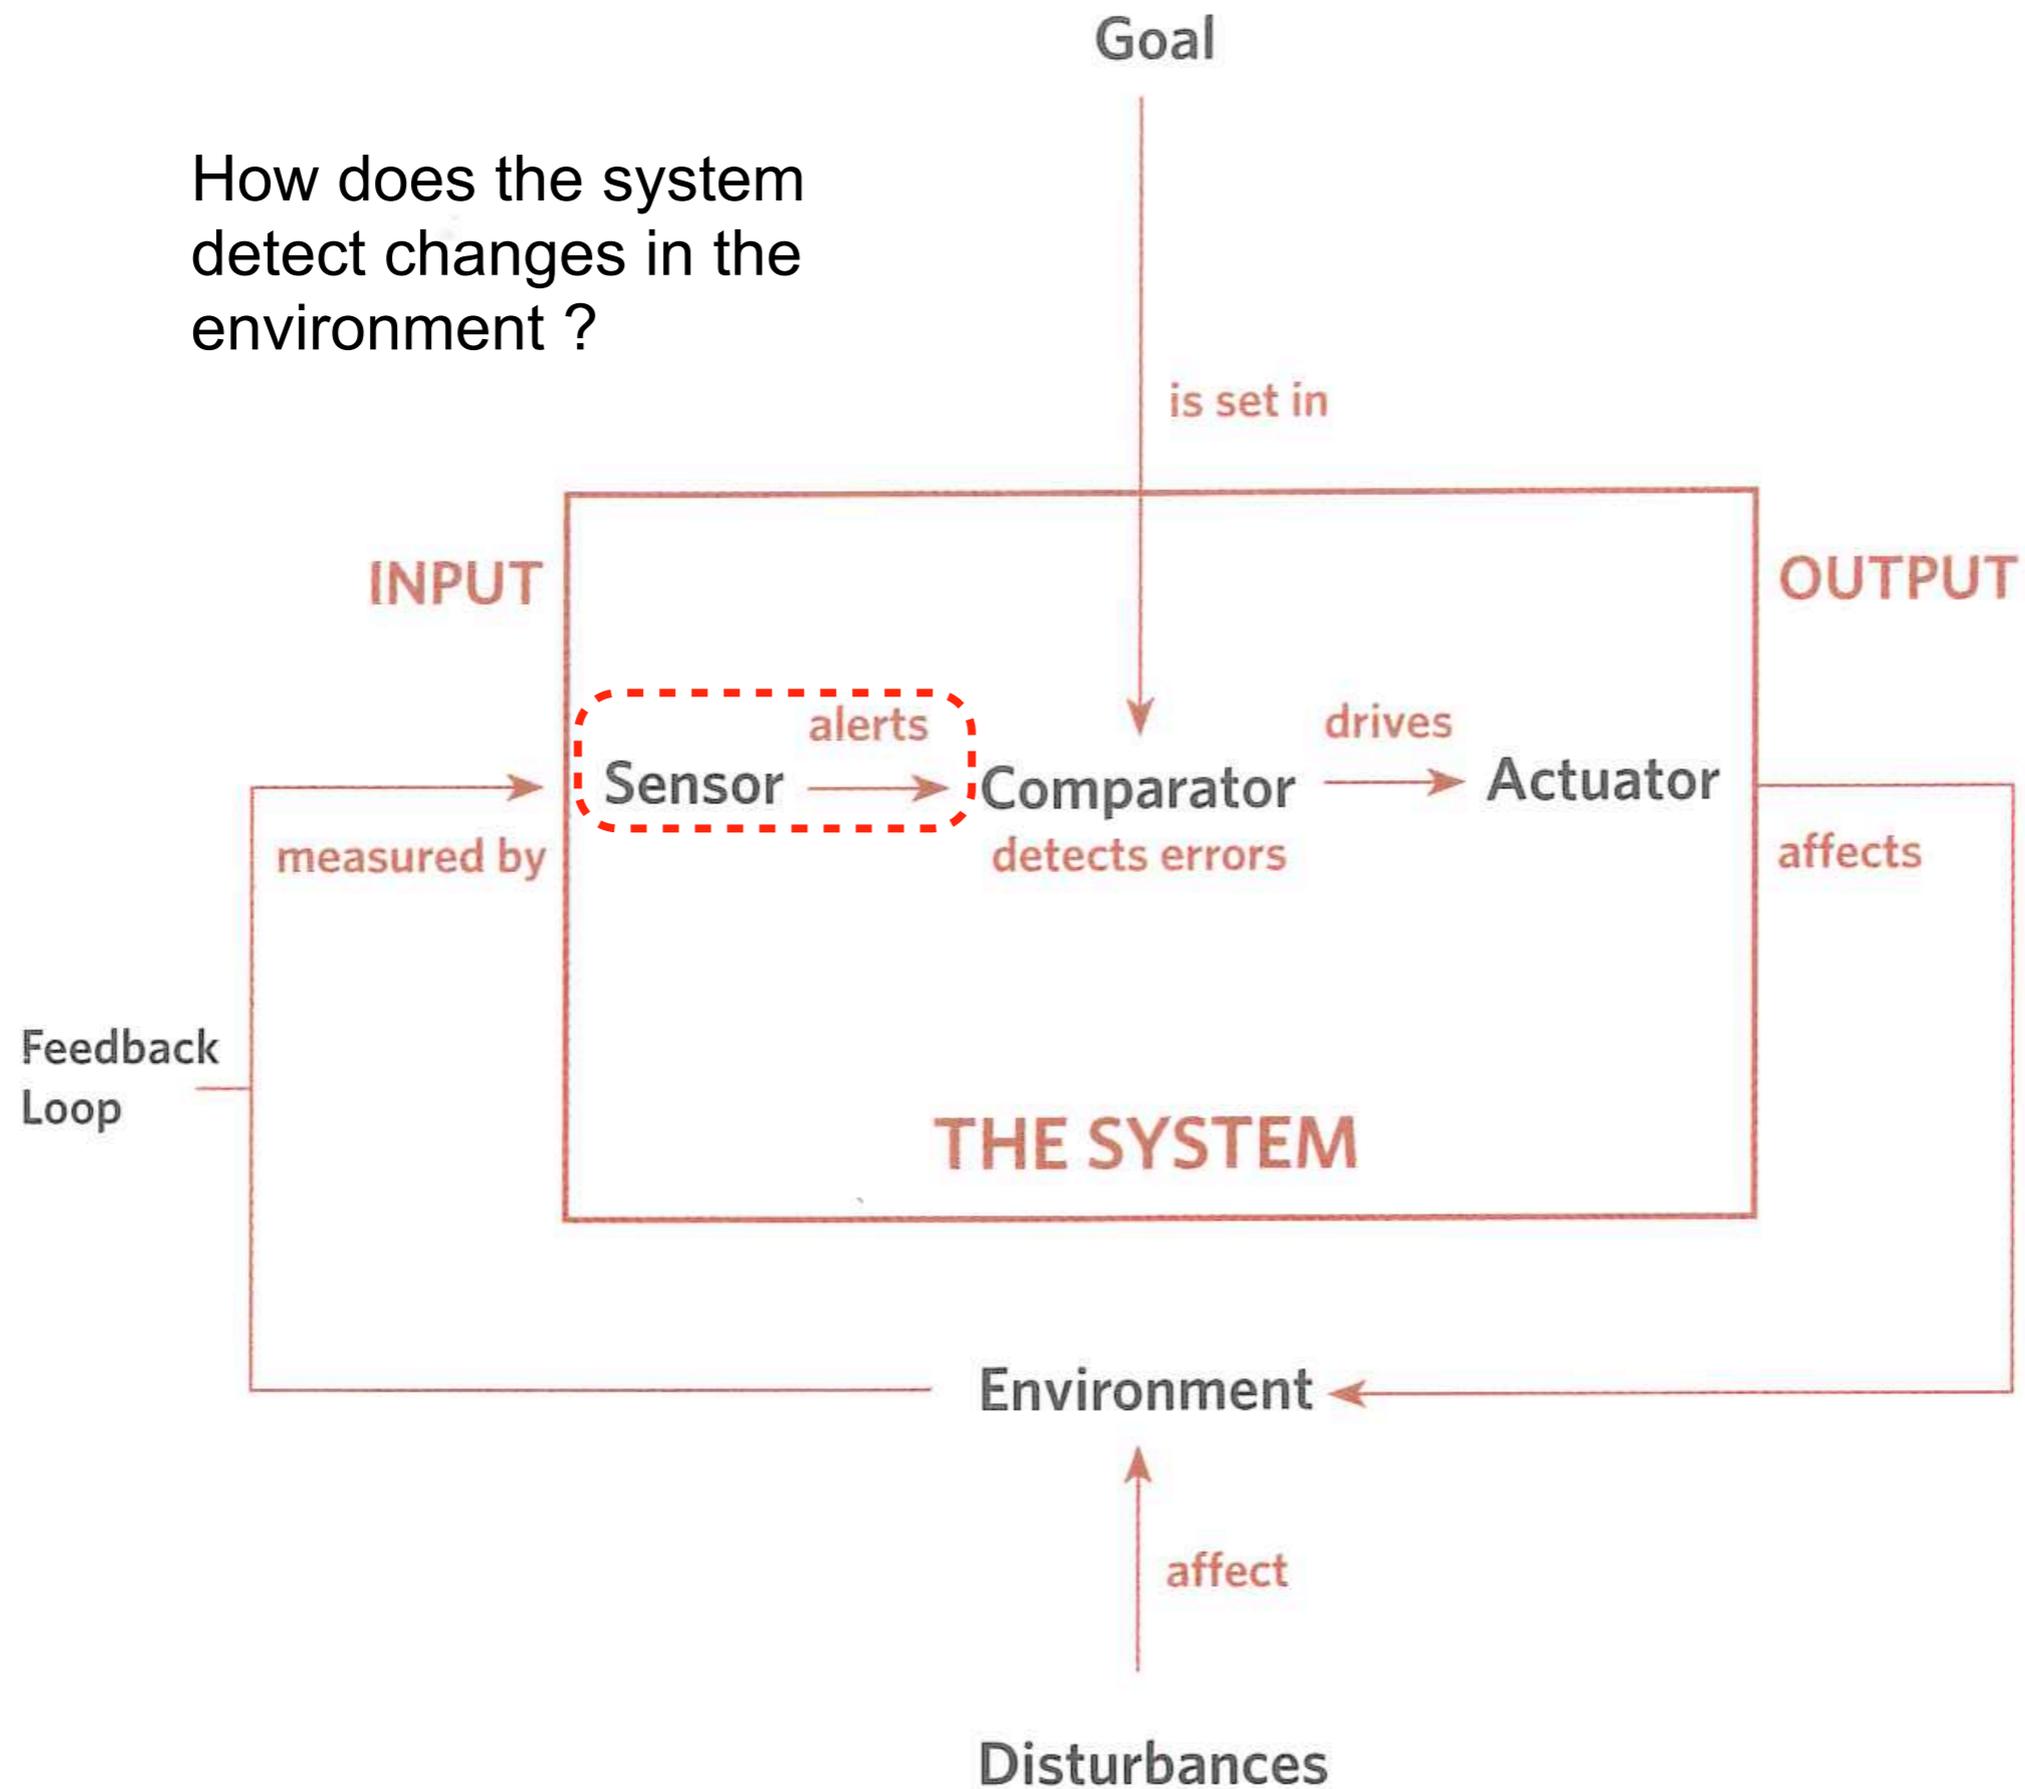

The Goal states the **ideal relationship** between the system and the environment it lives in

source: [5]

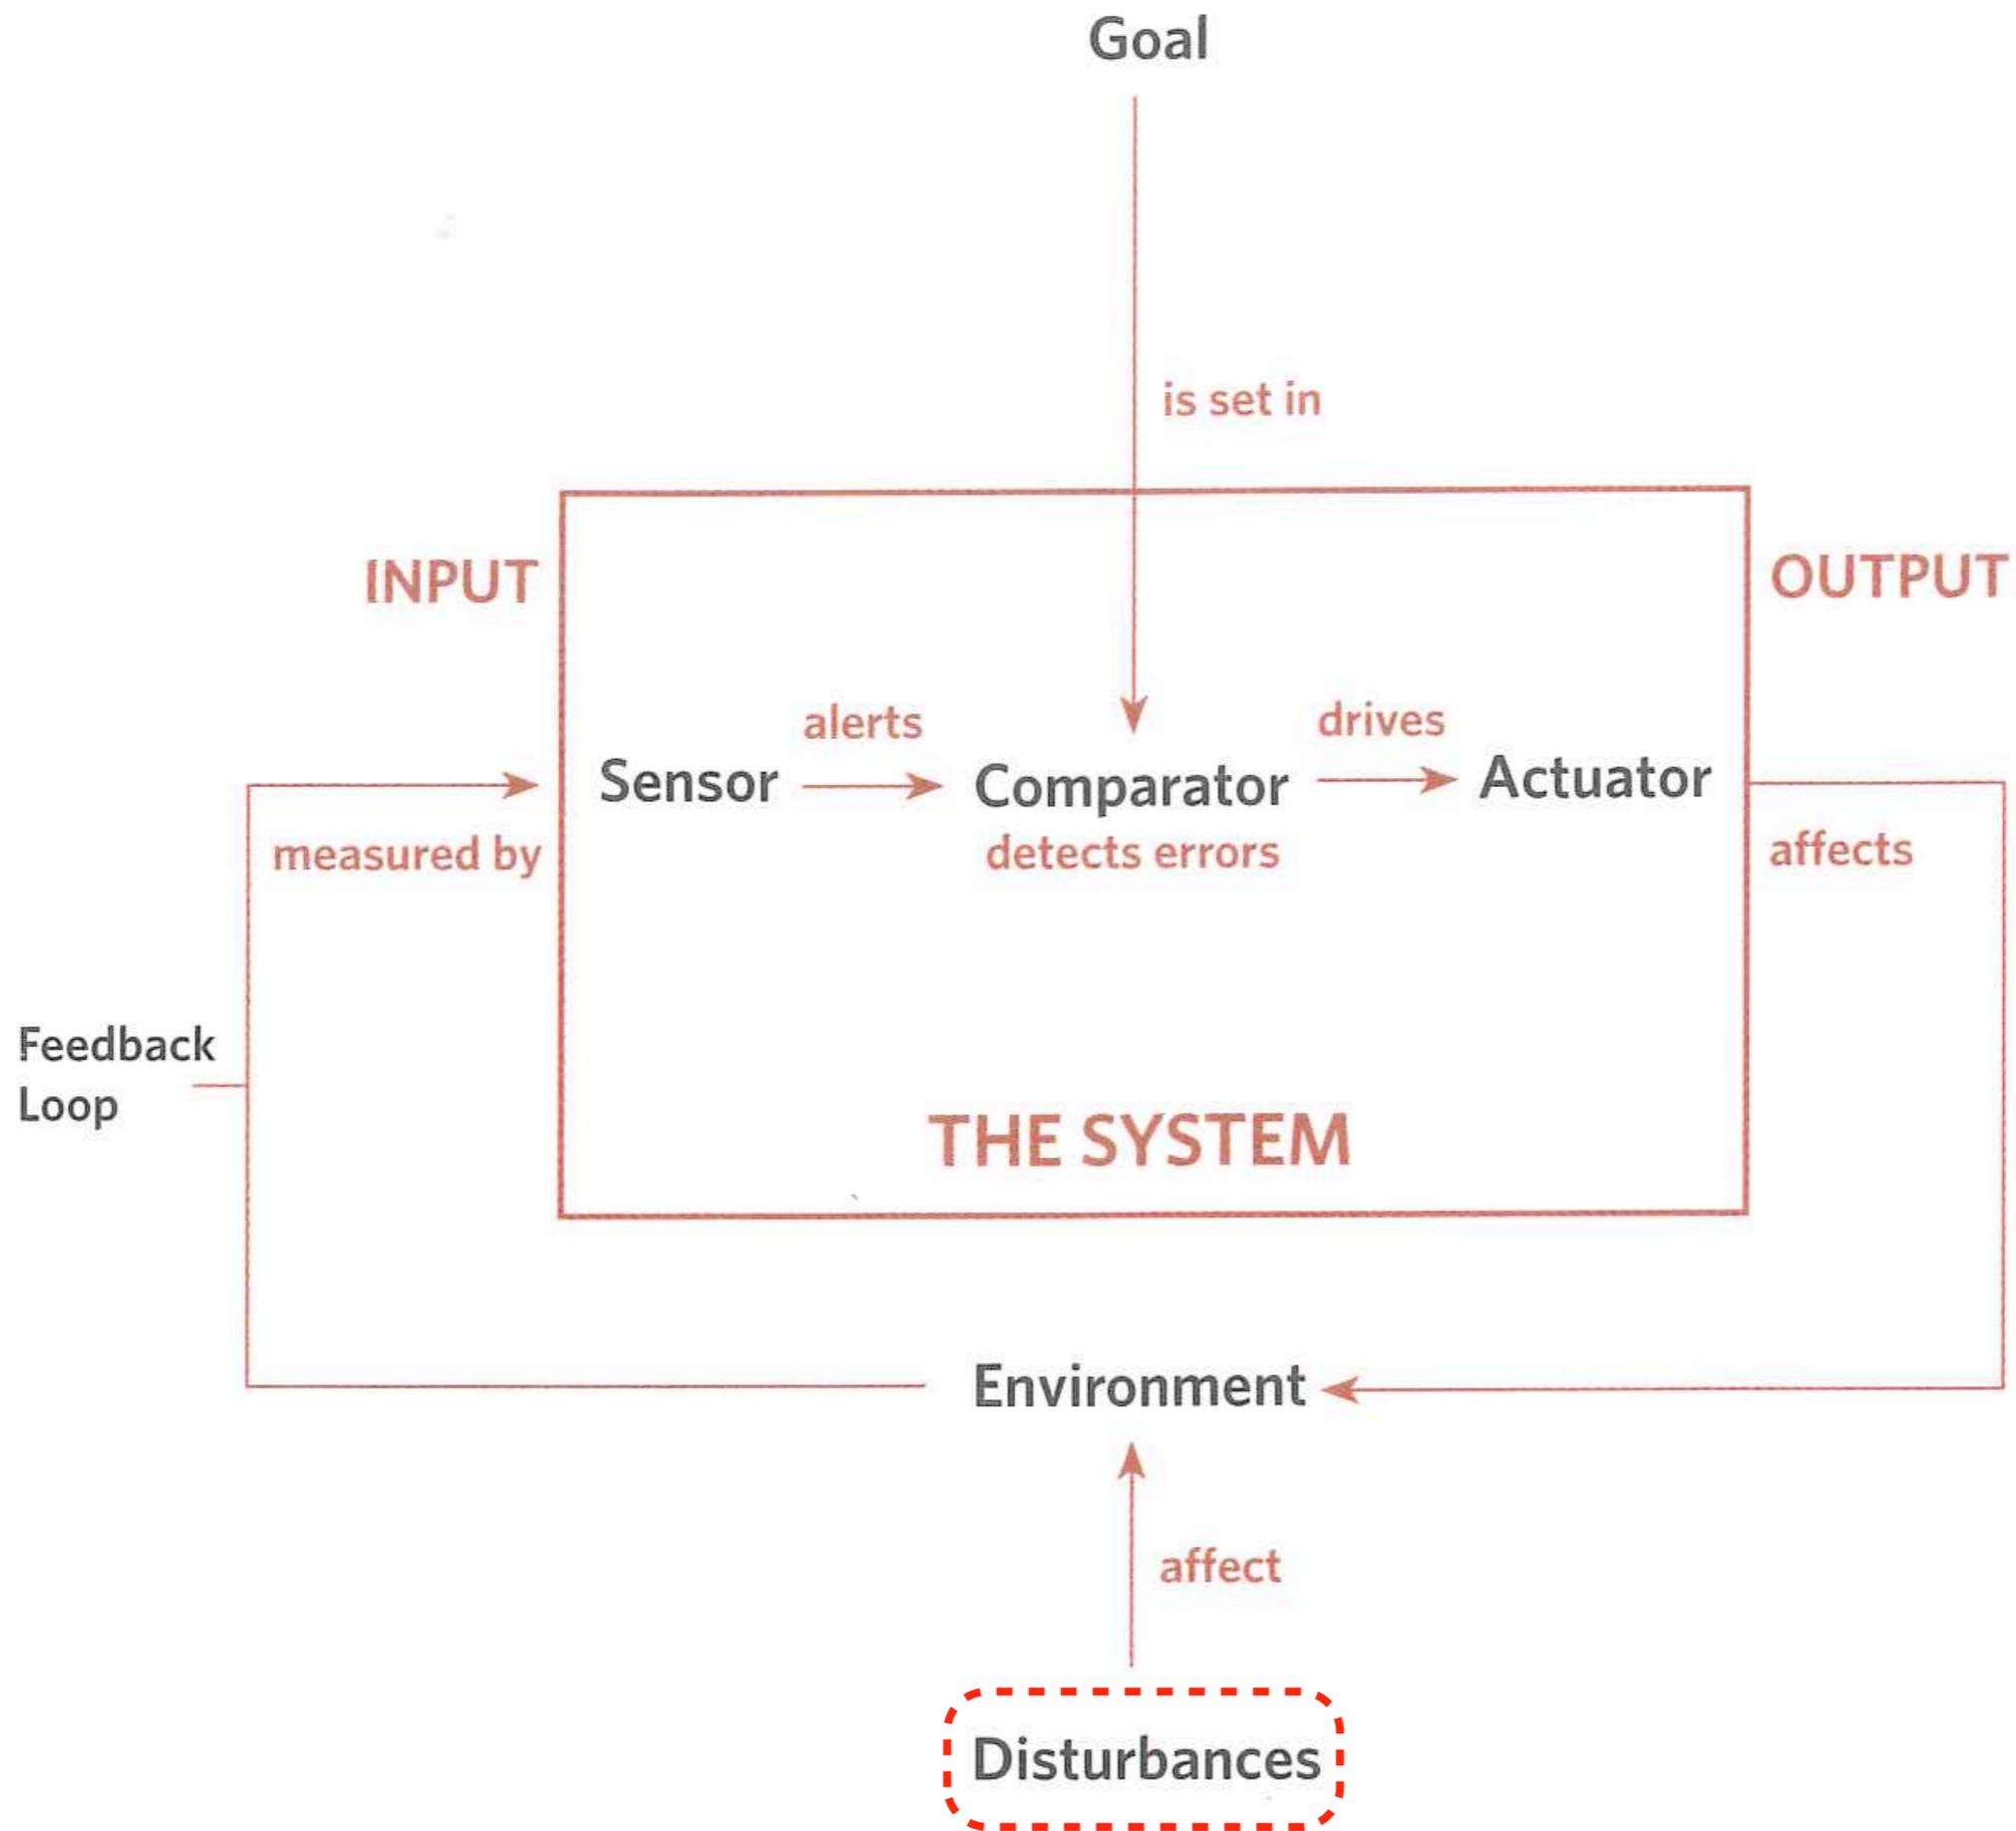

source: [5]

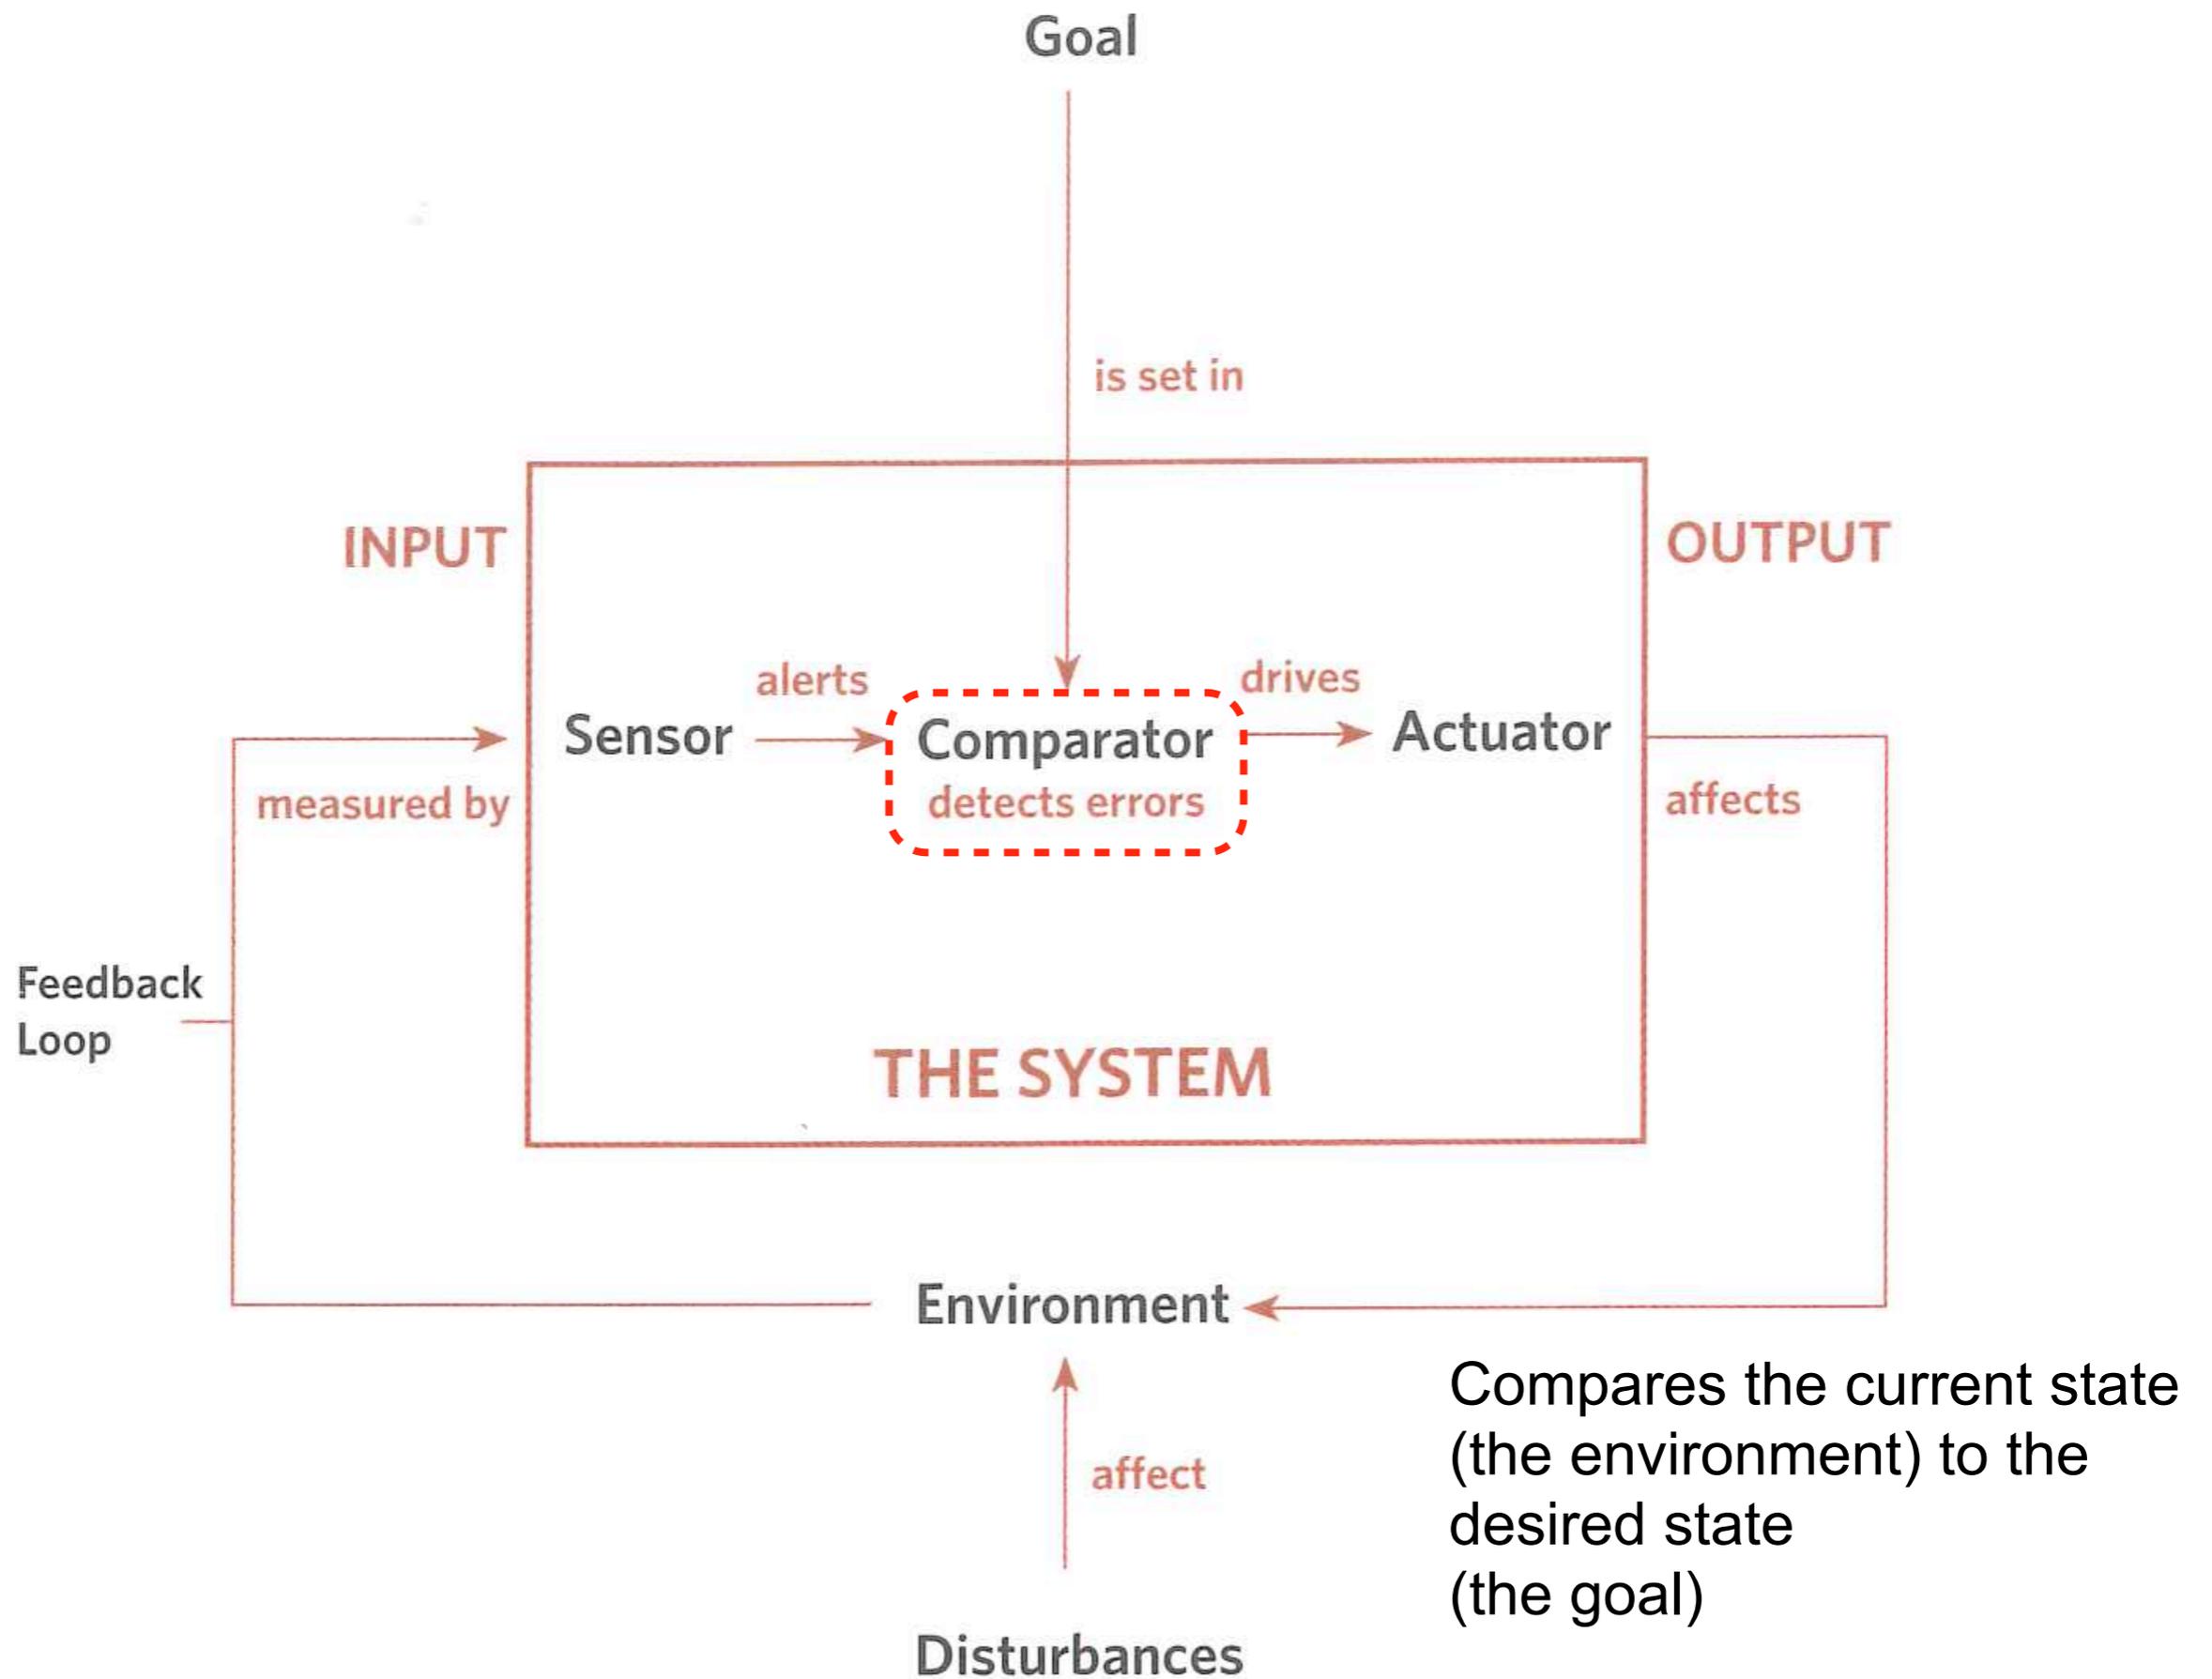

How does the system detect changes in the environment ?

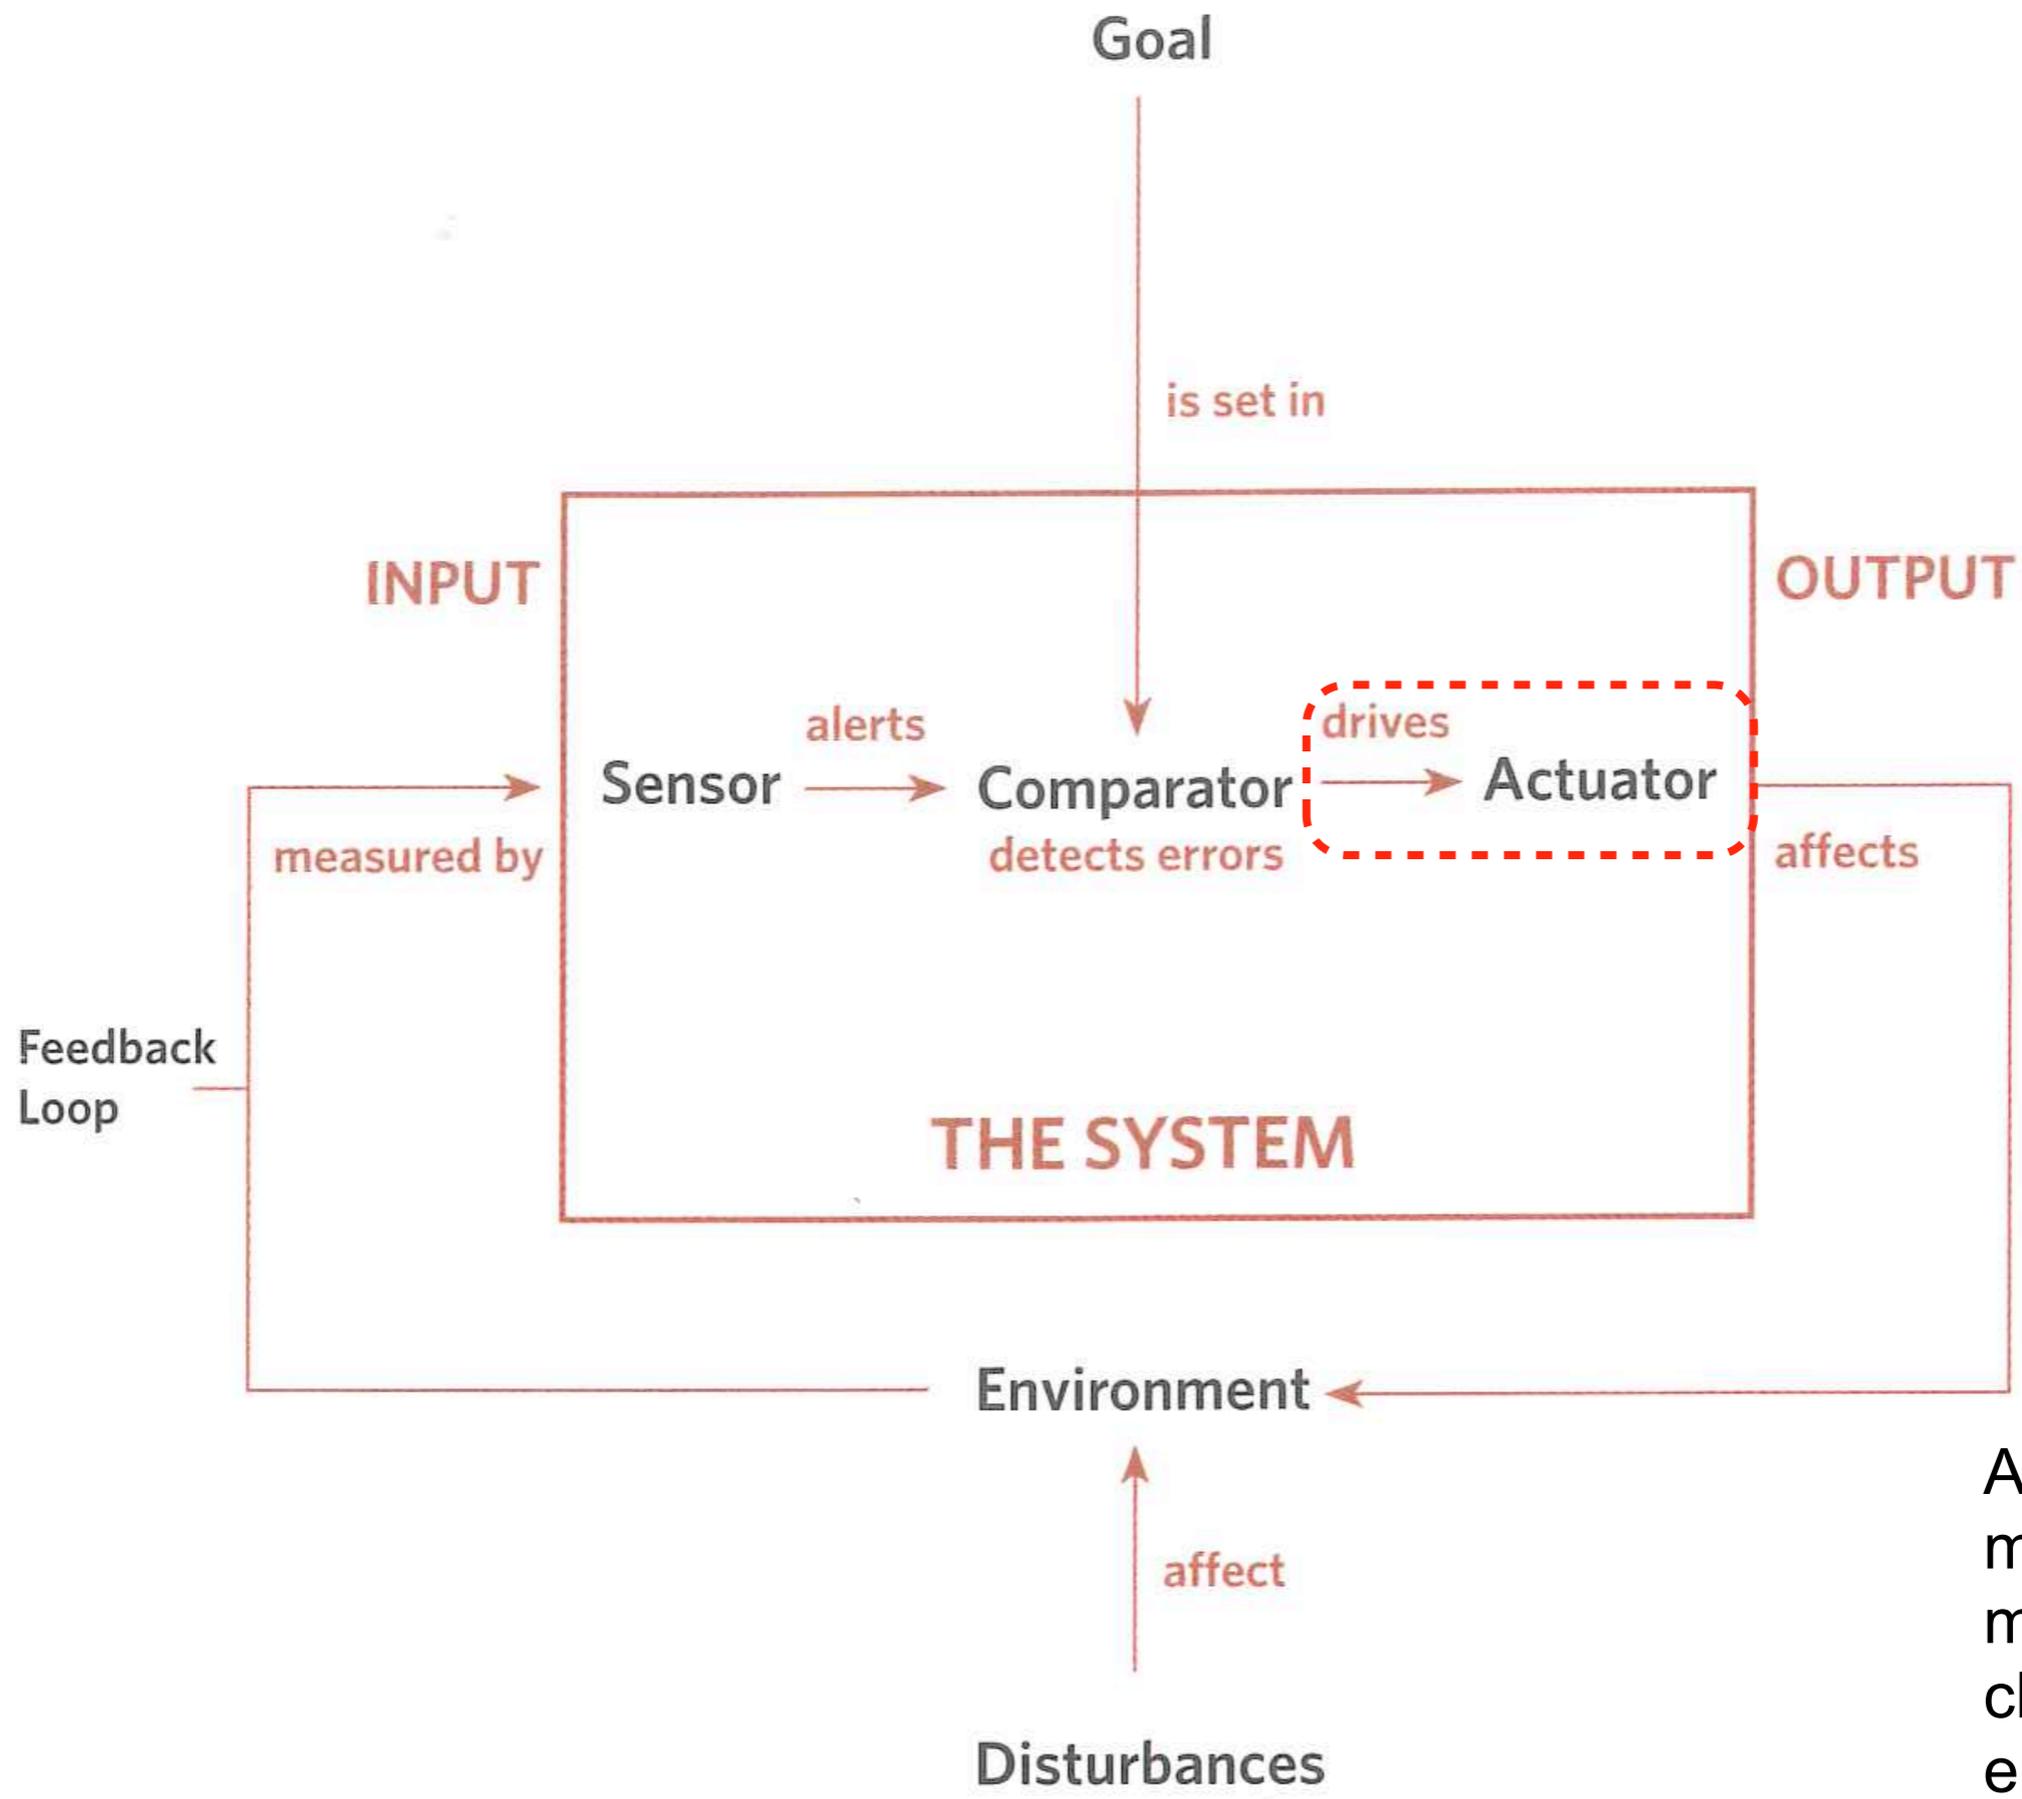

source: [5]

source: [5]

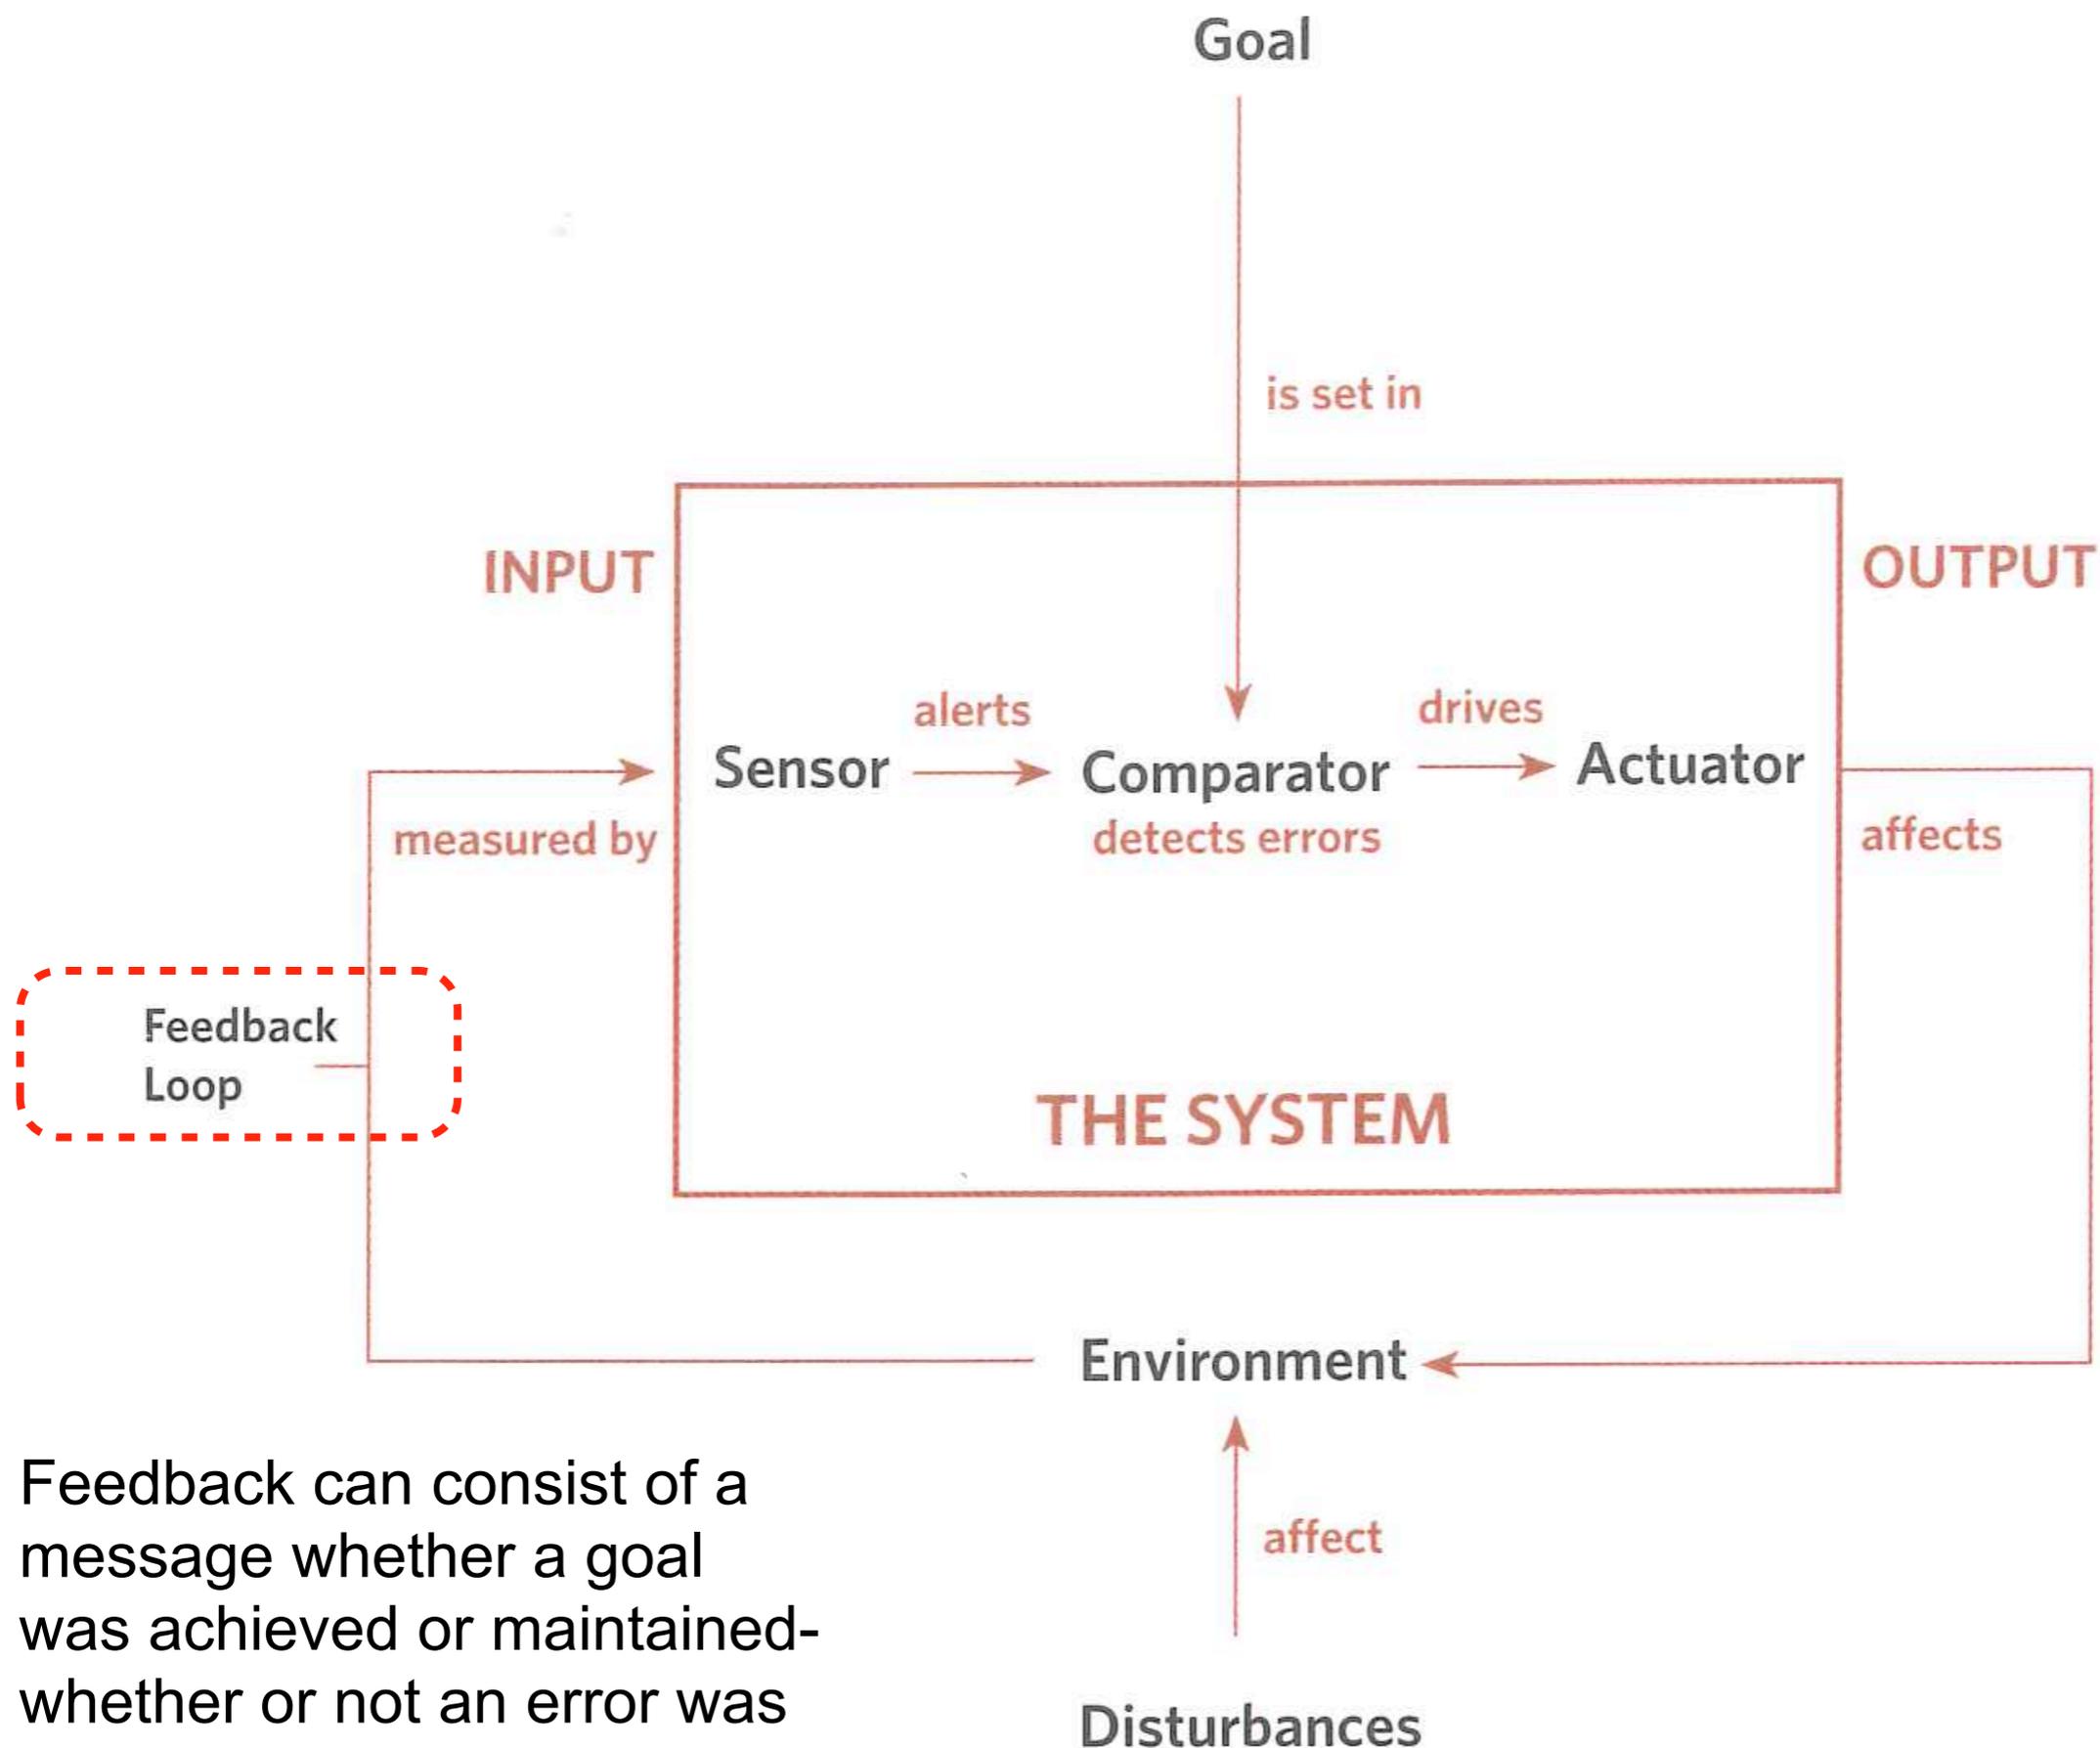

source: [5]

Actuators are means of making changes to the environment

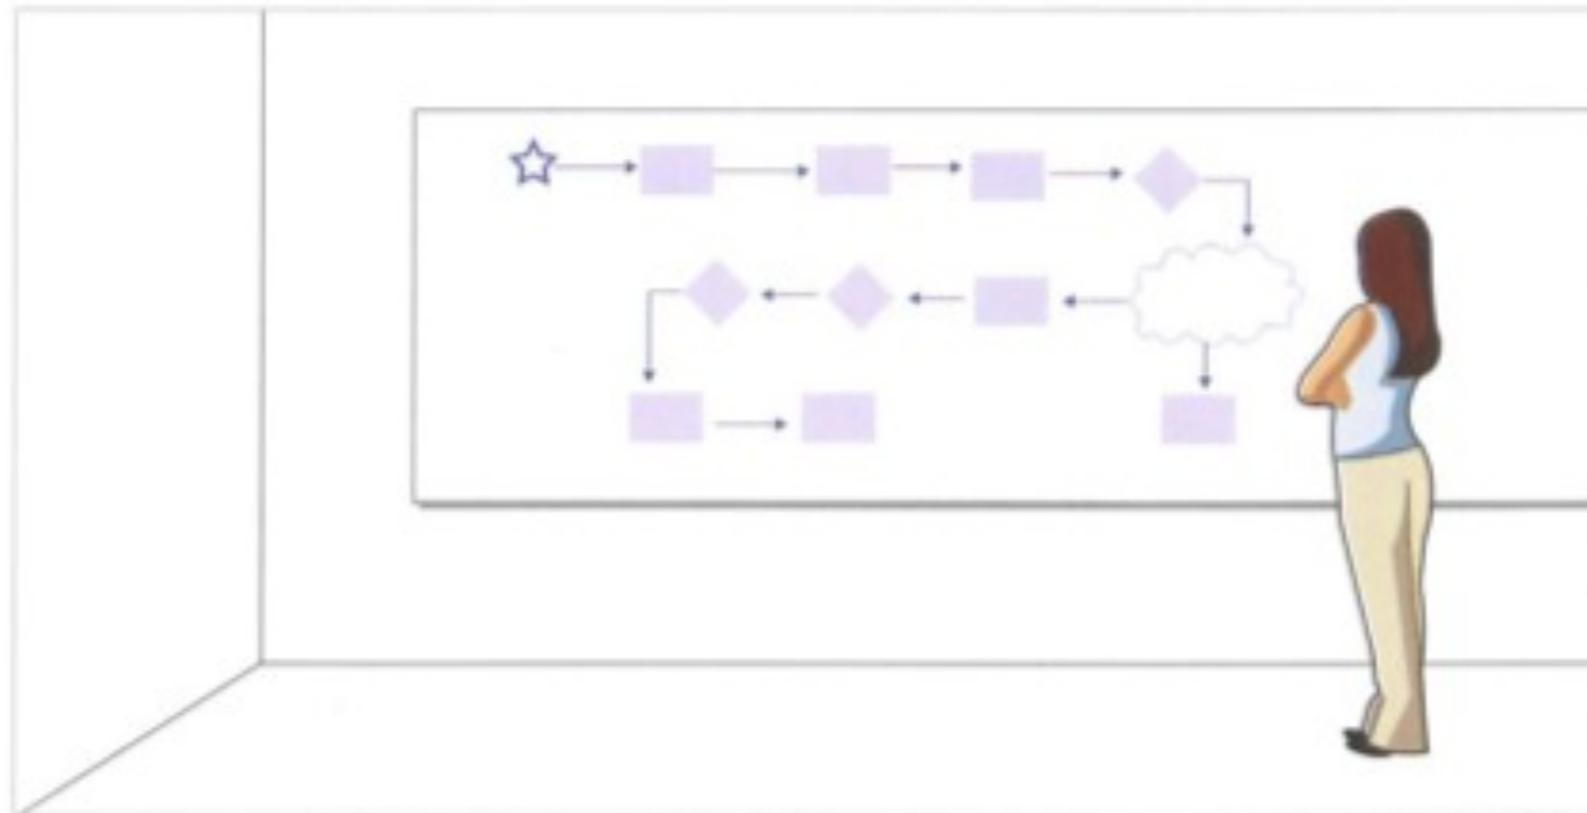

source: [5]

Feedback can consist of a message whether a goal was achieved or maintained- whether or not an error was detected

source: [5]

Flow Diagram

Represent a series of events, actions or processes of different actors.
Usually have a beginning and an end point.

Unexpected disturbances

- things that fall outside of the expected range of input
- to make unexpected disturbances expected (and thus make the system more stable), systems need what's called **requisite variety**
- the system needs an assortment of responses to deal with a range of situations to prevent the system from failing
- systems without requisite variety can crash

By focusing on the broad context of use and the interplay of the components, interaction designers gain a **better understanding** of a product or a service

source: [5]

Approaches to Interaction Design

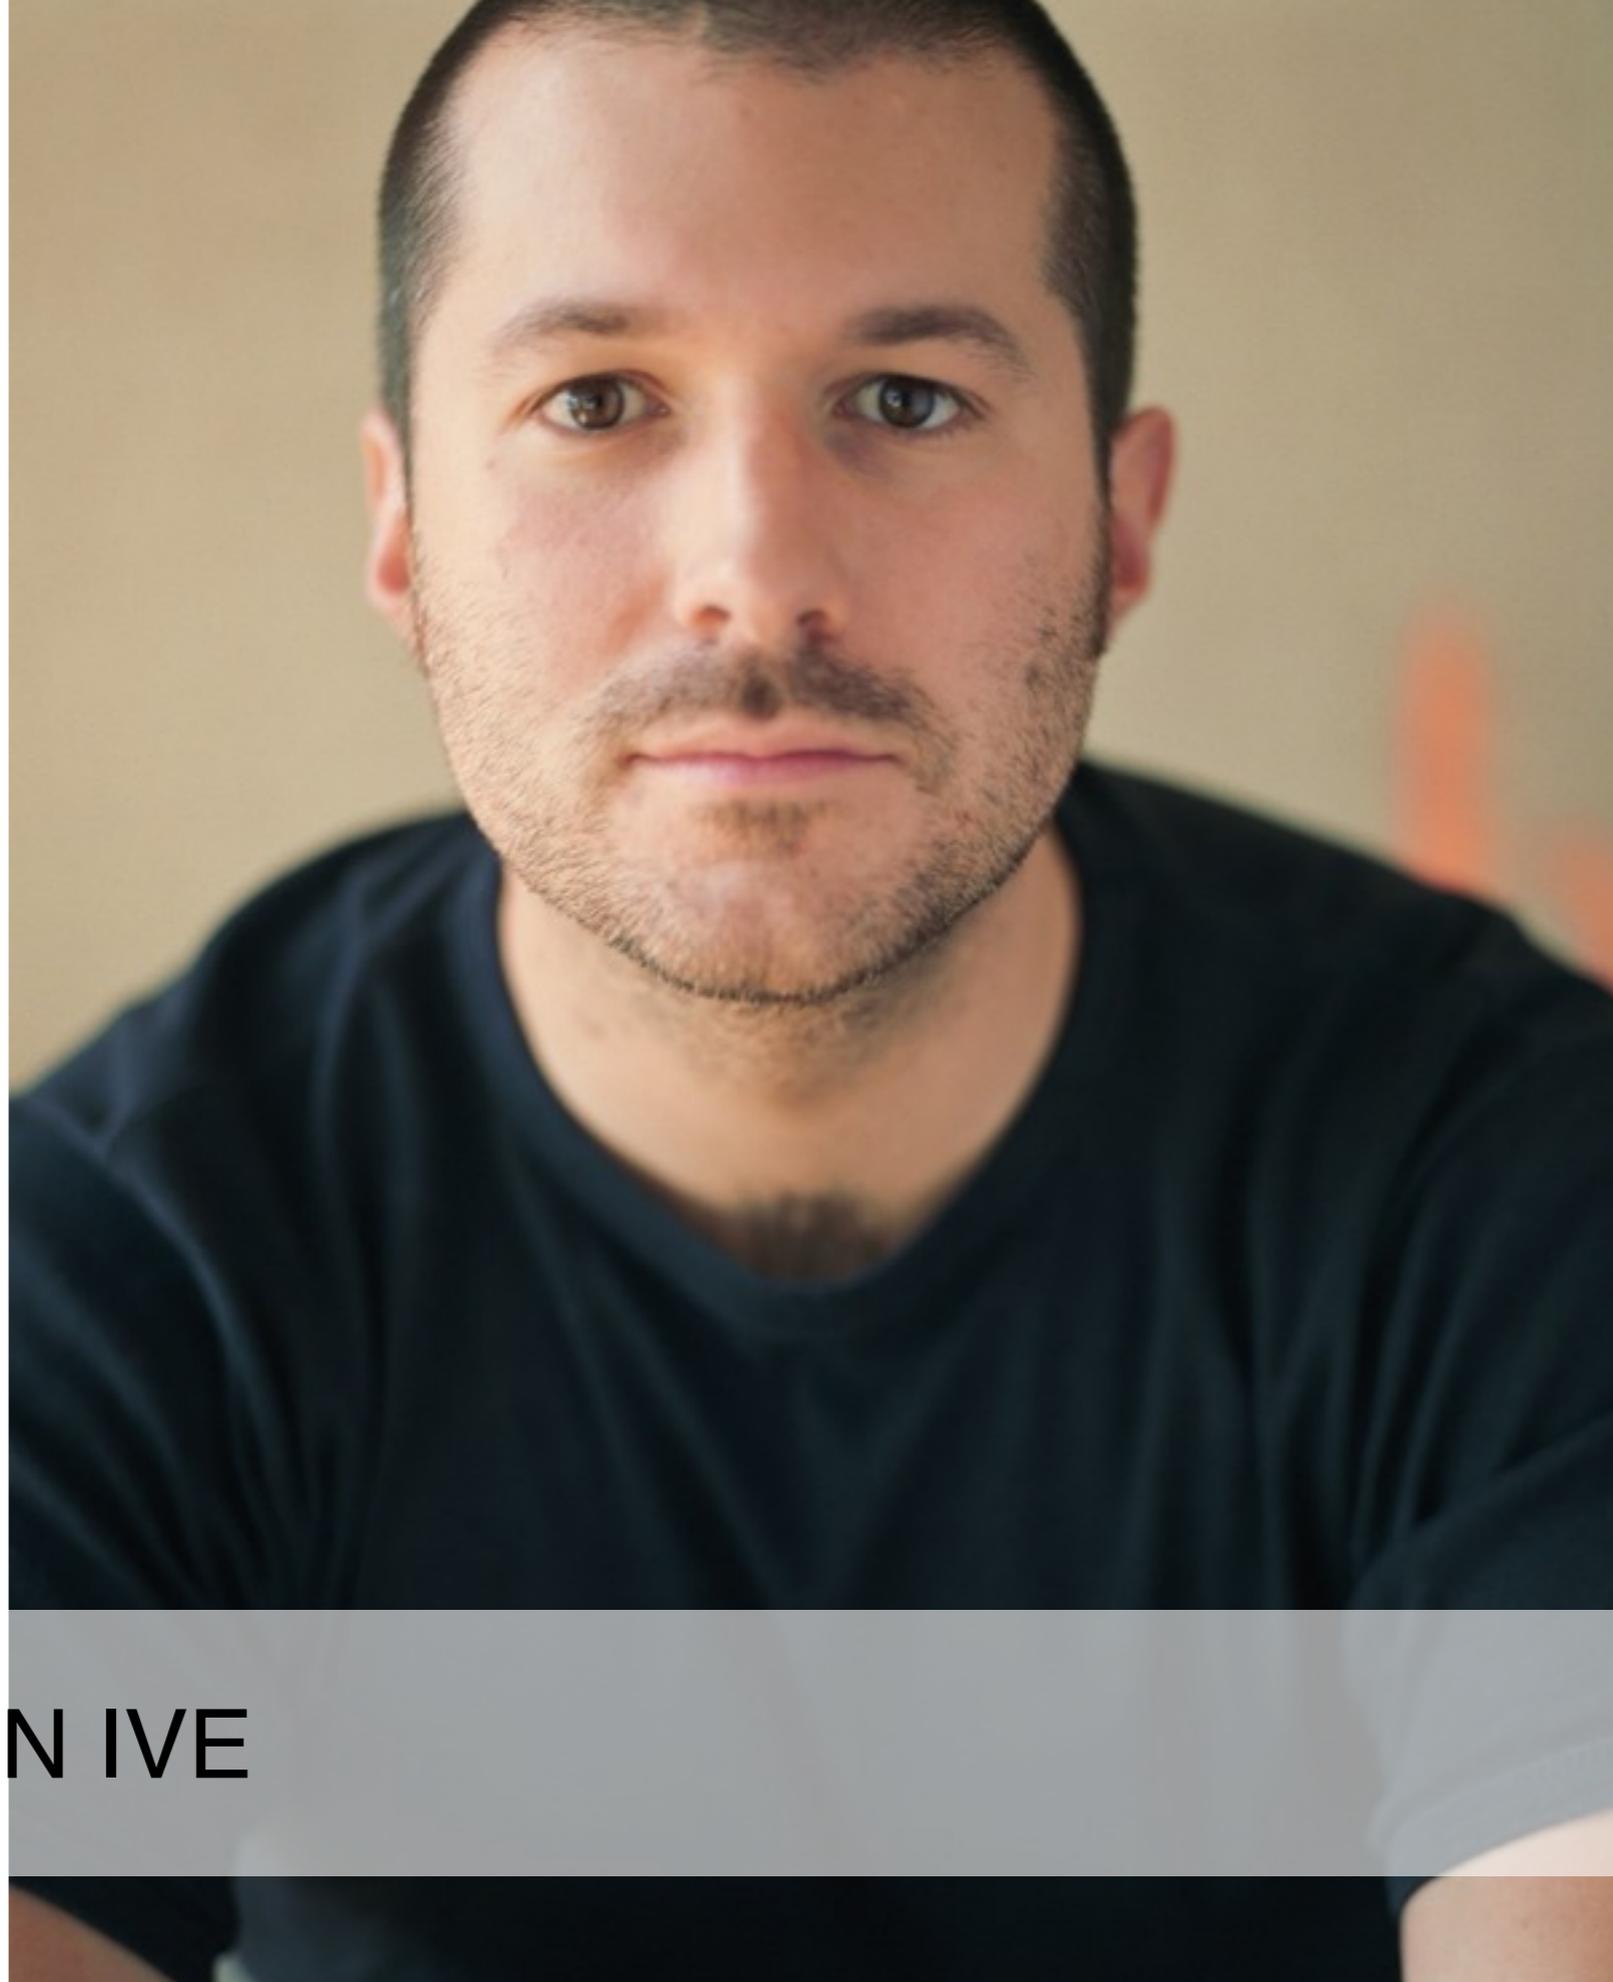

- The Purpose of Different Approaches
- Four Main Approaches
- User Centered Design (UCD)
- Activity Centered Design
- Systems Design
- Genius Design

Genius Design

- Philosophy: Design relies almost solely on the wisdom and experience of the interaction designer making the design decisions.
- Probably best practiced by experienced designers who have encountered several types of problems and can draw solutions from previous design issues
