

Exercise 9

Deadline: 19.07.2013; 12:00 (noon)

This exercise can be completed individually or in groups of two persons.

Task 1: Conduct & Report a User Study (Individual Work or Group Work; 1 Bonus Point)

1. Conduct the Study

Conduct the study you designed in exercise 8. Alternatively, you can conduct the study that is described in study.pdf (which will be available on Friday after the deadline of exercise 8).

2. Evaluate Results

Analyze the data you got from conducting the experiment. Use MS Excel, R or any other program of your choice to do a statistical analysis and to transform them into graphs that summarize the most important results.

3. Report Results

Write a full report about your experiment containing the following sections:

- Title
- Abstract
- Short Introduction
- Method
- Results
- Discussion
- References
- (Appendices)

The report should contain the most important facts about your method (study setup, tasks, participants, additional information that is needed to reproduce your experiment) as well as the graphs, which summarize your findings.

Note: You can write your answers in German.

Submit your solution as PDF using UniWorX.
