

Übung zur Vorlesung Informationsvisualisierung

Emanuel von Zezschwitz
Ludwig-Maximilians-Universität München
Wintersemester 2014/2015

Organisatorisches

- Informationen zu Vorlesung & Übung
<http://www.medien.ifi.lmu.de/lehre/ws1415/iv/>
- Anmeldung über Uniworx:
<https://uniworx.ifi.lmu.de/?action=uniworxCourseWelcome&id=311>
- **Phase 1: Übungsblätter - Verständnis- und Klausuraufgaben (freiwillig)**
- **Phase 2: Projekt (freiwillig, 5%-10% Klausurbonus)**

Weitere Informationen

- Informatiker Forum
<http://www.die-informatiker.net/>
- Mimuc Twitter Account (inoffiziell)
<http://twitter.com/mimuc>
- Medieninformatik LMU Facebook Gruppe (inoffiziell)
<https://www.facebook.com/groups/36775131102/>

Einbringung ins Studium

- **Master**
 - **Modul:** WP16: Computergrafik 3 (für Master Medieninformatik)
 - **ECTS-Credits:** 6
 - **Note:** Teilnahme an Klausur
- **Diplom**
 - **SWS:** 2 (Vorlesung) + 2 (Übung)
 - **MM-Säule (Butz)**
 - **Note:** Teilnahme an Klausur

Klausur

- **Termin: 03.02.2015, 10:00-12:00 Uhr**
Ort: Geschwister-Scholl-Platz 1, Raum B 101
- **Closed Book**
- Klausurvorbereitung in den Übungen in der Woche vor der Klausur

Visualization

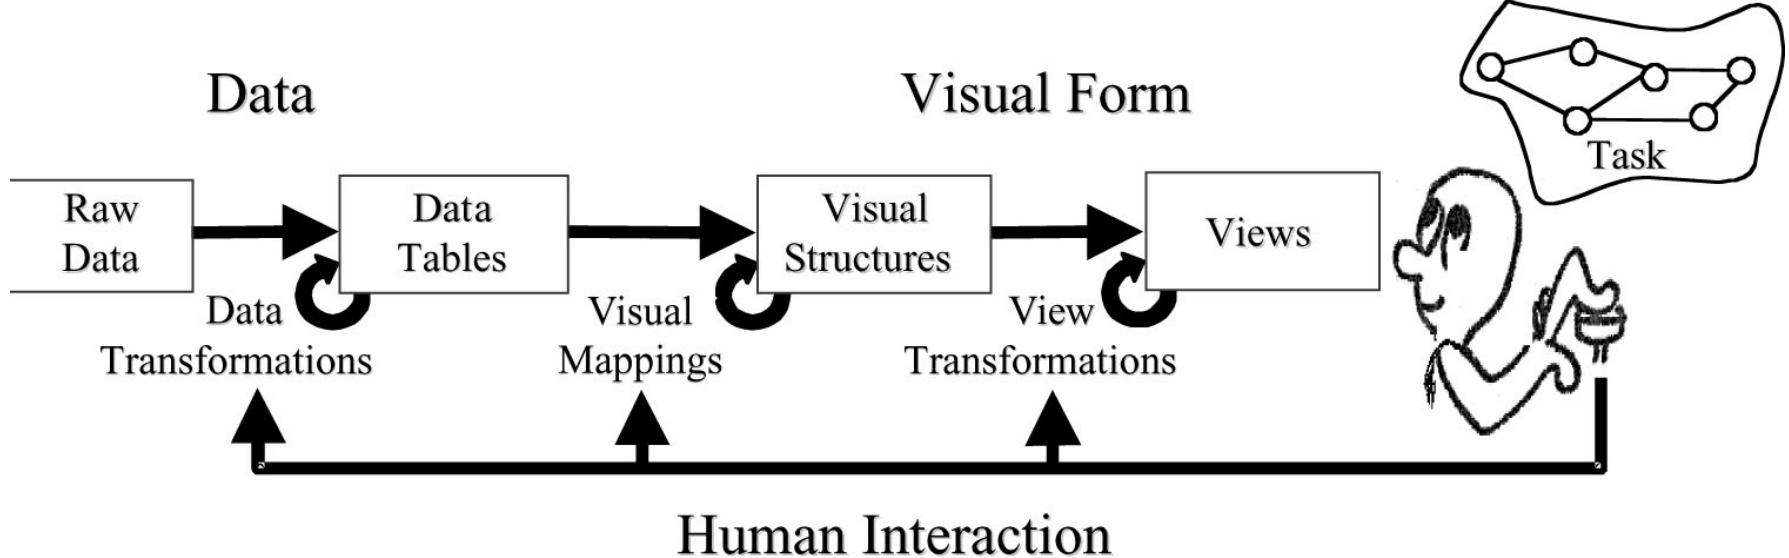

© <http://philip.greenspun.com/>

“Graphical excellence is that which gives to the viewer the **greatest number of ideas** in the **shortest time** with the **least ink in the smallest space**.“

Edward Tufte [1]

InfoVis Reference Model

Raw Data: idiosyncratic formats

Data Tables: relations (cases by variables) + meta-data

Visual Structures: spatial substrates + marks + graphical properties

Views: graphical parameters (position, scaling, clipping, ...)

Card et al. 1999

Lie Factor

“The representation of numbers, as physically measured on the surface of the graphic itself, should be directly proportional to the quantities represented.”

Edward Tufte [1]

Lie Factor

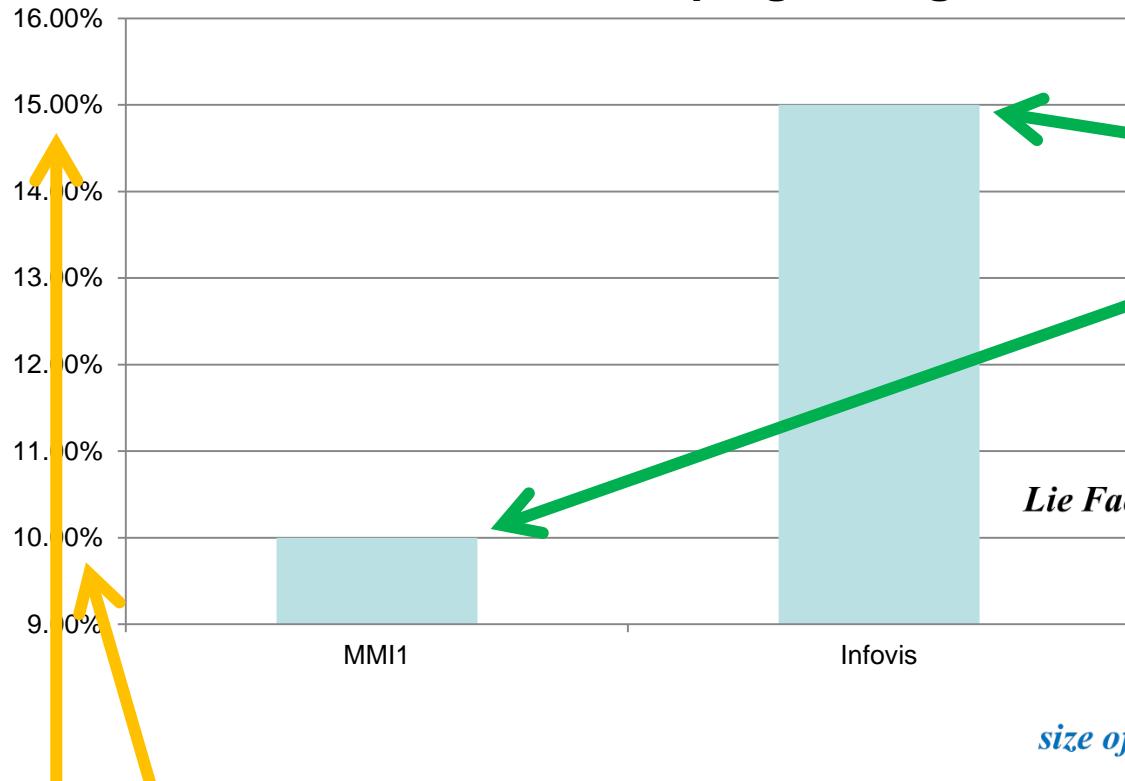

$$Lie\ Factor = \frac{\text{size of effect shown in graphic}}{\text{size of effect in data}}$$

$$\text{size of effect} = \frac{|\text{second value} - \text{first value}|}{\text{first value}}$$

should be close to 1

Lie Factor

amount of students sleeping during lectures

$$\frac{|15 - 10|}{10} = 0.5$$

size of effect in data

size of effect in graph

$$\frac{|6 - 1|}{1} = 5$$

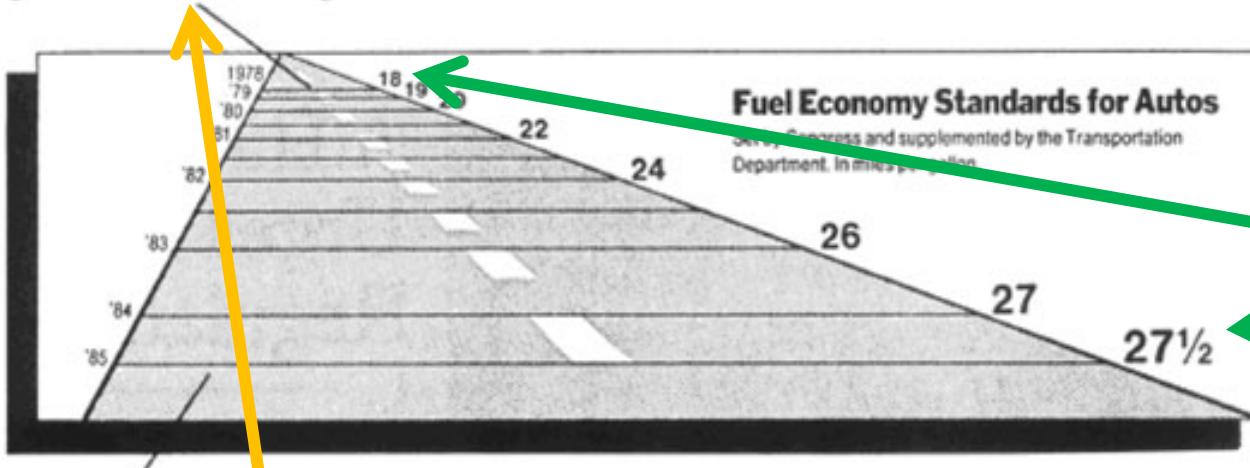

Lie Factor = $\frac{\text{size of effect shown in graphic}}{\text{size of effect in data}}$

$$\text{size of effect} = \frac{|\text{second value} - \text{first value}|}{\text{first value}}$$

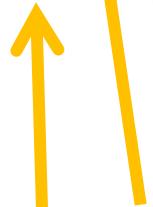

$$\text{Lie Factor} = \frac{5}{0.5} = 10$$

Lie Factor

This line, representing 18 miles per gallon in 1978, is 0.6 inches long.

This line, representing 27.5 miles per gallon in 1985, is 5.3 inches long.

$$\frac{|5.3 - 0.6|}{0.6} = 7.83$$

size of effect in graph

$$Lie\ Factor = \frac{7.83}{0.53} = 14,8$$

Lie Factor?

MONSTROUS COSTS

Total House and Senate campaign expenditures, in millions

MONSTROUS COSTS
Total House and Senate campaign expenditures, in millions

by Nigel Holmes [2]

Data-Ink Ratio

“A large share of ink on a graphic should present data-information, the ink changing as the data change. Data-ink is the non-erasable core of a graphic, the non-redundant ink arranged in response to variation in the numbers represented.”

Edward Tufte [1]

Data-Ink Ratio

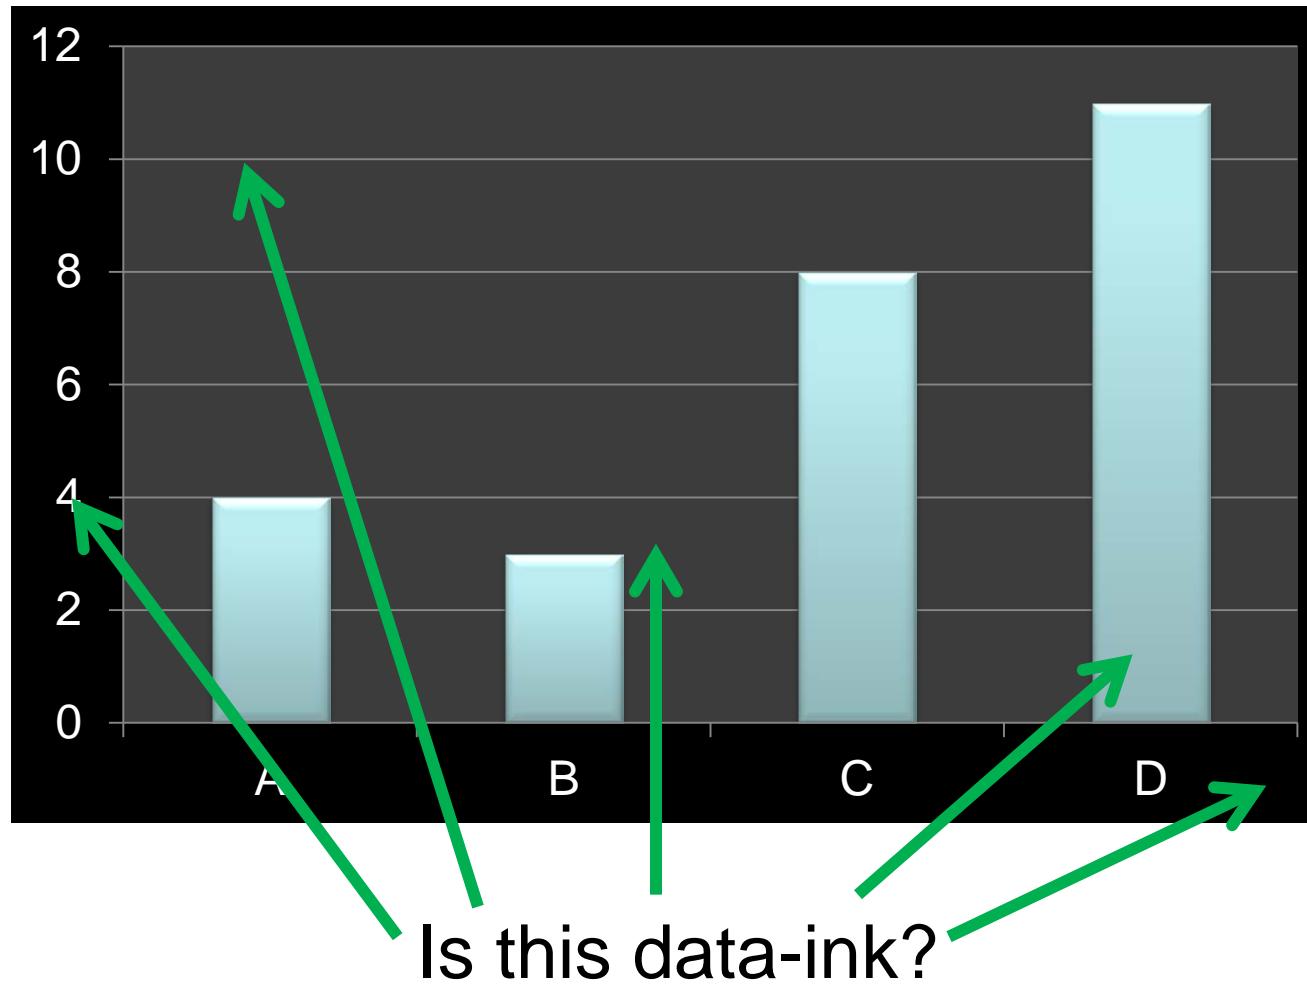

$$\textit{Data-ink ratio} = \frac{\text{Data-ink}}{\text{Total ink used in the graphic}}$$

should be close to 1

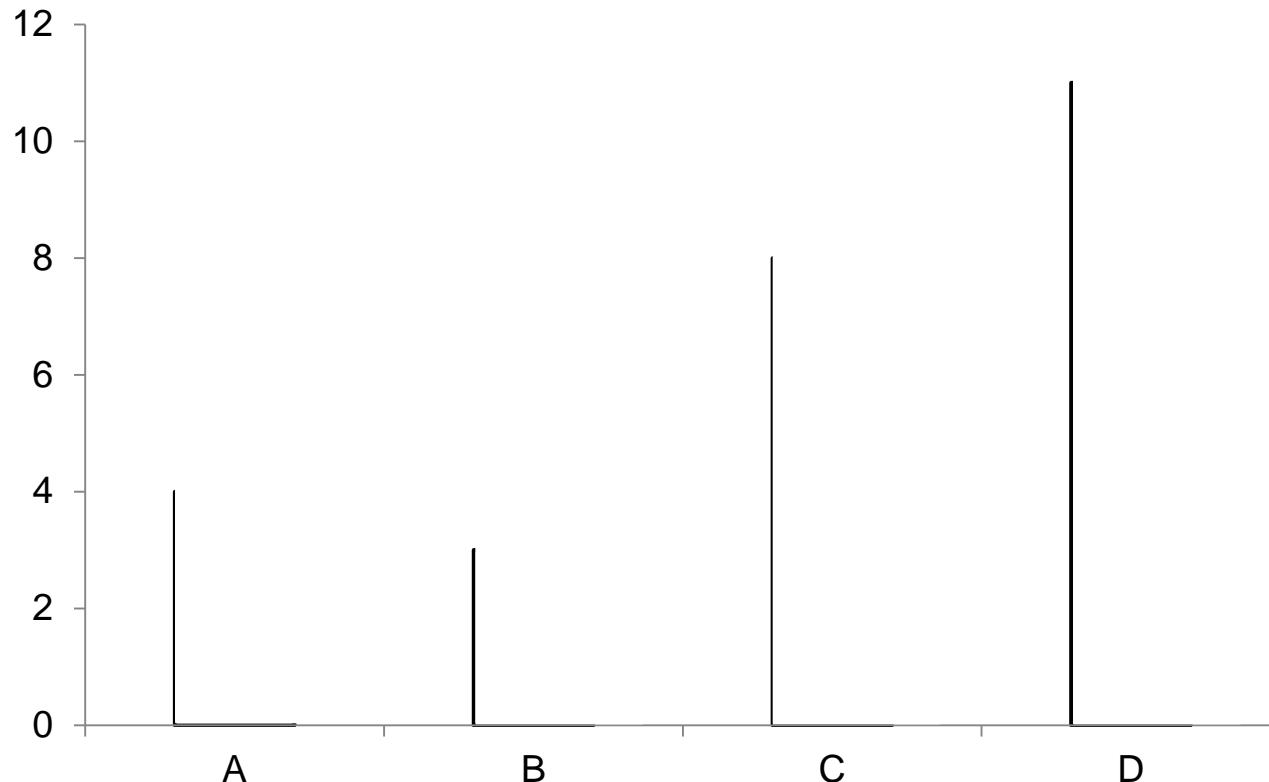

5 Data-Ink Principles by Tufte

1. above all else show data
2. maximize data-ink ratio
3. erase non-data-ink
4. erase redundant data-ink
5. revise and edit

Data-Ink Ratio

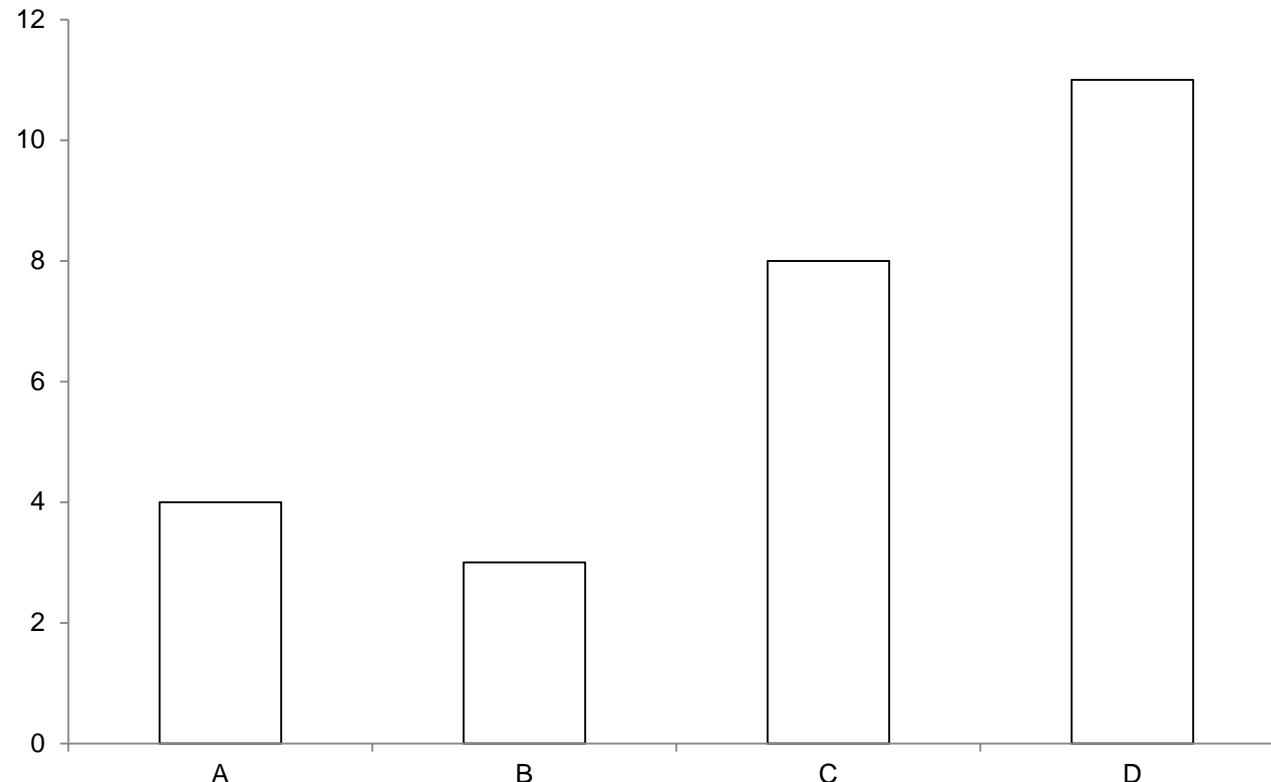

Data-Ink Ratio

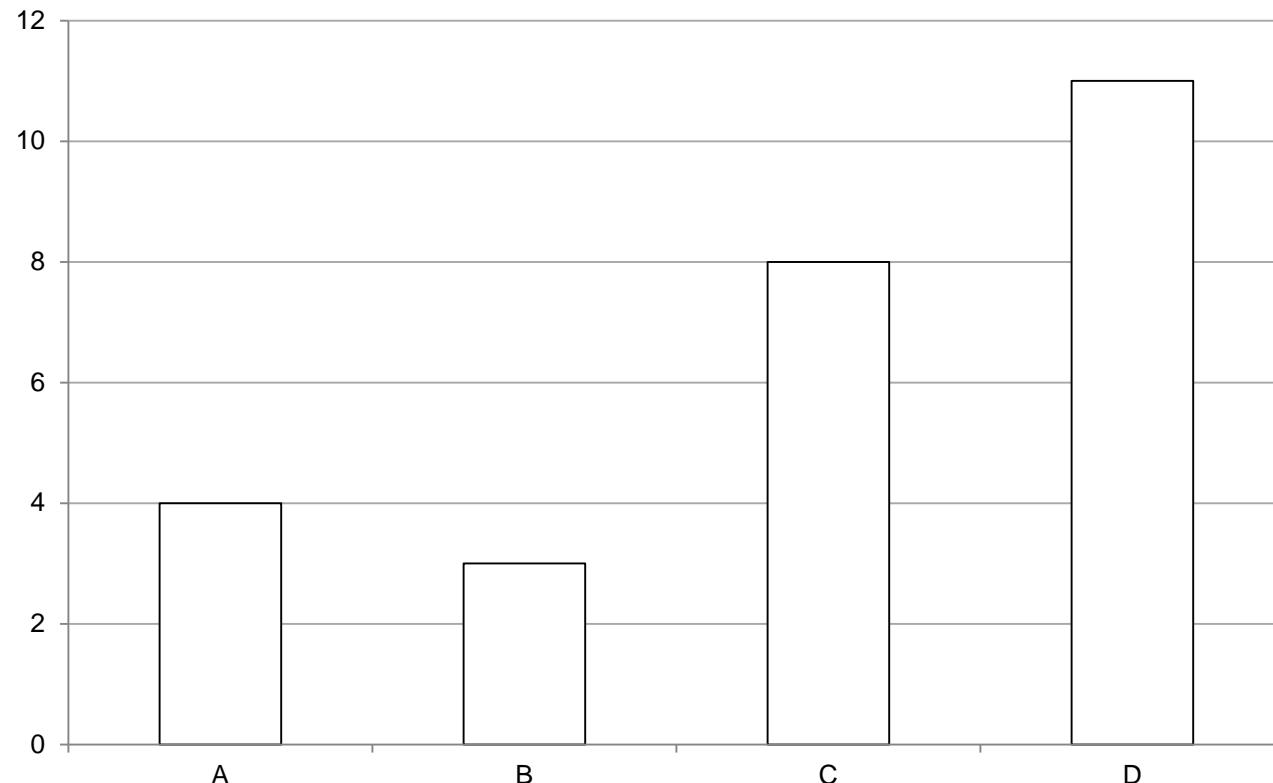

possible Tufte version

Data-Ink Ratio

Chartjunk

“Chartjunk promoters imagine that numbers and details are boring, dull, and tedious, requiring ornament to enliven. If the numbers are boring, then you've got the wrong numbers.”

Edward Tufte [1]

Chartjunk – Different Opinions

“A good approach to information graphics includes an appeal to the reader, immediately followed by a true account of the story... I want to make room for enjoyment, delight, aesthetic appreciation and wit, and a friendly “you can understand this” approach.”

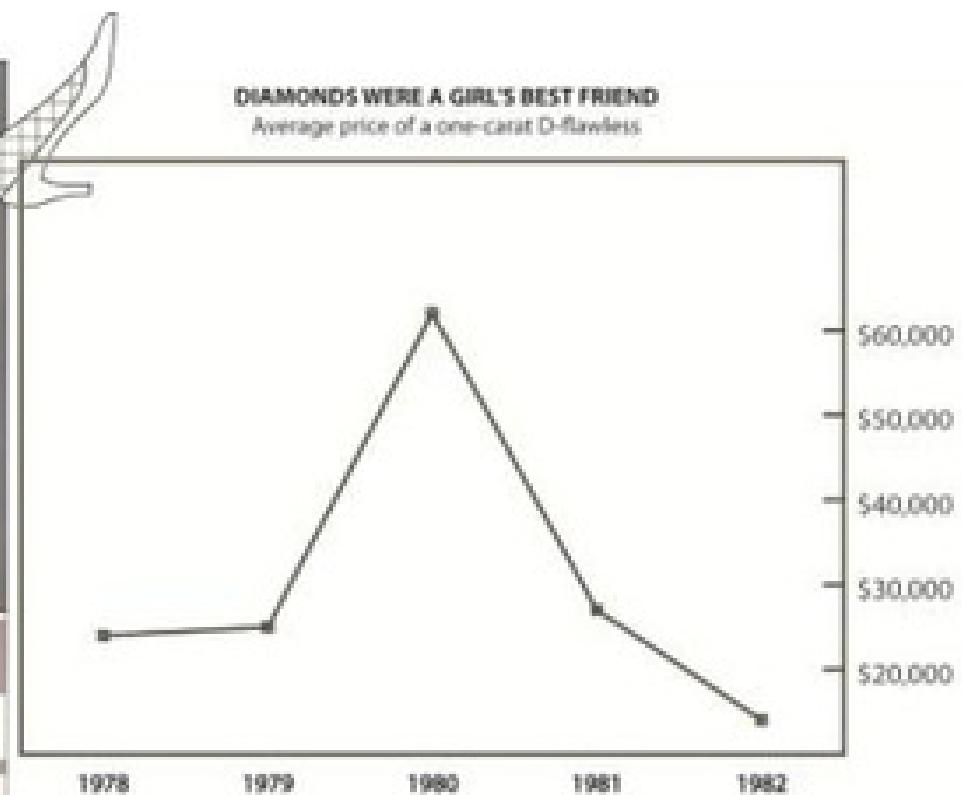

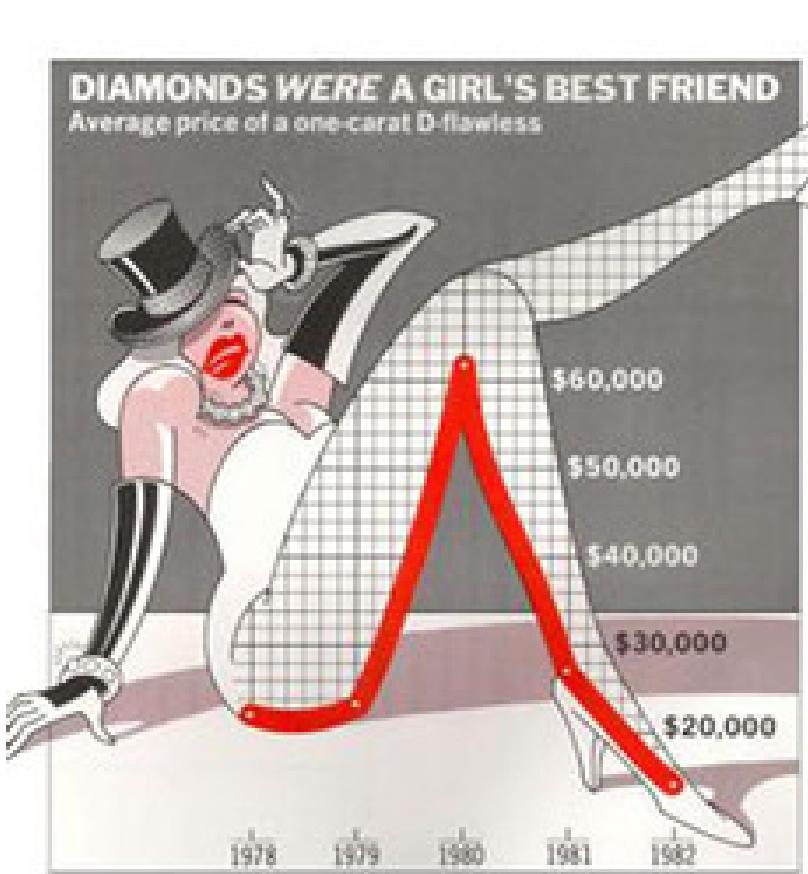

Nigel Holmes [2]

Chartjunk

Nigel Holmes [2]
(Design)

vs

Edward Tufte [1]
(Minimalist)

Bateman et al. [2]

Chartjunk – Pros and Cons

Nigel Holmes

vs

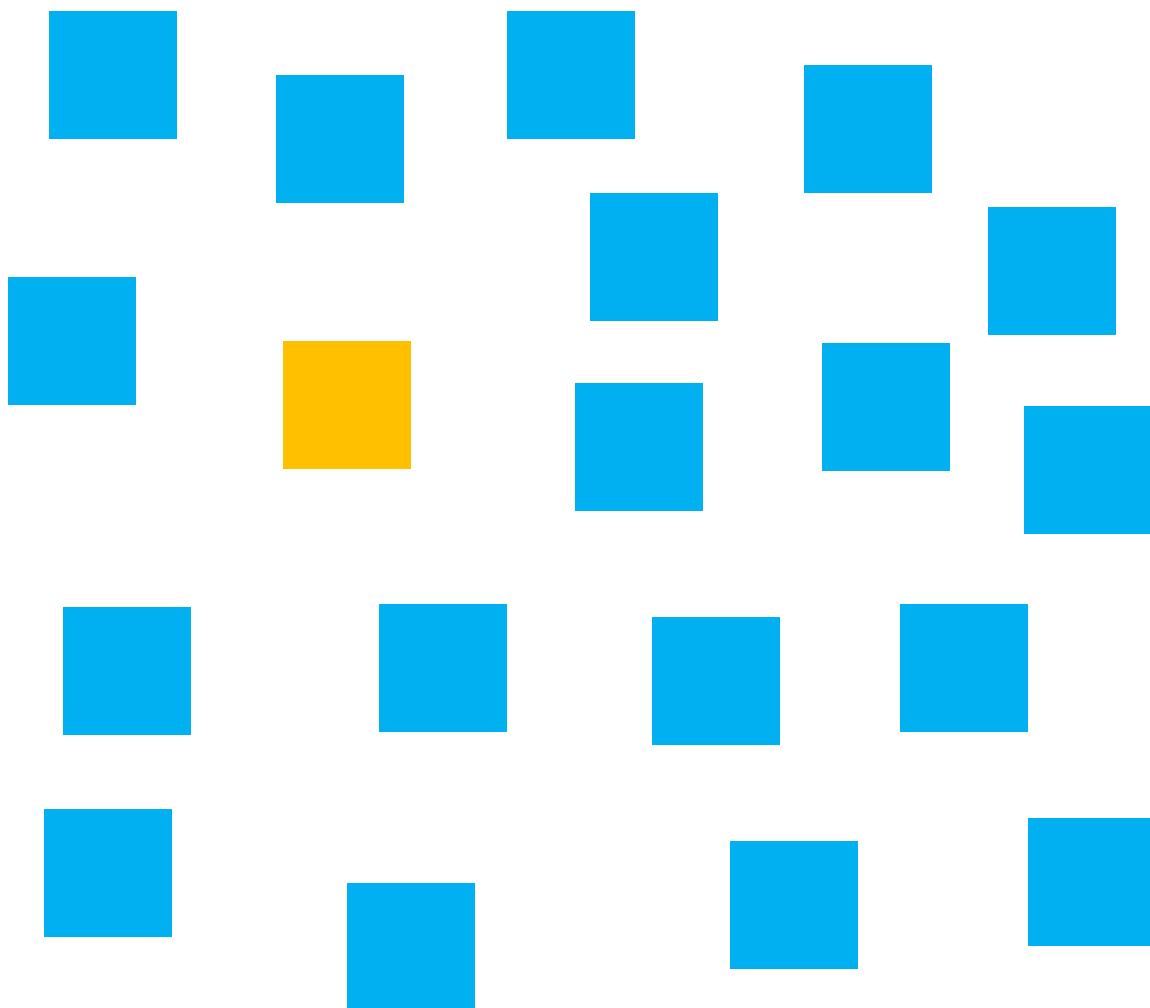

Edward Tufte

- can contain a message
 - aesthetical
 - better memorable
 - ...
-
- objective
 - clear
 - fast to perceive
 - ...
-
- Communicating data ➤ Data analysis

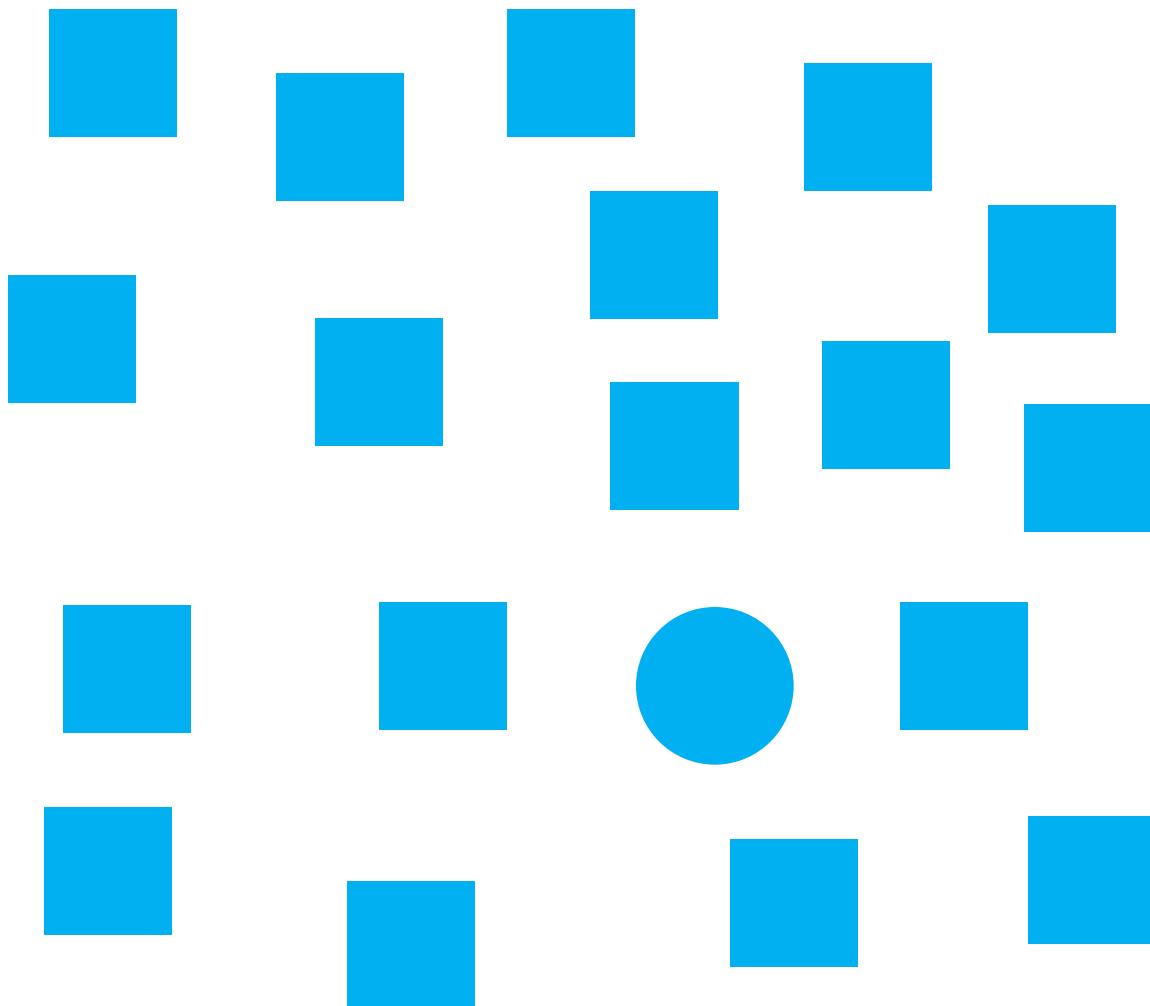

Preattentive Perception

200 – 250 ms

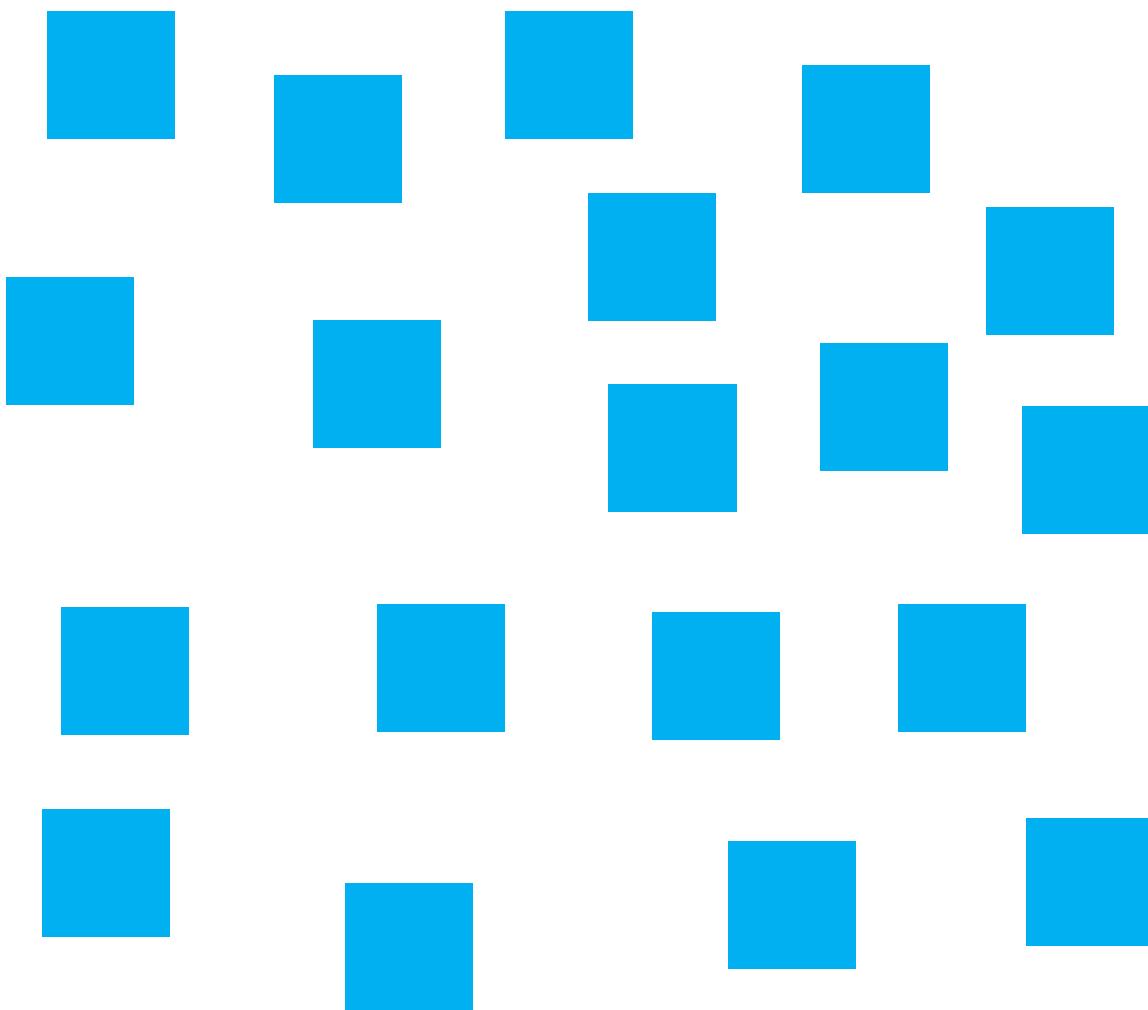

Color pops out

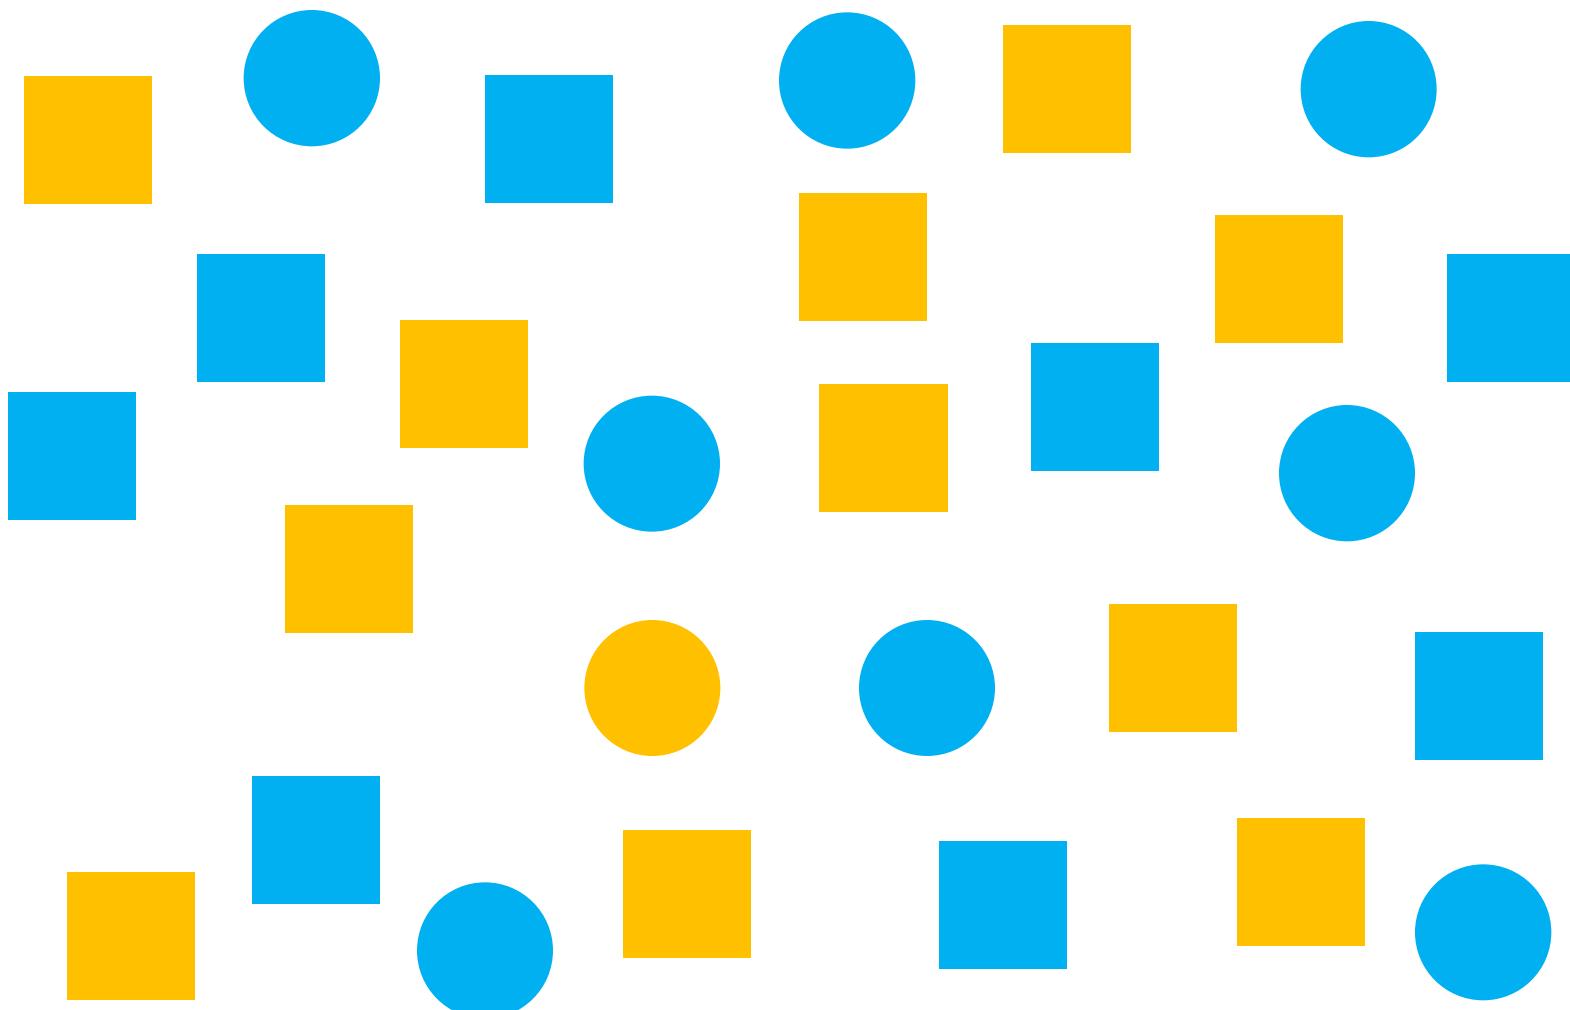

Shape pops out

Flicker pops out

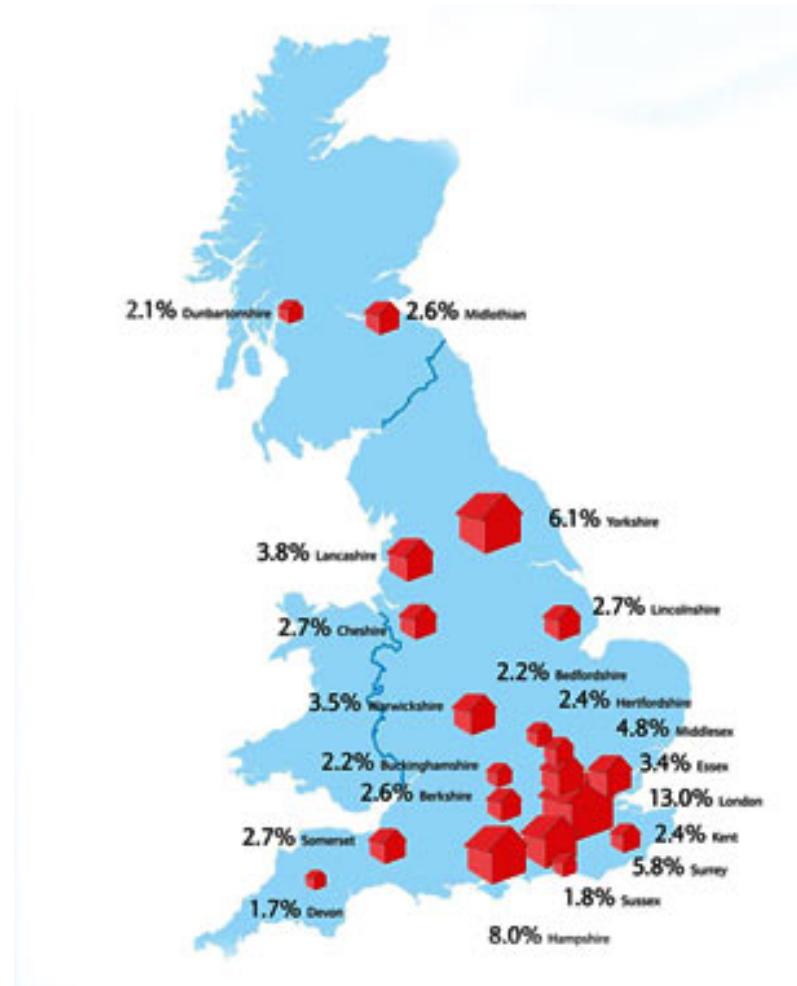

Conjunction does **not pop out**

**Design and preattentive
perception?**

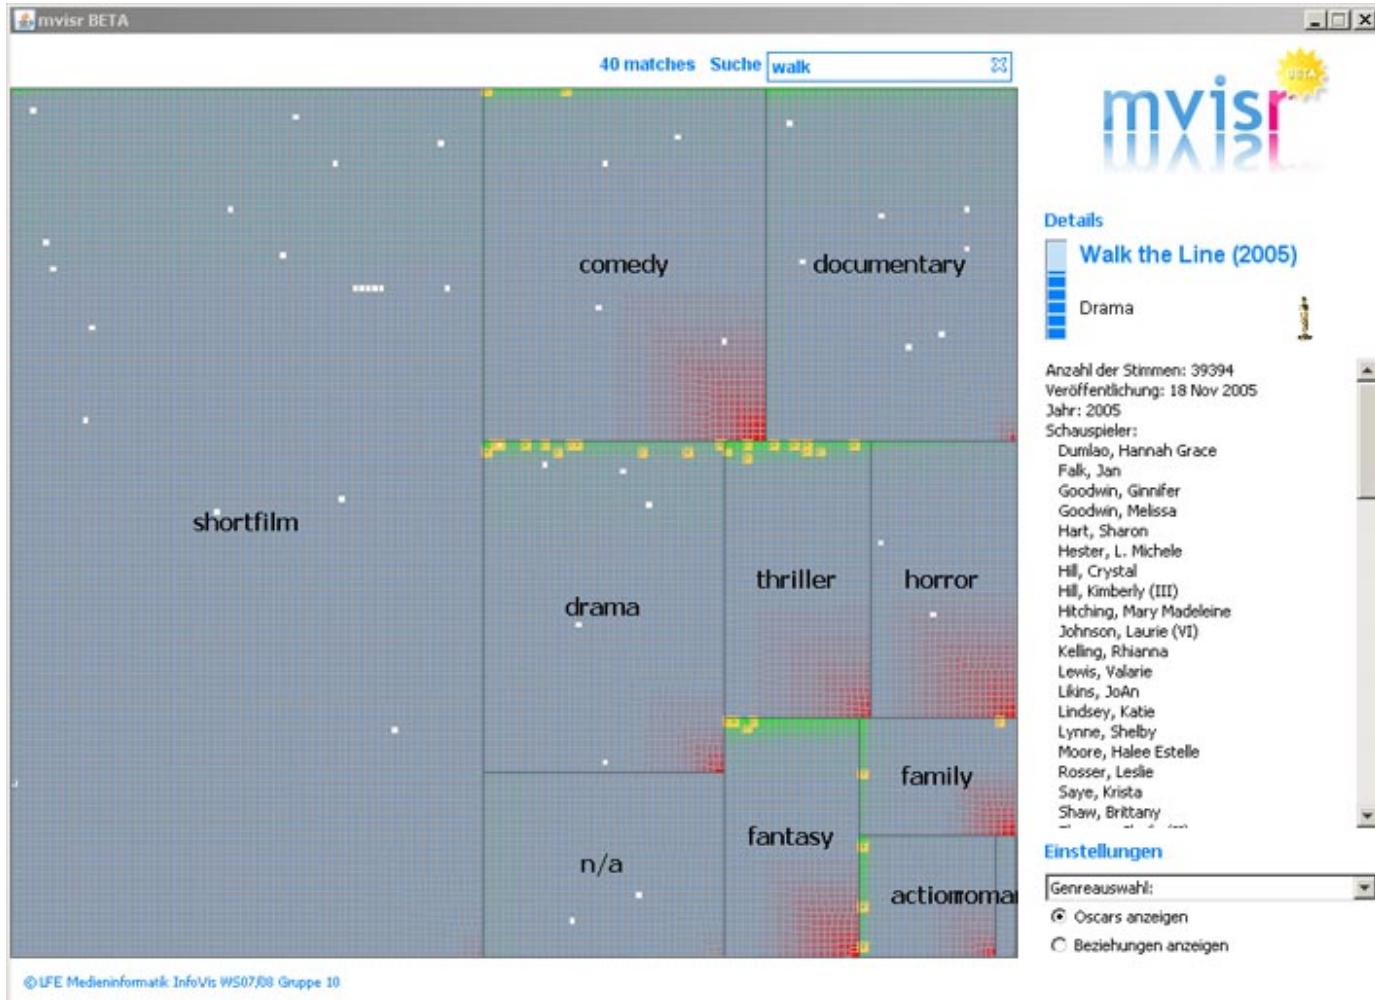

Examples

Wealth distribution in the UK

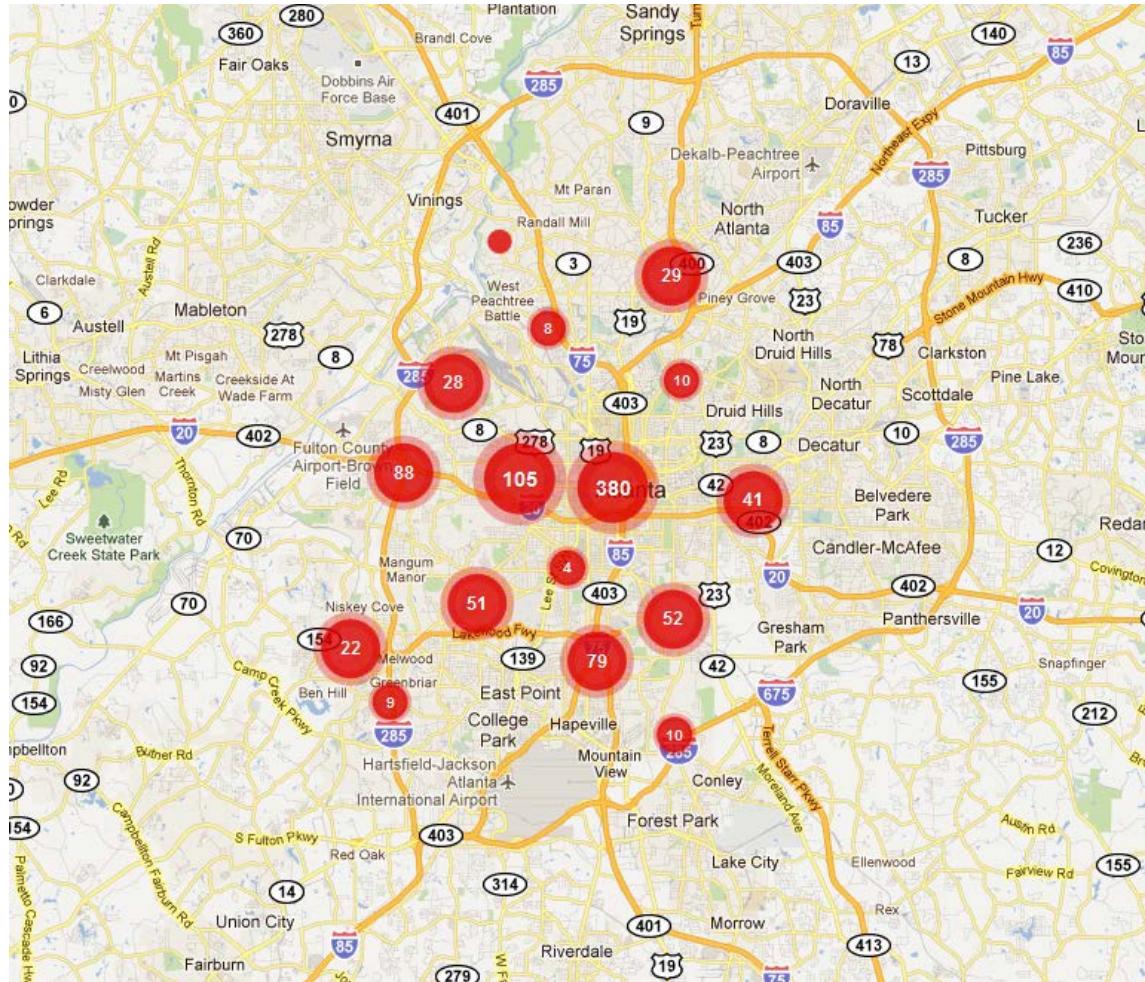

Examples

Movie Visualization

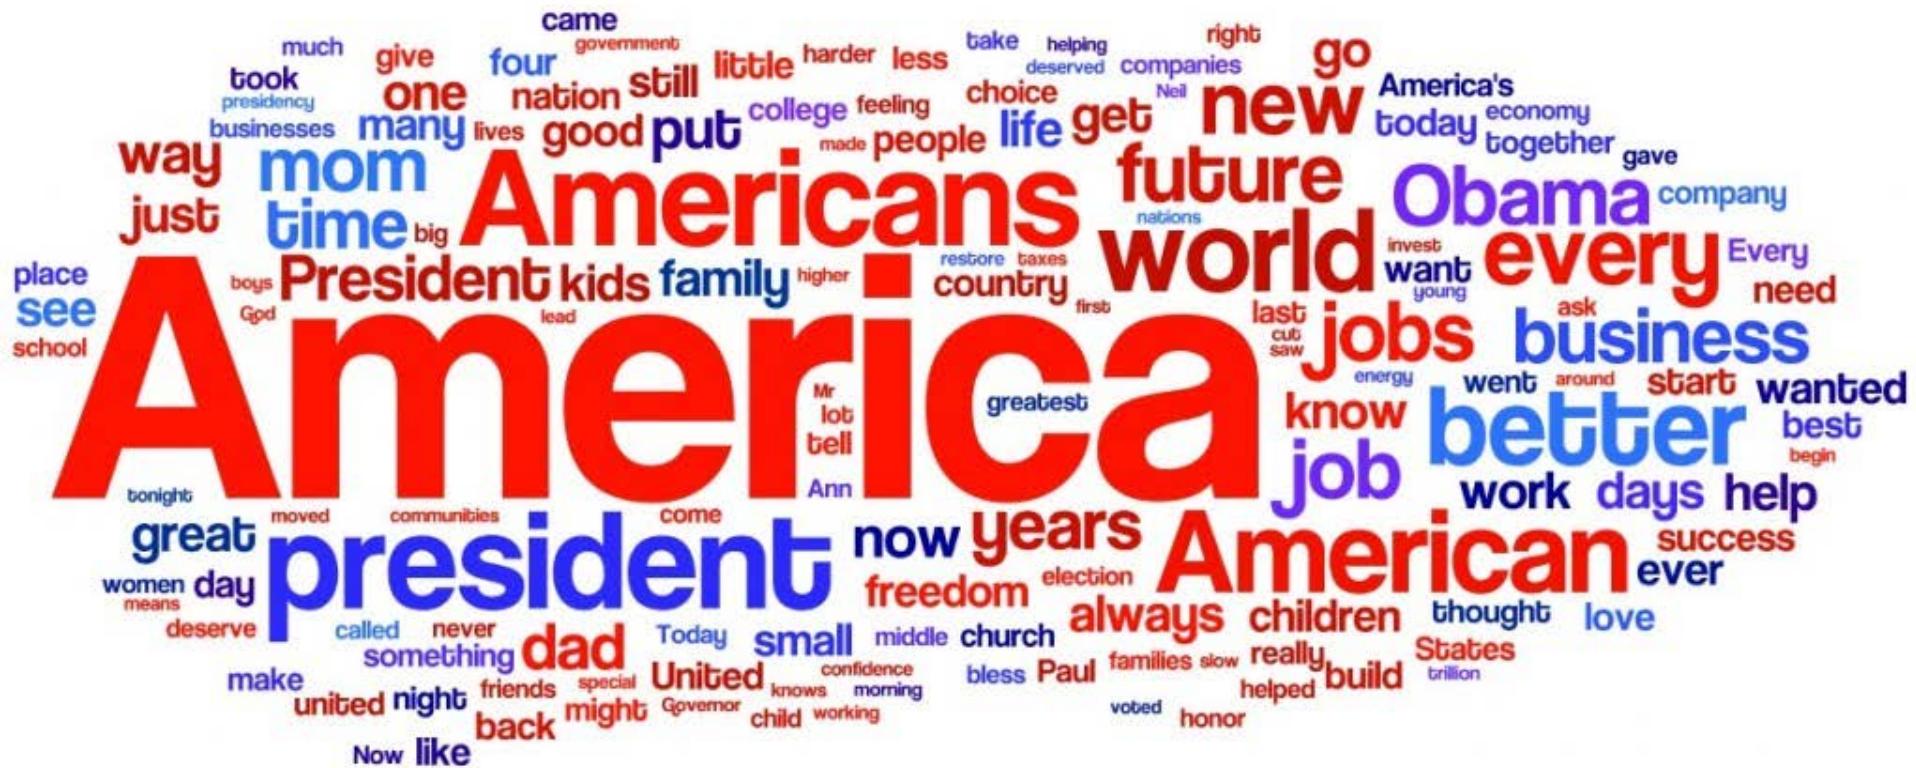

Examples

Crime in Atlanta
